TO THE PROGRESSIVE PRINTER

The contents of the American Specimen Book of Type Styles represent the fruits of the constant policy of the American Type Founders Company to design and manufacture Type Faces and Decorative Materials which broaden the printers' field of profits by thoroughly satisfying the buyers of printing and increasing the use and popularity of printed salesmanship.

THE DECISIVE CRITICS OF TYPE FACES

It may not be proper that we praise the beauty, symmetry, dignity, attractiveness and serviceability of the type designs of the American Type Founders Company; such praise may be suspected of bias, and adds no value to the type faces; but both the American Type Founders Company and the printers must defer to the opinions of the ultimate, decisive critics of type faces — *the customers of the printers.* The verdict of the buyers of printing is indicated by the almost exclusive use in the better class of commercial and periodical printing of type faces originated by the American Type Founders Company. To say that any printed work or advertisement is excellent and attractive is usually equivalent to saying that it is set in type made by the American Type Founders Company.

PROFITABLE *vs.* UNPROFITABLE TYPES

This Specimen Book contains no item which has outlived its usefulness and profitableness. Another specimen book as big as this one might be compiled of type faces which were in regular demand a few years ago, but which cannot now be used profitably. Not the least service the American Type Founders Company has rendered to the printers is that of discarding hundreds of series of type faces which do not conform to the present higher standard of typographic taste which has been created and fostered by the "Originator of Type Fashions."

If original and good type designs do not attract new business to the printer it is waste of time to produce them. If printers were restricted to the use of the old-fashioned type faces current at the beginning of this century the buyers of printing would now, as they did then, restrict their expenditures to the obviously necessary kinds of printing. The great expansion of the printing business began when printed salesmanship was made attractive and dignified and convincing by the original type designs of the American Type Founders Company. The commercial world took up the use of the great dominating type designs with the same alacrity with which it welcomed the telephone as a substitute for the messenger boy, and for the same reasons, better results and more profits. The narrow, old-fashioned superstition that the buyers of printing should be kept in ignorance of type faces is rapidly being superseded by a policy of advertising the printers' chief business-producing asset, well-selected type faces. To buy new type faces for the purpose of retaining, attracting and increasing business is as obviously necessary in the printing plant as a new stock of wares is necessary to maintain the prestige of any other dealer in merchandise. The printer who uses type faces made by the American Type Founders Company ranges himself with a great majority of the successful printers.

Set in Bodoni and Bodoni Bold

TYPE DESIGNING DEPARTMENT

The upper picture on page nine shows a section of the main Type Designing Room, in which the designs of the various members of the great type families are first worked out on paper, and then by ingenious mechanical devices transformed into metal patterns by a method, first used by the American Type Founders Company, which has revolutionized the art of producing patterns and matrices for casting types.

After the patterns are prepared they are used on the Benton Matrix Cutting Machines shown in the lower picture on page nine. These machines cut the matrices into the solid metal with a degree of accuracy impracticable by the hand processes which these machines have made obsolete in the Central Plant. These matrix cutting machines, and the machines for sharpening the cutters and measuring the work, are made and used exclusively by the American Type Founders Company.

The various inventions used in this department have made matrix-making an almost infallible science, where before it was the least scientific of type-making processes. In this connection the fact of real importance to the printer is that these inventions have considerably improved the quality of types, both artistically and mechanically.

TYPE CASTING DEPARTMENT

It would require a fair-sized volume to illustrate and describe all the departments of the Central Plant. We pass with a bare mention the Departments of Mould-making, of Brass Types and of Casting Machine Building and Repairs; the Matrix Vault, the Power House with its Electric Generating Plant, the Metal House, the Chemical Laboratory, the Shipping Department (illustrated on page eleven), and last, though not least, the extensive Specimen Printing Department in which this Specimen Book was printed.

On page ten will be found views of two Type Casting Bays, and a picture of the Barth Automatic Casting Machine made and used exclusively by the American Type Founders Company. There are six of these bays, each a large-sized type foundry in itself, lighted and ventilated on all sides and in the roofs. Each Barth Automatic Type Casting Machine requires electricity for power, gas for melting the metal, cold water for cooling the mould, and cooled air for regulating the temperature; and all the conduits for supplying these forces are under the floor.

In addition to the six Casting Bays, a section of the main floor more than thirty feet wide and extending one-half the width of the front of the building and two-thirds of the length of the building is occupied by various steam and hand casting machines, dressing machines, kerning machines and by various hand processes used in making type.

THE DIVIDING DEPARTMENT

The upper picture on page eleven is a view in the Main Dividing Room, which extends almost the entire length of the building. Above this room there is another Dividing Room of nearly the same extent. The Dividing Rooms are splendidly lighted and systematically arranged to take care of the product of the casting machines in adjoining rooms. Millions of pounds of type are handled here annually.

Versatile Border

Three Point Border No. 44

AMERICAN TYPE FAMILIES

The American Type Founders Company originated the policy of developing its dominating type designs into extensive type families. The printers were quick to appreciate the economy and other great advantages of purchasing related series as compared with the purchase of the same number of unrelated series. The related family series produce harmonious effects and may always be successfully used together in one composition. The addition of another related family series to previous purchases of the same family strengthens, freshens, reinvigorates and adds additional value to the previous purchases. This Specimen Book contains a splendid collection of Type Families and it is the policy of the American Type Founders Company to constantly add to the members of its many successful Type Families.

A COMPENDIUM OF TYPOGRAPHIC STYLE

A large proportion of the series shown in this Specimen Book are displayed in colors, with suitable decorative effects. These compositions are intended to be educational, not only to printers but to their customers. They are not printed so much to please as to profit. The aim has been to make this Specimen Book a gold mine for the printers, knowing that their prosperity is the prime essential to the prosperity of the American Type Founders Company.

The American Specimen Book of Type Styles is expected to be the printers' Typographic Guide Book, a source of profit and inspiration, a chief aid toward achieving good reputation and success in business.

THE CENTRAL PLANT

The major part of the type sold by the American Type Founders Company is made in the Central Plant, photographically illustrated on page eight. This building is entirely devoted to the manufacture of types and brass rules, for which purposes it was carefully and specially designed.

While it is a fact that the Central Plant is the most extensive type foundry in existence, none other nearly approaching it in size, the American Type Founders Company prides itself less on this fact than on the fact more important to its customers, that in every detail, small and large, the machines, the tools, the gauges and the manufacturing processes are perfected to a degree unknown in the typefounding art as recently as ten years ago. Types were never before made so accurately or of such good quality as those now produced by the American Type Founders Company.

DISTRIBUTION OF PRODUCT

The staff and working force at the Central Plant do not deal directly with the buyers, but with the various Branches of the Company doing business in the various locations pictured on the four pages in this section of the catalogue and with agents in Europe, Canada, Mexico, Cuba, Central and South America and other countries. In each of these Branch Houses all the resources of the American Type Founders Company are available. No printer is at any disadvantage on account of location. At no time have printers been afforded such perfect facilities.

PROFITABLE FOR PRINTERS

Study This Book—It is a Gold Mine *for the* Progressive Printer

IT IS MOST PROFITABLE and important that a PRINTER should acquire a thorough knowledge of Good Type Faces. Such knowledge is gained only by a careful study of Good Type Faces, and never before has there been such an opportunity for the effective study of Good Type Faces as is afforded by this book.

Study this Book page by page. It is not a mere price list, but a veritable Encyclopedia of Typographic Styles. Here are the Type Faces which have established the typographic fashions, and also beautiful examples of how these Type Faces can be used to please the Printer's Customers. These examples are not shown in this book to beautify it, but to demonstrate to Printers that Extra Profits may easily be obtained if the printing is done with Type Faces of Extra Quality in their Designs, which impart Extra Quality to the Printing.

Study this Book in the Interests of your own Customers.

After all is said and done, the Printer's work is judged chiefly by the Type Faces used in it. A Good Type Face may make poor paper and cheap inks passable, but the best qualities of papers and of inks are incapable of giving even a semblance of quality to Printing executed with Type Faces of inferior design.

Show your customers these beautiful Examples of Printing with Good Type Faces. These models will demonstrate to them the superior business-attracting power of Printing done with Good Type Faces, and persuade them to use More Printing and pay Better Prices.

Study *this* Specimen Book of Type Styles with the sole object of making it Profitable to yourself.

Why Buy Old Type Faces When New Ones Cost No More?

IN this American Specimen Book of Type Styles are shown a great many new and beautiful type faces not heretofore printed in specimen book form. The American Type Founders Company's world-wide reputation for originality in its selection of popular and stylish type designs remains unchallenged, and the foremost printing offices of the world are now rapidly equipping with its latest and best products. The question now arises: *"Why buy Old type faces when New ones cost no more?"* Why continue the use of old-fashioned type faces when new faces make your work more attractive: when the new faces are carried in stock for prompt delivery, while the old faces are invariably cast to order, necessitating delay and increased cost? Let the printer seriously consider this and realize how much more profitable he could make his business were he to discard the old, worn-out type and select his requirements from the many useful and profit-making series of American type shown in this specimen book. Keep the plant young through infusion of variety.

American Type Founders Company

ORIGINATOR OF TYPE STYLES

The American Type Founders Company is the largest manufacturer in the world of *Type, Borders, Ornaments, Brass Rule and Brass Type, etc.*, as well as the most important dealer in:

Job Type	Brass Galleys
Body Type	Galvanized Galleys
Borders	Zinc Galleys
Ornaments	Special Galleys
Spaces and Quads	Leads and Slugs
Cast Cuts	Copper Thin Spaces
Cast Initials	Electric Welded Chases
Brass Rule	Bright Steel Chases
Brass Corners	Radio Iron Surfaces
Brass Leads	Steel Furniture
Brass Slugs	Iron Furniture

The above list comprises only a few of the many products sold by this Company to printers throughout the world. The variety and extent of its manufactures is not equaled by any other type foundry and none can render as efficient service

AMERICAN TYPE FOUNDERS COMPANY

Set in Cheltenham Oldstyle Condensed and Cheltenham Italic

Typotect Border

The American Type Founders Company in addition to manufacturing many of the prime essentials required in the art of printing, is in the best possible position to supply *Everything for the Printer*, as it represents, among others, the following manufacturers, who rank highest in their special lines:

CYLINDER PRESSES
- Premier Printing Press Co.
- Whitlock Printing Press Co.
- Challenge Machinery Co.
- Cranston Printing Press Co.
- A. T. H. Brower Co.

JOB PRESSES
- Chandler & Price Co.
- John Thompson Co.
- Peerless Printing Press Co.
- National Machine Co.
- Golding Manufacturing Co.
- Boston Printing Press Co.

STAPLING MACHINES
- Boston Wire Stitcher Co.
- Acme Staple Co.
- Samuel J. Yarger

PRINTERS' WOOD GOODS
- Hamilton Manufacturing Co.

PAPER CUTTERS
- Chandler & Price Co.
- Oswego Machinery Co.
- Challenge Machinery Co.
- Peerless Printing Press Co.
- Paul Shniedewend & Co.

ROUND CORNERING MACHINES
- Southworth Machinery Co.
- Samuel C. Tatum Co.
- F. P. Rosback Co.

PUNCHING MACHINES
- Southworth Machinery Co.
- Samuel C. Tatum Co.
- F. P. Rosback Co.

PERFORATING MACHINES
- Southworth Machinery Co.
- Samuel C. Tatum Co.
- National Machinery Co.
- F. P. Rosback Co.

WIRE STITCHERS
- Boston Wire Stitcher Co.
- F. Wesel Manufacturing Co.
- F. P. Rosback Co.

PROOF PRESSES
- A. F. Wanner Co.
- Eastern Sales Co.
- Chandler & Price Co.
- Challenge Machinery Co.
- F. Wesel Manufacturing Co.
- Paul Shniedewend & Co.

It is impossible to enumerate here many other machines and supplies in which we are extensive dealers. It will at all times afford us pleasure to furnish details and prices of any appliances manufactured, if you will let us know your requirements

AMERICAN TYPE FOUNDERS COMPANY

EFFICIENCY PRINTING PLANTS

To Those about to Equip New Plants or Re-Equip Established Plants:

The American Type Founders Company has a staff of experienced Printing Plant Efficiency Engineers, at 300 Communipaw Avenue, Jersey City, N. J., for the purpose of laying out complete printing plants or departments of printing plants with the object of securing the greatest Efficiency in Operation and the greatest Economies in Space and in Production.

Our Efficiency Engineers are experienced practical printers, and also fully conversant with the details of photo-engraving, electrotyping and stereotyping, and competent to advise in the selection and the arrangement of plants for these processes, as well as composing rooms.

WHEN SPECIALIZATION OF PRINTING PLANTS BECOMES PROFITABLE

When the work done in any printing plant is of a special character, and is done in large enough quantities to bring it into the class of regular manufacturing, the time has arrived when the subject of specialization of equipments to facilitate and to economize production can be profitably considered.

Nearly all of the larger periodical and newspaper plants and most of the commercial plants, especially the self-contained plants (which combine engraving and electrotyping with printing), are in the class which needs the services of our Expert Designers and Efficiency Engineers.

NEW PRINTING EDIFICES

The time to call in our Efficiency Engineers is when the architect is ready to commence his work. It is not to be expected that architects, however eminent, have sufficient knowledge of printing practice to enable them to plan the work rooms so that they will afford all possible economies in handling the work from start to finish. A thorough knowledge of all details of all the printing operations is required to enable one to properly locate and advise upon the construction of the stairways, elevators, dummy elevators, copy chutes, automatic copy carriers, windows, skylights, ventilators (to maintain the necessary equable temperature in pressrooms as well as to provide satisfactory sanitary conditions), water inlets and outlets, gas inlets, conduits for electric wiring, radiators, etc. Our Efficiency Engineers work in connection with the architects, and the more eminent the architect the more ready he is to welcome such assistance. A large proportion of factory buildings are put up in advance of knowing for what purposes the tenants will use them. In

such instances one can only make the best of what is provided by the landlord; but when a building or part of a building is constructed specially for printing purposes there is an opportunity for incorporating in the building very important and constant economies or (as too often happens) for establishing decidedly uneconomical conditions equally constant.

SPECIALIZED EQUIPMENTS FOR PLANTS THAT ARE PERMANENTLY ESTABLISHED

When a printing business has reached the manufacturing stage (whether of periodicals, newspapers, books or commercial work) it has usually proved that it is established on foundations which insure its permanency. Its every purchase should then be made with a view to the longest service and the greatest efficiency. In the composing-room no equipments are so economical as those well made in iron and steel, which are practically indestructible, and preserve their style and finish and dignity while being handed down from one generation to another.

ECONOMY

Modern buying is advancing from the effort to cheapen to the demand for greatest value. Permanency is coming to be recognized as a chief consideration in purchasing equipments. Hence the present tremendous rebuilding of railroads and business edifices, the sole motive for which outlay is to realize permanent economies. The larger printing plants cannot be fully efficient with ready-made composing-room equipments designed for the average plant. Our Specially Designed Iron and Steel Composing Room Equipments are practically indestructible and economize in space and time.

EFFICIENCY

Labor Cost is increasing, and will inevitably continue to increase. The apparatus for doing business is constantly becoming more intricate and expensive. One field of economy still remains uncultivated: the Increase of Efficiency in the use of business apparatus—men, equipments and machines—by the elimination of Waste Time, Waste Movements and Waste Space. Our efficiency department designs and manufactures Equipments for Composing Rooms which prevent such waste. It plans and installs Economies, as distinguished from those methods which perpetuate Inefficiency.

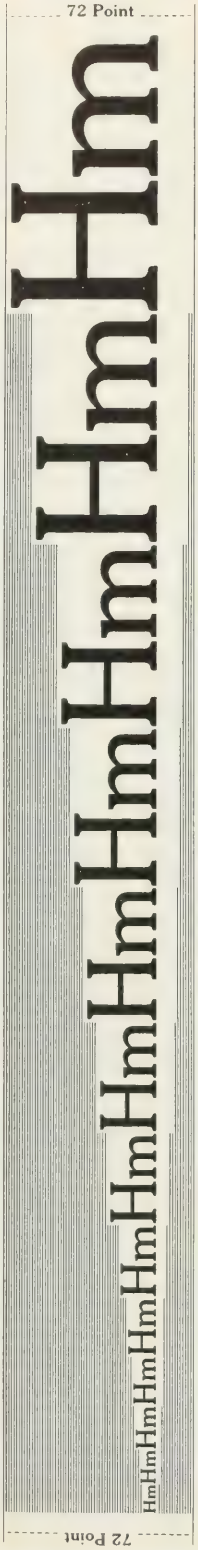
AMERICAN TYPE FOUNDERS COMPANY

NUMBER THREE HUNDRED COMMUNIPAW AVENUE

JERSEY CITY, NEW JERSEY

Set in Clearface, Clearface Bold and Clearface Bold Italic



AMERICAN TYPE SYSTEM

Point Adjustments of Body, Widths and Line

AMERICAN POINT BODIES

American types are manufactured accurately on interchangeable point bodies, and so are the brass rules, leads and slugs, metal furniture and cast cuts shown in this catalogue.

AMERICAN POINT SET

To facilitate accurate and easy justification, American types are cast to widths that are multiples of a typographic point or fractions thereof.

AMERICAN POINT LINE

I. **American Common Line**—the line common to the majority of faces.

II. **American** TITLE LINE—chiefly used for Title faces.

III. **American** *Script Line*—embraces Script and other faces with long descenders.

The **American Lining System** is the perfection of the systems adopted by the type founders of this country. The use of the American Lining System is here exemplified in the use, ***without justification,*** of different type faces cast on the **American Common Line**—a feature that must commend itself to **Printers** for its simplicity and **practical use.**

Every face on **Common Line** will line at the bottom with all faces cast on the same body; and by using point leads each size will line with all other sizes cast on either ***Common, Title or Script*** Lines.

The example on this page illustrates practically the 6, 8, 10, 12, 14, 18, 24, 30, 36, 48, 54, 60 and 72 Point sizes of Cheltenham Medium aligned with point justification. To better illustrate the system, one-point brass rule was used in aligning the thirteen sizes—each fine line representing a one-point lead.

American Type Founders Co.

ORIGINATOR OF TYPE FASHIONS

Important to Buyers

The Demand Determines the Supply

THE progressive printers have in reality selected the type faces and decorative materials shown in this Book. Here and there are printers who for one reason or another cling to old-fashioned job type faces, now rapidly becoming obsolete, but the demand for the old-fashioned type faces is so small and dwindling that they cannot profitably be carried in stock.

There is no kind of printing that cannot be done better with the newer progressive type faces than with old-fashioned job type faces.

Printing done with the fashionable, popular and progressive type faces shown in this Book is more valuable to the printers' customers than if set in type faces which are old-fashioned relics of the past

American Type Founders Company

ORIGINATOR OF TYPE STYLES

SIZES OF MINIMUM WEIGHT FONTS

Weight Fonts of caps, lower case, figures and points, with small caps, if made, of one body, face and line ordered at one time cast to regular scheme.

5 lbs. and multiples, 3 to 4½ Point inclusive.
10 lbs. and multiples, 5 and 5½ Point.
20 lbs. and multiples, 6 to 18 Point inclusive.
25 lbs. and multiples, 20 to 36 Point inclusive.
50 lbs. and multiples, 42 to 72 Point inclusive.
75 lbs. and multiples, 84 to 96 Point inclusive.
100 lbs. and multiples, 120 and 144 Point.

Weight Fonts of Title line faces, caps, figures and points, of one body, face and line, ordered at one time, cast to regular scheme.

5 lbs. and multiples, 4 to 5½ Point inclusive.
10 lbs. and multiples, 6 to 18 Point inclusive.
15 lbs. and multiples, 20 to 36 Point inclusive.
20 lbs. and multiples, 42 and 48 Point.
25 lbs. and multiples, 54 to 72 Point inclusive.
40 lbs. and multiples, 84 and 96 Point.
50 lbs. and multiples, 120 and 144 Point.

Items Covered by Table 5

All fonts and sorts of Quads (em and thicker) excepting Script Quads.

Regular stock, point body, 1, 2 and 3 em Quads (high or low) of one body, ordered at one time, assorted sets or separately.

Larger than 14 Point at same price per pound as 14 Point.

Subject to Minimum Sort Rules on page 41.

Body Type is put up in packages of the following approximate weights. This table applies only to faces shown on pages 45 to 143.

Table 6

			LB	OZ	LB	OZ	S	OZ	LB					
25 lbs.	2	8	1	8	1	1	1	0	14	11	2	8	2	8
50 lbs.	5	0	1	8	2	2	2	0	29	6	5	0	5	0
100 lbs.	10	0	3	0	4	4	4	0	58	12	10	0	10	0

Where the face does not show Small Caps, the weight of the Cap package is increased.

Weight fonts of other faces are put up to count schemes and the weight of the separate packages of Caps, lower case, figures and points vary with each face.

Body Type Italic is put up in small fonts of the following approximate weights and is sold at prices given in table 2:

4 to 7 point inclusive 2½ pounds and multiples.
8 to 18 point inclusive 5 pounds and multiples.

MINIMUM SORT RULES—TYPE

The minimum Sort Charge for one body, face and line is 60 cents. For a sort order which includes spaces or quads of the same body as the letter, the charge shall be for the weight ordered at the proportionate pound price, but in no case shall the minimum charge be less than 60 cents.

No sort order will be filled for a less amount per character (or set of spaces or quads) than—

Two ounces of each character in bodies 3 Point to 5½ Point inclusive; 4 ounces of each character in bodies 6 Point to 18 Point inclusive; 6 ounces of each character in bodies 20 Point to 48 Point inclusive; 8 ounces of each character in bodies 54 Point and larger.

OLD METALS TAKEN IN EXCHANGE

Old type made by regular typefounders; printers' old brass; electros, stereos, leads and slugs; metal furniture; linotype slugs and Lanston type, if packed separately, unmixed with other metals (particularly zinc), in their original manufactured condition (not melted down), and shipped prepaid or delivered to nearest selling branch or foundry will be accepted at current prices in exchange for new type and other printing materials at our regular discounts as advertised by this Company from time to time.

As old metal cannot be easily identified when several shipments arrive at about the same time, it is necessary to put shipper's name on each package, and advise us promptly of shipment, sending us a copy of freight receipt showing number of boxes or other packages, the gross weight thereof and a memorandum giving exact weights of each class of metal.

Stereotype plates and bases made by The American Press Association, Newspaper Unions or similar manufacturers, being the property of these concerns, are not accepted.

ACCENTED LETTERS FOR BODY AND JOB TYPE

For list prices of fonts of accented letters for various languages see page 887.

Accented letters, when ordered with the font, whether for body or job faces, are sold at the same price per pound as the font.

A table of all accents regularly made, with their designating numbers, is shown on page 886.

HOW TO BUY TYPE ADVANTAGEOUSLY

By ordering in regular fonts (or regular parcels of weight fonts) buyers will get quick delivery and the lowest prices.

Orders for less than fonts (or regular parcels of fonts) and for type to be put up to irregular schemes or assortments are classified as Sort Orders, and are usually cast to order, involving delay and sometimes necessitating billing at higher prices.

The lowest prices for Job Type are obtained by buying in Weight Fonts in conformity with sizes of Minimum Weight Fonts at the top of page 40.

The lowest prices for additions to body type fonts are obtained by buying the regular sections of regular fonts in conformity with Table 6, page 40.

When prices are graded according to quantities ordered at one time, it is important to remember that the actual weight ordered is the factor determining the list price. If, for instance, a 500-pound font is ordered, and the weight is diminished by omitting from the order any section of the 500-pound font, the rate for 500 pounds does not apply, unless other sections of fonts of the same body, face and line are included as substitutes for the sections omitted.

In ordering additions to fonts to match type in use it is necessary to send a cap H and lowercase m (selecting letters that are least worn), in addition to stating (where possible) the correct name and size of face and the name of the manufacturer of the type ordered. Omission to send samples may make it necessary to hold order while request to send samples is sent to customer.

It is important in ordering to use the exact name of type as printed in specimen books, giving name and date of specimen book and page on which the type is shown. So simple a change as ordering "Gothic Condensed" when the printed name is "Condensed Gothic," or the omission of the correct number may involve uncertainty and delay.

If any part of an order is required more urgently than the balance of the order, that fact should be stated, for sometimes an unimportant item, which may have to be made to order, may delay delivery of the items urgently needed.

Customers are usually in a better position to select the manner and route of shipping their orders, and can frequently effect economies of time and expense by adding shipping directions to their orders. Small quantities shipped by freight frequently cost as much or more than if shipped by express, are liable to delay and are frequently lost.

Estimates of cost of printing plants are furnished in detail upon request, but it is not possible to make an intelligent estimate unless an approximate idea of the amount the inquirer wishes to invest in his enterprise is stated, and also the nature of the work to be produced.

AMERICAN TYPE FOUNDERS COMPANY

BODY TYPES

Announcement

Pages 44 to 144 show specimens of a selection of the best Modern and Oldstyle Body Types made by the American Type Founders Company and Inland Type Foundry. This selection covers every requirement of book, newspaper and general printing offices. The specimens are shown in various ways for the buyers' convenience.

First: Specimens by sizes in single lines of all series to permit ready comparisons of width, color and design.

Second: Specimens by sizes in paragraphs of series to permit of more critical comparison of mass or page effects.

Third: Specimens in large paragraphs arranged in series, to facilitate ordering a suitable gradation of sizes after the series has been selected.

INDEX

Synopsis of Lining Modern Roman Body Type Faces	44, 45
Synopsis of Lining Oldstyle Body Type Faces	96, 97
Lining Modern Roman Body Type Faces, showing sizes	46-59
Lining Oldstyle Body Type Faces, shown by sizes in series	98-109
Lining Modern Body Type Faces	60-95
Lining Oldstyle Body Type Faces, shown in series	110-143

Important Notice

To prevent confusion of identical numbers heretofore used by both this and other type foundries to identify body type faces, the numbers 570 have been added to the old numbers used by the Inland Type Foundry. Thus, former No. 10 of the Inland Type Foundry is now No. 580, and former No. 2 is No. 572. The following is a list of changes in numbering body type faces originated by the Inland Foundry.

Inland Oldstyle No. 9 now No. 579 — Inland Roman No. 20 now No. 590
Inland Oldstyle No. 11 now No. 581 — Inland Roman No. 26 now No. 596
Inland Oldstyle No. 13 now No. 583 — Inland Roman No. 29 now No. 599
Inland Oldstyle No. 16 now No. 586

4 Point Century Expanded

WHEN, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new govern*ment, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to*

WHEN, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it and to institute *a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will*

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government and to provide new guards for their future security. Such has been the patient sufferance of these colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having, in direct object, the establishment of an absolute tyranny over these States. To prove this, let facts be submitted to a candid world. He has refused his assent to laws the most wholesome and necessary for the public good; he has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and, when so suspended, he has utterly neglected to attend to them; he has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature; a right inestimable to them, and formidable to tyrants only; he has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures; he has

OPTIMISM KEYNOTE OF THE REALTY BOARD

PREDICTIONS FOR A BRIGHT FUTURE FEATURE OF EAST GALESBURG ASSOCIATION'S FIRST BANQUET

Bright predictions for a successful future featured the first dinner of the East Galesburg Board of Brokers, which includes the real estate operators of the city, at French's, East Galesburg, on Saturday night. Terence L. Upton, county tax commissioner, was toastmaster, and boxes with a "lots for sale" sign were souvenirs. Judge Edward E. Socem and several other prominent men joined the East Galesburg officials in felicitations to the real estate men. About 200 men and women enjoyed the function.

Mr. Upton announced that Assemblyman John B. Green, of East Galesburg, had introduced a bill that, if enacted into law, will provide legal authority for collecting real estate agents' commissions. The measure was drawn by Jeremiah I. Gaffney, attorney for the board, and its passage will be urged by the brokers. Mr. Upton also stated that the board will be incorporated at a meeting on Thursday night and an effort will be made to collect a fund for exploiting in systematic fashion the manifold advantages of

REBSAN CALLS PARTY TO AID THE INSURGENTS

GLINWOLD LOOMS AS DEMOCRATIC CHOICE—P. O. G. INSURGENT PLAN FAVORS GRIGSON

REPUBLICANS READY TO JOIN TO ELECT A CONSERVATIVE DEMOCRATIC MEMBER

Albany, March 31.—Although Murray legislative leaders stoutly maintain to-night that they will force the selection of a United States Senator to-morrow, political experts at a late hour say: "All combinations are shattered. There can be no election unless Murray accepts one of the men demanded by the insurgents. And he

Exasperated by George F. Hoppe's drubbing of Judge Thomas I. Cahill, whom Murray sought to put through the machine caucus to-day, Senators Norman and Stroub, and Democratic Floor Leader Schill of the Assembly, are awaiting telephone orders from their chief as to whom next to give a trial heat.

Glinwold looms up as the probable solution of the Senatorial tangle.

Samuel Smather's name was tried on the McMullen insurgents late to-night by the Murray directors. It was added to the list of ten being talked over by the Murray leaders and the McMullen insurrectos.

The insurgents will have it in their power to-morrow to break the dead-

Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government and to provide new guards for their future security. Such has been the patient sufferance of these colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having, in direct object, the establishment of an absolute tyranny over these States. To prove this, let facts be submitted to a candid world: He has refused his assent to laws the most wholesome and necessary for the public good; he has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and, when so suspended, he has utterly neglected to attend to them; he has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation, in the legislature; a right inestimable to them, and formidable to tyrants only; he has called together legislative bodies at places unusual, uncomfortable, and far distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures; he has dissolved representative houses repeatedly, for opposing, with manly firmness, his invasions on the rights of the people; he has refused, for a long time after such dissolutions, to cause others to be elected; whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise; the state remaining, in the meantime, exposed to all the danger of invasion from without, and convulsions within; he has endeavored to prevent the population of these States; for that purpose, obstructing the laws for naturalization of foreigners, *refusing to pass others to encourage their migration hither, and raising the conditions of new appropriations of lands; he has obstructed the administration of justice, by refusing his assent to laws for establishing judiciary*

We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it and to institute a new government, laying its foundations on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government and to provide new guards for their future security. Such has been the patient *sufferance of these colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present King of Great*

10 Point Bodoni

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government and to provide new guards for their future security. Such has been the patient sufferance of these colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having, in direct object, the establishment of an absolute tyranny over these States. To prove this, let facts be submitted to a candid world: He has refused his assent to laws the most wholesome and necessary for the public good; he has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and, when so suspended, he has utterly neglected to attend to them; he has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature; a right inestimable to them, and formidable to tyrants only; he has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures; he has dissolved representative houses repeatedly, for opposing, with manly firmness, his invasions on the rights of the people; he has refused, for a long time after such dissolutions, to cause others to be elected, whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise; the state remaining, in the meantime, exposed to all the danger of invasion from without, and convulsions within; he has endeavored to prevent the population of these States, for that purpose obstructing the laws for naturalization of foreigners, refusing to pass others to encourage their migration hither, and raising the conditions of new appropriations of lands. He has obstructed the administration *of justice, by refusing his assent to laws for establishing judiciary powers. He has made judges dependent on his will alone, for the tenure of their offices, and the amount and payment of their salaries. He has erected a multitude of new*

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it and to institute a new government, *laying its foundations on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and*

Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government and to provide new guards for their future security. Such has been the patient sufferance of these colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having, in direct object, the establishment of an absolute tyranny over these States. To prove this, let facts be submitted to a candid world: He has refused his assent to laws the most wholesome and necessary for the public good; he has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and, when so suspended, he has utterly neglected to attend to them; he has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature, a right inestimable to them, and formidable to tyrants only; he has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures; he has dissolved representative houses *repeatedly, for opposing, with manly firmness, his invasions on the rights of the people; he has refused, for a long time after such dissolutions, to cause others to be elected; whereby the legislative powers, in-*

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it and to institute a new government, laying its foundations on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government and to provide new guards for their future security. Such has been the patient sufferance of these colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having, in direct object, the establishment of an absolute tyranny over these States. To prove this, let facts be submitted to a candid world: He has refused his assent to laws the most wholesome and necessary for the public good; he has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and, when so suspended, he has utterly neglected to attend to them; he has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature; a right inestimable to them, and formidable to tyrants only; he has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them *into compliance with his measures; he has dissolved representative houses repeatedly, for opposing, with manly firmness, his invasions on the rights of the people; he has refused, for a long time after such dis-*

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel *them to the separation. We hold these truths to be self-evident: That all men are created equal;*

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it and to institute a new government, laying its foundations on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government and to provide new guards for their future security. Such has been the patient sufferance of these colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having, in direct object, the establishment of an absolute tyranny over these States. To prove this, let facts be given to a candid world: He has refused his assent to laws the most wholesome and necessary for the public good; he has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and, when so suspended, he has utterly neglected to attend to them; he has refused to pass other laws for the accommodation of large districts of people, unless these people would relinquish the right of representation in the legislature; a right inestimable to them, and formidable to tyrants only; he has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatigu*ing them into compliance with his measures; he has dissolved representative houses repeatedly, for oppos-ing, with manly firmness, his invasions on the rights of the people; he has refused, for a long time after*

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among *men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of*

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right

Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to

Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government and to provide new guards for their future safety. Such has been the patient sufferance of these colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an *absolute tyranny over these States. To prove this, let facts be submitted to a candid world: He has refused*

8 Point Lining French Oldstyle No. 552

WHEN, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it and to institute a new government, laying its founda*tions on such principles, and organizing its powers in such form, as to them shall seem*

WHEN, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation. We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it and to institute a new government, laying its foundations on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and, accordingly, all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But, when a long train of abuses and usurpations, pursuing invariably the same object, evinces a *design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government and to provide new guards for their future security. Such has been the*

American Line Leaders

IN another section of this Catalogue (see index) will be found a showing of a complete assortment of American Line Leaders, made in five styles: one dot to the em, two dots to the em, three dots to the em, fine hyphen face and the regular hyphen face. The sizes range from five to eighteen points. These are the only correctly proportioned and accurately cut leaders on the market, this perfection being attained through the use of tools invented and used exclusively for the purpose by the American Type Founders Company. These leaders are cast from copper alloy type metal, excelling in lightness and durability. American Line Leaders are put up in job fonts of three and five pounds each and are sold at regular body type prices,— the same prices, in fact, as are charged when buying them in bulk. These small fonts have proved a great convenience to our customers

MOST RELIABLE INFORMATION CONCERNING BEAUTIFUL SOUTH SHORE HEALTH RESORTS

THE South Shore of Long Island, on the sea, will strongly appeal to anyone who enjoys the ocean with its fine surf bathing, sailing and deep-water fishing. The Great South Bay, the Mecca for lovers of aquatic sports, skirts the southern end of Long Island for a distance of nearly eighty miles and is an ideal and safe inland sea for sailing, fishing and still-water bathing. It is hardly necessary to point out the suitable places it contains—the Rockaways, Long Beach and Manhattan Beach—the latter place with its world-renowned Southern Beach and Continental Hotels. The recent improvements at Rockaway Beach make it very desirable for summer residence. The hotel and bathing houses there are attractive features. Belle Harbor, next to Rockaway Beach, is a lovely seaside residential district and many attractive homes are located there. The Belle Harbor Yacht Club is situated on Jamaica Bay, and is one of the features of that lovely place. Following the coast line to the east is Arverne, a modern summer city by the sea, Edgemere, Far Rockaway and other resorts, all delightful places at which to spend the summer or for all-year residence. In addition to the hotels, there are a number of attractive boarding cottages for the convenience of summer visitors who may arrive. These are favorite places with business men, who find their nearness to the city advantageous and their cool nights in the summer particularly inviting. These resorts can be reached in a very short time from New York by way of the Twentieth

GO TO THIS NEW HAMPSHIRE LAKE RESORT FOR AN OUTING

THE largest and finest sheet of water in New Hampshire, and one of the country's most popular summer resorts, is Lake Winnipesaukee. It is easy to understand why it continues to hold such a high place in the affections of so many vacationists, for there are few lakes in all the world so superbly and splendidly endowed with the attractions of scenery, climate, and social life and enjoyment that go to make up the ideal resting place. One who would not be satisfied with Winnipesaukee would be indeed finical. Large in area, picturesque in conformation and with waters of crystalline purity, its serrated shores are indented the most romantic coves and harbors is partly inclosed by tiers of green hill

ONE way, the ancient and at one time the only way, of putting a piece of copy into type is as follows: The compositor glances over the manuscript with the wise eye of long practice, does a little rapid figuring with a stubby lead pencil to ascertain what type it will go in, gives his suspenders a hitch, then takes a fresh chew of tobacco and fires away. The result, when well printed, is legible, fairly neat in appearance, and difficult for a layman to criticise, even though he may have an uneasy feeling that it is not what it should be. That is typography, but it is by no means art. Artistic expression by the means of types is sometimes difficult, but always worth while. It means this: Every proposition, if it be manufacturing, mercantile, professional or what not, is surrounded by an individual atmosphere which possesses certain characteristics peculiar to itself. It presents points of individuality which are of importance, which are indeed essential to a complete and precise comprehension of its true character. These characteristics must be set forth by one skilled in the art of phraseology in order that the public may understand them. Then the mechanical details are left to

Times Border

Quality is Everything

Naturally, after having spent nine years in buying advertising printing, I have pretty positive ideas on the subject of quality. The chief of these is that you cannot buy printing by the yardstick. I have found that there is only one way to get good printing, and that is to find a good printer and trust him. As soon as I found such a printer I never even thought of asking for an estimate. When I suggest such a process to a business man he goes up in the air, but that is owing to his own lack of experience and not to the fault of the theory. Of course it would be very easy for a printer to get the best of me once on this plan, but if he expected me to give him my work of quality he would not do it

THERE was a time when flat stones with a good grit to them were the best thing we had for doing our grinding. By and by some genius cut the stone round, put a crank through the center of it, and it was then that science recorded the birth of the grindstone and people wondered why nobody had thought of it at some former date. Time passed, grindstones began to accumulate moss of antiquity, until emery and other substances began to take their place in the abrasive and grinding fields. Still science was not content. The diamond seemed to be the only thing that would fill the bill, and the use of diamonds would throw this world into a bankruptcy court within a month if we tried to make grindstones of them; and science mourned. In the meantime a very practical man began turning over in his brain the thought of making diamonds by applying intense electric heat to carbon and silicon. He did more than turn it over in his young mind, he accomplished it and gave the world a much-sought, hard, rough stone that is known everywhere as Carbonine

Bulfinch Border

NOTICE CHANGE OF ADVERTISING RATE

Just a year ago we announced an increase in our advertising rate. We then stated that if the magazine continued to grow in favor and in circulation we should raise the rate with such progress. The Rural Journal is bigger, better and greater than it was a year ago; it costs more to produce and it gives increased value to advertisers who use it. The new rate will be $100 a page, beginning with the May issue. The average monthly circulation of 145,000 copies will be guaranteed for a magazine advertising year beginning on the first of May. Our advertisers will be privileged to reserve space at the present rate of $98 a page until the April issue, provided that space so reserved will be continued at least another year. A discount will be allowed on all orders of three or more pages; this is the only discount. The fact that for ten issues of the Rural Journal each one had over one hundred pages of advertising is the best proof of its value as a medium of publicity among many careful advertisers who want the best. When you place your advertising in this paper it will repay you

"Own a Home on the Highlands," where you can have Country Comforts with City Conveniences

HOME selecting is becoming more and more difficult. So many conflicting claims are being put forth on behalf of the various new residential sections in and near the city of Cleveland that it is quite a serious problem to choose a site that is satisfactory in every respect. All sorts of arguments are advanced, and all sorts of theories are increasing every day and are being propounded by those who have lots to sell. These are being used simply to assist sales. They do not help the man who wants to know beyond doubt that his home will be permanently satisfactory and increasingly valuable with every passing year. The safest course in such a dilemma is to locate in a section where all the advantages are guaranteed

PRINTING PROBLEMS

THE FIRST problem of the composing room is the *arrangement*, and this involves a more detailed attention than it is usually given. The idea of the arrangement must be to bring the number of steps to be taken by the workmen down to a minimum. This arrangement should begin with the laying out of the type faces in the cases. Series frequently used in combination should be placed in proximity. Your text letters and the light-faced gothics used with them in the commercial work should be together. Members of the *Cheltenham Family* should be near one another, so that workmen setting a display announcement or a newspaper advertisement *may waste no steps*. Your composing room should be laid out with a definite idea as to the classes of work to be handled. Each man on blank or book-heading work should have a frame to himself, with his case of eight point for box-head work and display faces within easy reach. Certain alleys should be reserved for small commercial work and the stands should contain the faces regularly used on letterheads, programmes, and other work easily classified. Bold display work may be separate

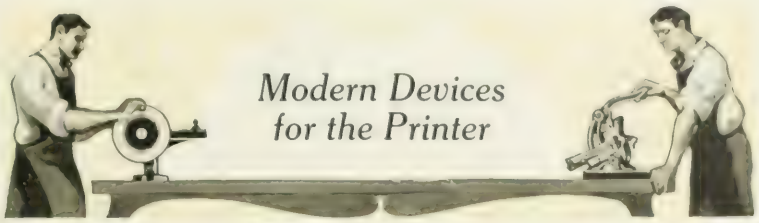
THE EXODUS OF PRINTING

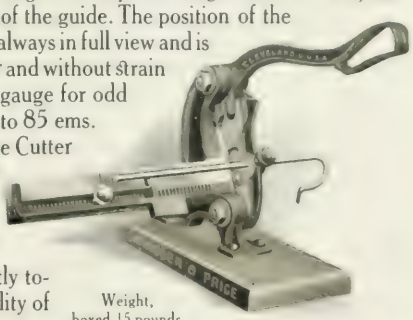
WILLIAM BLADES, in his posthumous historical volume, The Pentateuch of Printing, discusses the origin of the art under the head of "Genesis," and its diffusion under that of "Exodus." As both these divisions of typographic history appertain to the fifteenth century, certain individuals being involved in both, they are not always clearly distinguishable even in the minds of the well-informed readers. As matter for history, the invention of printing always has received vastly more attention than the diffusion of the art. Yet the first subject is still involved in a cloud of controversy, its problems being, to a great extent, mechanical, and the very materials which the judgments are to be based upon are scanty or altogether wanting. The second subject is rich in popular as well as technical interest, having even a touch of romance, and its materials are abundant. Yet, so far as the general public is concerned, this



Electrotype Half-tone No. 1 for 2 colors, complete $2.00

The Chandler & Price Lead and Rule Cutter

IN this cutter are many valuable features. It is a radical departure from every other style. The bed is nearly vertical, but inclines slightly from the operator. The lead or rule rests on a raised guide along the lower edge and automatically assumes a true position by gravity, assuring a square cut. The guide is accurately graduated to 12-point ems and numbered to 5-em lengths. The gauge is reversed for cutting leads required longer than the bed, and is fitted with a latch to engage the slots of the guide. The position of the guide is such that the graduated scale is always in full view and is immediately seen without stooping over and without strain on the eyes. A thumb-screw holds the gauge for odd lengths. Gauges 14-inches—from zero to 85 ems. In the Chandler & Price Lead and Rule Cutter the cutting mechanism is designed for accuracy and special rigidity. The two cutting blades are practically built to each other by being fastened at both ends, which keeps them working tightly together. Powerful leverage and the rigidity of adjustment are characteristic in this cutter. The gauges on this cutter, when properly adjusted, cannot possibly slip; they are accurate and are sure to remain so. Short measures are quickly cut on the front gauge



Weight, boxed, 15 pounds

The Chandler & Price Mitering Machine

This is a strong, well-built machine for mitering brass and metal rule to any desired angle. By adjusting the screw at the end of the hub the knife can be instantly set to cut any desired strength, making it convenient to start a miter with a strong shave, thus cutting more rapidly, and then toning the shave down to accuracy in the finishing. A good mitering machine is one of the handiest implements around a composing room—a tool that is useful in so many ways that it will pay for itself in economized time. The Chandler & Price Machine is different from all others in design. It combines strength with simplicity. The knife is made of the very best steel and is easily sharpened, thereby insuring a good miter

THIS STITCHER IS SO MUCH DIFFERENT AND BETTER THAN ANY OF ITS RIVALS THAT COMPARISON WOULD BE AN INJUSTICE TO IT

THE BOSTON WIRE STITCHER

The Single Adjustment Feature of the *Boston Wire Stitcher* is a valuable time and money saver. By turning the hand wheel at the back of the machine to gauge the thickness of the work, all the parts, including the feed, the cutter, clinchers and table, are automatically adjusted, and the first stitch driven is perfect. This one feature does away with the many expensive accidents typical of all competitive machines and places the *Boston Stitcher* at the top notch as a time and money saver. It should be remembered that from three to six different operations are necessary in other stitchers having any adjustment for length of stitch, and those without adjustment are capable of stitching but a few sheets at each operation. *The simplicity of adjustment is a desirable feature of this useful machine*

How Shall I Spend My Vacation?

is a question that looms large upon the horizon of the man or woman worn with the social or business activities of the past winter. The boon of the modern vacation is used by some and abused by others. What do you want to do with your vacation? It should be a period of rest and leisure. Its value lies in making it so. It has been given you for the purpose of revitalizing yourself. The place to do this is not upon board walks or amid the rabble sounds of strange cities. It is impossible in a hostelry where social ostentation tempers the air, however pure and sweet the air may be. The place to go for new life and new energy is where nature rules supreme, and that is to the Berkshire Mountains

Old English Border

This page of display is set in Cheltenham Wide, which is a member of the large and popular Cheltenham Family. For fine booklet work it would be difficult to secure a more excellent design. It is extremely legible, very attractive, and retains the many strong features which have created the great popularity of the family

TILES

And Their Uses

SEND FOR OUR BOOKLET

There are a number of places in that *new residence* you are planning to erect where tiles can be used to better advantage than any other material. There are at least four places where tiles are essential: the fireplace, the porch floor, the bathroom floor and walls; they may also be used to advantage in kitchen and laundry. In order that we may better explain to you our line of tiles for every purpose, we have prepared a booklet covering these points in a most interesting manner. It treats of the ornamental and decorative features of tiles, inlaid floors and mantels. We *will present this free* to any home builder. You will do well to read it before perfecting your building plans. The booklet itself is a work of art

Inspect Our Gold Fish

Aquariums, Globes, Small Castles, and Aquatic Plant

HAVE you ever watched a globe full of little gold fish disporting themselves in the welcome sunshine of a spring day? How their golden bodies glisten; how they dart here and there looking like a ray of the warm light of which they seem a part. These pretty little creatures are a species of *Carp* and are brought here from *China* where their color is produced by artificial selection, being in their natural state of a greenish tint. Are you interested in these little fish so much loved and admired for their beauty and grace, a means of decoration to any home or office, of no little instruction to the young? *Inspect our large supply* of the pretty little gold fish, also the artistic and attractive homes for them in the way of miniature aquariums, globes and castles. *Our store is open every evening*

INFLUENCE OF THE TRADE JOURNAL ON OUR INDUSTRIAL DEVELOPMENT

NEVER has it been reported that Aesop published a technical journal, but it is widely known that he possessed a generous supply of the truly American advantage, practical common sense. Thus equipped, and with his ability to present his message in an attractive form, he might have justly aspired to the profession of journalism (even technical journalism) but for the fact that he was born some thousands of years too soon. One of the Aesop stories relates how a certain husbandman told his sons that he had left unto them gold buried under the ground in his vineyard, and they digged all over the ground and of the gold they found none, but by reason of stirring and digging the mould about the roots of their vines, they had a very good vintage the next year. Lord Bacon, another philosopher who ought to have been an American, repeats this fable with the following comment: "So, assuredly the search and stir to make gold hath brought to light a great number of good and fruitful inventions and experiments, as well for the disclosing of nature as for the use of man's life." Now, it is just along these lines that the

THE glory and power of Printing is not in the past. Its influence at the present time makes it a powerful conservator of all human acts and progress. It is the handmaiden of all the arts, industries and sciences, and the most energetic worker in the world's shop to polish and refine the civilization of this age and the future. When we consider its mission, and see in it all the great possibilities for perpetuating the inventions and knowledge of all eternity, we may well designate present printing as the Art Preservative of all Arts

THE ORANGE GROVE

WHEN we speak of oranges, we at once bring before our minds a vision of the beautiful State of Florida, the flowery peninsula, where flows the fountain of youth perpetual. How would you like to own a few acres of the orange country? You will not find a more pleasant place for a home in all the world than among the orange trees with their fragrant blossoms and their golden fruit. The Key West Real Estate Company will mail you a portfolio containing actual photographs of the orange territory showing groves at all seasons of the year. In this portfolio are also views of the Everglades, Cypress Springs, and some interesting historical sites in quaint old St. Augustine. Fill out the enclosed blank and mail to us, and receive this collection of views from Florida. This land lies close to the great Indian River district and is known to be free from destructive early frosts. Jacksonville lies but a few miles away and is reached by one of the best roadways in the State. Florida has an annual production of many thousands of

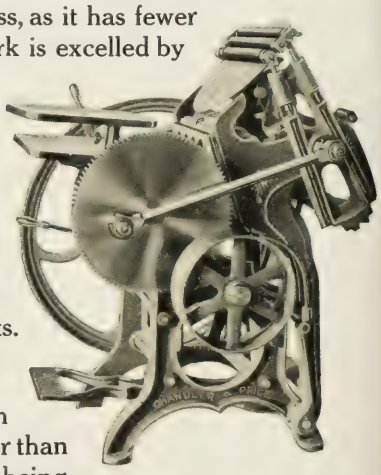
ABOUT THE CHANDLER & PRICE GORDON PRESS

ENTERPRISING printers are appreciating the important points which make this press far superior to any other. In ninety out of one hundred printing offices in the country, the Chandler & Price Gordon Press is certainly the greatest money-maker in proportion to investment and cost of operation of any of the equipment. When other presses are idle in a shop, this press is usually busy and crowded with work. It is undoubtedly true that the foundations of a big majority of the successes made in the printing business during the past twenty years were laid with the profits made upon Chandler & Price Gordon Presses. Although the first of these machines was built in the year 1886, most of them are still in use. Printers will part with other presses for new ones, but they hold on to their Chandler & Price Gordons. This is proved by the fact that though thirty-four thousand of these machines are in use, it is an unusual thing to find a second-hand Chandler & Price Press that is offered for sale, they being so well constructed they outlast all other makes.

The Design or Mechanical Principles

A machine of few parts has a distinct advantage over a machine having many parts, provided it does its work equally well. That is one of the great advantages of the Chandler & Price Gordon Press, as it has fewer parts than any other type of job press, and its work is excelled by no other. The fact that there are over thirty-four thousand Chandler & Price Gordon Presses in every-day use should be sufficient evidence that they give first-class satisfaction. The design and mechanical principles involved make Chandler & Price Gordon Presses as nearly "fool proof" as a printing press can possibly be made. It has no complicated parts, and is simplicity itself in all its movements, thereby reducing most repair costs.



Weight Balanced Perfectly

The Chandler & Price Gordon Presses weigh from three hundred to five hundred pounds heavier than other presses of the same type, the extra material being largely in the frames, the platen and the bed, though it is distributed in proportion through the other parts of the machine on which strain of impression is thrown. Great care has been used to distribute the weight so that all parts

Some Marine Expeditions Under Extraordinary Men

GIVING A COMPLETE AND DESCRIPTIVE ACCOUNT OF THE CRUISE THROUGH THE PERILOUS CHANNELS TAKEN BY THE SEARCHERS

HESE marvellous and very exciting adventures of John Amond, his servant Conseil, and a Norwegian harpooner, Ned Jenson, had their origin in 1867. For many weeks ocean vessels had been met by an "enormous beast," a long object shaped like a spindle, occasionally phosphorescent, and infinitely larger and more rapid in its movements than a whale. Others observed what appeared to be a sand bank, or reef, in mid-ocean, which shifted from place to place. Ships were injured by collisions with the mysterious object, and others were beyond the shadow of any doubt destroyed by it, since there were numerous total disappearances of vessels. Finally the United States Government sent out a warship, the Abraham Lincoln, to search for and capture or destroy the creature, whatever it might be. On that vessel I, John Amond, with Conseil and Jenson, secured passage. Hundreds of miles were sailed without any result. Then, November 28, not far from the coast of Japan, the object of our quest was sighted. A prolonged chase began, the unknown object easily keeping ahead of the ship. But one night it lay still upon the water, apparently an enormous whale with a luminous eye. Our vessel stole up to it. Ned hurled the harpoon. I heard the sonorous tone

Variety Means Profit and New Faces Cost No More Than The Older Designs

Variety is a strongly-marked factor in the commercial activity of this age. Modern merchants and manufacturers in all lines have found it profitable to cater to the public demand for frequent innovations. Many years ago the styles in feminine garments did not change once a year. A dress was in style until it was worn out. Now such styles change at least once in every three months. Even the apparently conventional clothing of men varies constantly. This Fall the coat lapels are cut short; last Spring they were cut very long. Naturally there is an added profit for the tailors and the dressmakers under these modern conditions. *They* will assert that variety pays. Every progressive printer will take advantage of this modern taste for variety, for more variety is possible in printing today than ever before. *The American Type Founders Company* is constantly designing and producing new and attractive type faces. These newer faces cost no more than the old designs and they will infuse into the work of the printer who buys them the variety that attracts the purchaser of printed matter

SEARCHING THE TITLES

Closing the titles to real estate is often a very tedious matter and, unless it is conducted by experts, complications are apt to follow, and it is possible for you to incur a great financial loss thereby. Let us show you our methods and facilities for closing real estate titles, etc.

KING OF ALL TYPE

The sovereignty of the Cheltenhams in the big world of advertising has been thoroughly established. The growing popularity of the new members which have recently been added is an indication that this most pleasing type family will remain in favor for many years to come. When we consider the versatility and dignity of this monarch of display, we readily appreciate the reason for its phenomenal success. The progressive printers and publishers buying liberal weight fonts are certain to give the Cheltenhams first place in their composing rooms. Never in the history of type casting has the printing trade been presented with such variety and harmony in a single series of type faces. Its intrinsic worth and great adaptability is acknowledged by all. Sold in weight fonts at our regular body type prices

Cheltenham Bold in Practical Display

THE AEROPLANE IN FLIGHT

WHEN Morianson's craft left the ground he did not waste any time in making preliminary circles about the field. Steadily he forced his monoplane skyward, and in regularly widening circles he soared. The machine seemed to become smaller and it was more difficult to observe, and the crowd took its attention from the desultory flying of the champions. At times the aeroplane, outlined against a hazy sky, would vanish as it made its wide circles; but in a short time would reappear to the northeast, like a faint speck, swimming at a height which it seemed impossible

Aerial Cuts Margin Ornament

THE PRIDE OF CHELTENHAM

This useful and handsome series is distinctively an American Product and is in keeping with the American reputation for giving the printer a plain, stylish and serviceable type face. Its field of usefulness in all branches of the trade is unlimited. The Cheltenham Family, renowned for its legibility, is always popular. The American Type Founders Company is the leader in type fashions, having a large department devoted to the designing and cutting of distinctive and original faces in type, and to the manufacture of artistic decorative material and brass rule

AMERICAN TYPE FOUNDERS COMPANY

Strong "Pull" and Drawing Power in All Our Printing

NOT ALL catalogues are consigned to the waste basket. A good many find a place in the files of the recipient or on his desk or his table. The catalogue upon which one can depend to win this distinction is of the out-of-the-ordinary class, the well-designed and well-executed example of the printing art. Every business man desires that his catalogue should have what is known as "pulling" power; that is, it should accomplish its intended mission, namely, to set forth the value of goods and secure orders for those goods. The catalogues we print are those that win the coveted place at the elbow of the prospective customer. They do it by their attractiveness. We employ the highest class of workmen, who are specialists on catalogue work

Cast Squares Indian Border

BOOK MARK

OPENING A NEW BOOK

Hold the closed book with its back resting on a flat surface; drop the front cover down flat and then the back cover. Still holding the book with the left hand, open a few leaves at the back and then a few in the front with the right hand, *gently* pressing open sections till you reach the center of the volume. Do this two or three times and you will obtain the best results. If you open the book violently or carelessly in any one place you will very likely break the back, causing a start in the leaves. *Never force the back.* If it does not yield to gentle opening, the back is too tightly or strongly lined. Protect your volumes and they will last you longer *and give you better service*

Cheltenham Bold Italic

Striking designs are possible only when type has a decided character. In all of the types cast by this Company much character and dignity may be found. They represent the very highest grade of workmanship and are cast with an idea to save labor and to be practical. The printer who is successful is the one who is ever on the lookout for new methods for attracting the attention of the prospective customer

For a bold display in either job printing or advertising, this fine Cheltenham Bold Italic has all the real requisites for legibility and distinct color. It is easy to read, with no hair lines to break down, just one straightforward dividend-earning type face. It can be used today and for an unending succession of days to come, ever producing you profit

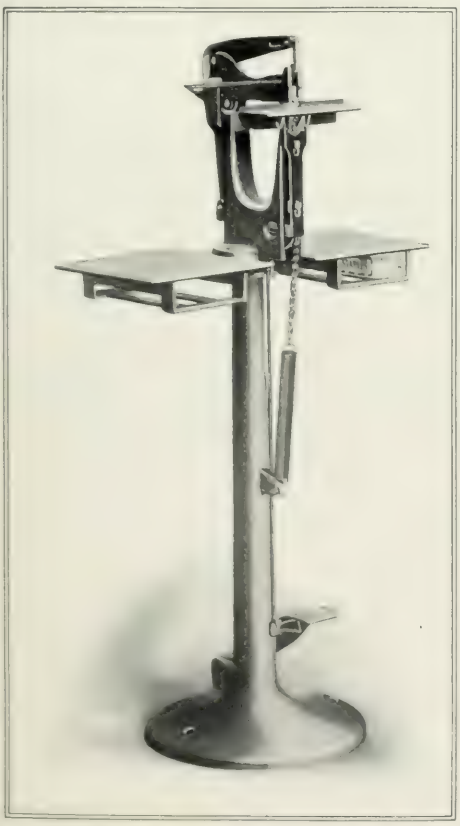
BOSTON STAPLE BINDER

The Boston Staple Binder is the handiest binder and best paying investment which has ever been offered to the up-to-date printer



Realizing the great necessity of an efficient, well-built stapling machine, the manufacturers of the Boston Wire Stitcher have invented and brought out the Boston Staple Binder, the only perfected and up-to-date stapler that practically duplicates the work of the best stitcher. The Boston Staple Binder is built on distinctly new lines, with many valuable features never before used in a stapling machine. It is the nearest approach to a regular stitcher yet devised, and its work is neater and better than that of any stitcher other than the Boston. It is difficult to distinguish its stapling from that of the best wire stitching. Staples are furnished on tin cores (no shrinking or swelling of wood) with paper covers, and placed in the machine at the right-hand side. The cores may be lifted out of the stapler and replaced as often as necessary without loss of staples, saving from twenty-five to fifty per cent in staples over all other machines. Write to nearest House for full details

American Type Fashions

Users of printing realize the intrinsic value of new type ideas. Let the printer consider this fact well and equip his plant with type of twentieth century style

Type Faces of Bright Design

AMERICAN TYPE FOUNDERS COMPANY

Originator of
The Cheltenham Family

HANDSOME type designs are certain to bring the printer more business. It is one of the leading objects of printing to invite favorable attention. How to accomplish this, thereby greatly increasing its advertising value, is the constant study of those earnest printers who are striving to meet the demands for the very best in modern typography. The designs produced by this Company excel in variety, utility and originality the combined products of all other type foundries. Offices equipped with American material are worth more for use or sale than offices equipped from other sources. The question now arises: "Why buy old faces when the newest and best designs cost no more?" Why use the old-fashioned type faces when new faces make your work more attractive; when the new faces are invariably carried in stock, while the old faces, being cast to order, cause delay and increased cost? Stylish Type means more profits

SUPERIOR SAFETY

AMONG the features which make for the safety of a bank, the maintenance of an ample surplus is of the greatest moment. Together with the bank's capital, it stands between the depositors and possible loss. The Superior now has a capital and surplus of One Million, Two Hundred and Twenty-five Thousand Dollars, and this fund shows a great increment by the addition of the undivided profits. The confidence of the people in the Superior's safety was well shown on the opening day, when deposits amounted to more than Six Million Dollars. Since that time, seven years ago, the phenomenal growth of this bank has greatly increased its resources until they now exceed Twenty Million Dollars. This is the most remarkable record of growth ever enjoyed by any banking concern in Vermont. The safety of a bank depends greatly upon another point, perhaps as much as upon capital and surplus, that is the character and general personality of its Board of Directors and Managing Officers

A SMOOTH, QUIET RUNNING ENGINE

Is much less expensive to maintain than a noisy vibrating car that bumps and jolts along the road, causing unnecessary wear from vibration. Did it ever occur to you that vibration is the most dangerous defect known to automobiles? If you would have a car so flexible in construction that it will crawl through the crowded traffic, mount the most difficult hills, or fly along the country roads with velvet-like smoothness and never a shift of gears, look at the "BUMPER" with its offset crank shaft, straight line drive, and large, comfortably riding wheels. At last, in a moderate priced car, you are offered all the superior features and high qualities which have hitherto been obtainable only in machines costing $900 and upward. All models exhibited at the "Big Show" in Madison Gardens

AMERICAN
TYPE FASHIONS LEAD

Originator of Stylish Type Designs for all Progressive Printers and Their Customers

New Styles in type are created in order that attractive variety may be added to commercial and advertising typography generally. To be progressive, the printer must always use new faces before they become ancient history. It is the novelty that makes new faces valuable. They catch the eye of the reader by a change in form and tone of printed matter. The type face that has become the property of all in general loses somewhat its original attraction. It is this Company's one aim to create new styles in type which may be used by printers who want the pulling power that goes with novelty—a power to utilize new designs while they are new and stylish. Style in type is as valuable as style in literature. Printers having the ability to compose their copy in a pleasing manner are worth as much to the advertisers as are the copy writers who bend their efforts toward originality

ERECTING HIGH BUILDING

MOST LOFTY STRUCTURE IN THE STATE EXPECTED

PLANS FOR 55-STORY BUILDING FILED—TWENTY-FIVE STORIES IN THE TOWER; THREE STORIES TO BE UNDER GROUND

This mammoth skyscraper is to be the tallest office building in the world, and will be erected on the westerly side of Broadway, occupying the block between Jay Street and Parks Place. It will be 750 feet high, or about 50 feet higher than any other building. Mr. Brady recently secured the Jay Street corner, he intends to change his plans so that he can utilize the entire block for his new building.

"My building ideas have enlarged," he said, "in harmony with the acquisition of additional property. The plans originally prepared for the building on the Parks Place corner will be entirely altered. My present idea is to have the main building of from twenty-seven to exceeded in height in the world by the Eiffel Tower, 985 feet, will cost about $12,000,000. The land, which has been acquired in the past year, has cost nearly $5,000,000. The building, to cover a total of 39,500 square feet, will afford almost 13,000,000 cubic feet of available space in the completed structure. It will be of the best fireproof construction, and in the revised plans the original general ideas adopted for the smaller enterprise will be incorporated. The tower, Mr. Brady says, will be an architectural ornament.

Mr. Brady will have possession of the Jay Street corner about May 1, at which time the leases of the tenants expire. By that time the excavating work of the

HEARD CALL OF THE CITY

MADISON, N. J., GIRL STARTING OUT TO SEEK HER FORTUNE IS CAUGHT AT GENERAL STATION

Feeling the call of the big city, Agnes Cavanaugh, now sixteen, packed her valise and with two small bundles of extra clothing and a hat box set out solemnly from Madison, N. J., to cast her fortune in this city. She did not expect anyone to meet her and was much surprised when Lieut. McIntosh accosted her by name, as she alighted from a train at 11 o'clock at night in General Station.

On the way to the Fifty-sixth street police station she explained that she had grown homesick up in the country, and had come away full of confidence in her ability to take care of herself here. She emphasized these intentions to Lieut. Ranier at the station house, and became highly indignant when he said he would have to send her to the Children's Home.

Lieut. Ranier got the news of her coming in a queer way. A call came to him about a half an hour before the train was due telling him the girl's name, saying she was pretty and describing her dress. Then suddenly the telephone connection was cut off. Lieut. Ranier soon decided that a girl from Madison must

Cheltenham Bold Extended

A USEFUL MEMBER OF THE FAMOUS CHELTENHAM FAMILY

A bold and extended letter has many uses in display advertising when shown alone or in combination with the more condensed faces. For the purpose of display is to bring out with greater force an idea or ideas contained in the text. The bolder the display, within the limits imposed by taste, refinement and rules of harmony, the more thoroughly the desired effect will be produced. The Cheltenham Bold Extended is the most forcible and vigorous member of the Cheltenham Family. It harmonizes perfectly with all the other members and it retains its boldness without sacrificing any of the refinement inherent in all the Cheltenhams. It is an ideal display letter of sufficient strength and distinction to demand attention, regardless of position or tone of surrounding matter

ONE OF THE POPULAR MEMBERS OF THE USEFUL CHELTENHAM FAMILY

This characteristic and striking type design commends itself to discriminating printers, it being useful as a distinct series for fine commercial printing and as an advertising letter. It is effective in combination with all the other members of this widely known Cheltenham Family. The use of this type means something more than merely to give us a page of printed matter, it brings desired results to the printers who use it

Homeland Residences

On the Aero Planeway

IF you are one of those city dwellers whose early life was passed in the country you are the person we have a message for; you are the person we can interest because you know from experience of the enjoyment and health there are in plenty of fresh air, light, sunshine and roominess of country life, and that is the subject of our message to you. Business may make it necessary that you should be in the crowded, busy city every day but the time has come when you need not spend the twenty-four hours of the day there. Homeland is only fifteen minutes from the city. Homeland is located among the most peaceful natural surroundings of woodland, fields, streams and lakes. It has all the advantages of the city, including gas, electric light, sewers and purest spring water plentifully supplied for every purpose. It has asphalt streets and the finest crushed stone roads into the country, giving the most delightful opportunity for motoring. Any man can own a home here to suit his taste and salary. Give us an opportunity to prove this

WITHOUT the latest and most artistic type faces fine printing is almost an impossibility. Novelty in type faces is always an incentive to the production of beautiful and attractive printing. The new Cheltenham Extrabold is a very striking and attractive member of the great Cheltenham Family and one which will readily lend itself to the many requirements of all advertising and other display composition. The addition of Cheltenham Extrabold to the plant of any printer will surely bring its own reward by renewed orders and an enviable reputation for excellent work. American Type Designs have a decided character and dignity. They represent the very best workmanship and skill in their manufacture. A glance at these original American Type Designs will cause many to buy

AMERICAN TYPE FOUNDERS COMPANY

Facts

FOR ALL PRINTERS

THE BEST proof of the value of new type faces to the printer is shown in the tremendous growth of the American Type Founders Company, which puts out more new faces than all other type foundries combined. The printer finds that the customer's eye is caught by the new faces, and that his printing orders increase. The most practical way to obtain difference and distinction is with the newer type faces which give the effect of pleasing novelty, without eccentricity. Business men of today are demanding plain and easily-read composition, well printed. Since this kind of printing is standardized, the only way in which distinction can be obtained is in the use of original display type faces. Many new and attractive faces are shown in this book

AMERICAN TYPE FOUNDERS COMPANY

COMMERCIAL PRINTING

From the HAYDEN PRESS

THE Hayden Press is glad to announce that recent important improvements and added facilities make it practicable to continue to turn out the highest grade commercial printing at what in many cases will represent a material saving in costs as compared with the best figures formerly made. Quality of course will remain the same, our motto being, "Reliability Plus Progress." Agreeable to this idea, we shall take pleasure in receiving your printing orders

Story of a Cuban

A New Novel
By General Matoz

A TALE of Cuba and the famous war with Spain in which many brave men laid aside all home ties to fight for humanity and liberty. The book presents a picture of the West Indian life which is unsurpassed in modern writing for its splendid realism. General Matoz can write intelligently of this island. He knows Cuba and its people, its wonder and charm, and in a story centering around a great war of rebellion he has taken up the fortunes of Alfa Tero, a son of Captain Manuel Tero of the Cuban army. The book is illustrated in color. The other book written by this great author as a companion story, "The Island's Queen," has proved an unusual seller. Price either book, $1.50

THE STERLING VALUE OF THE CENTURY TYPE FAMILY

As mahogany is among woods, or wheat among the grains, or the diamond among precious stones, so is the Century Family among types. No work set in it can look other than superior. It is impossible to make any work which is set in the Century Family look commonplace. There is no work (whether the finest or for the most ordinary of every day uses) which cannot appropriately be set in the Century Family. There is no safer purchase, and none more useful. The Century Family will never go out of fashion as long as good typography is in demand. It is a classic family and will therefore outlast many other type styles

MANY THOUSANDS OF PERFECTLY SATISFIED USERS OF OUR PRODUCTS THROUGHOUT THE COUNTRY ATTEST THE SUCCESS ATTAINED

NESTON, the inventor, was the first man to develop a line of reinforced concrete lamp standards, and is today the recognized authority on the application of concrete to ornamental lighting. The principle, first employed in manufacturing ornamental standards for the great Neston Lighting Company, was applied later to the construction of Jardus Luxolabra as described in Section 24 of this catalogue. Concrete columns are all made in cast iron moulds and the capital and arms are moulded in gelatine. The material used depends upon the colors and finish desired. For instance, lake sand and cement properly mixed gives a natural sandstone finish; fine white sand and white cement produces a very beautiful white marble finish, whereas, white sand and white cement mixed with crushed marble presents still another appearance. This company is in a position to furnish standards in thirty-two concrete finishes. Ten designs are always kept in stock, believing that the others are merely slight modifications and will not be in great demand. A frame containing samples of ten

A GENERAL DISCOURSE UPON THE VICISSITUDES WHICH ARE ENCOUNTERED BY AUTHORS AND PUBLISHERS

IT HAS been said by some bright person, probably an ad-writer, that this is the age of the fountain pen, and the amount of manuscripts which are offered to the publishers would certainly lead one to that conclusion. A very interesting and characteristic collection they are, too, ranging from the delicate, sandalwood scented and beautifully wrought pages of a foreign essayist and the pathetically hopeless attempt of the neophyte to the bulky reams of the philosopher or scientist. The surprising thing is not that so many are found to be unacceptable as that so many are found to be passably good. The reader for a prominent publishing house has estimated that of the great mass of manuscripts which are submitted during a year only about one and one-half per cent are published. This does not mean that the others were worthless, but simply that they lacked the qualities which were necessary to make them available. In the case of fiction, either the plot or the treatment would be hackneyed, or lack human appeal, while other manuscripts dealt with subjects that had already been better handled, or subjects that are not worth handling at all. Many manuscripts miss acceptance because, while they are passably good and would probably sell five hundred or even a thousand copies, this sale would not be great enough to pay the cost of manufacture. Roughly, it takes a sale of about five thousand copies to pay expenses, and unless such a sale is practically certain, publication is not worth while. The author who really has an interesting narrative to tell, or an important message to convey, can usually succeed in finding a publisher to undertake the manufacture and sale of the book upon some sort of terms. Naturally the publisher makes as good a bargain with the author as possible; that is only ordinary business prudence. In fact, the author who has written one or more successful books is usually in a position to dictate almost any sort of terms. Some of the well-known writers are the object of keen rivalry on the part of publishers, and are paid large sums in advance royalties. This practice is exciting, but not always satisfactory to either party to the contract, especially when the

THOUGHTS ON PRINTING

THE success or failure of all printing is steadily becoming more dependent upon design as used in a broad sense. Design includes the preliminary outline or main purpose and all of the elements by which printing is made efficient. It therefore contains the insight into general business conditions and specifically into the business which is to be directly served. Design is arrangement. It is the reasonable and practical adjustment of all the mechanical and esthetic qualities to produce the very best results in competition with all of the rest of the world's products. It is one man or one establishment against all of the rest. Design in printing is the element which combines imagination, taste and skill to produce a desired and definite result. The printing industry may be termed the barometer of commercial prosperity. It differs from all other industries in that it deals with every calling and is closely identified with the prosperity of each. A manufacturer of shoes has but an academic interest in the piano industry, but both the shoemaker and the piano man are vitally interested in the printing art

Kind of Cuts you will use

Printed in what Colors

Any Type preference

IT is important in issuing your advertisements that you know how they are going to appear when finished. The cost can be lowered to a minimum since you have an idea of the work before it is done. If you will give us the information asked for on attached postal card, we will make you up several dummies, *without any cost to you,* from different grades of our papers, and afford to the printer the advantage of the color combinations that we have found can be used in different shades with best results. We have gone to considerable expense experimenting on these color combinations, with the view of being an assistance to you in your work of advertising and *will appreciate an early reply* with the accompanying blank sheet filled out. We believe we can be of great help to the advertiser, and that he will be sure to find these samples very valuable

Blossoms

The plants that give us the most blossoms are those kept young and healthy by people who own them. A printing plant is no exception to this bit of wisdom. The blossoms of dividends are reaped only by the printer who is careful to keep his composing room supplied with plenty of type of modern design and style

OUR NEW TYPE FACES

MODERN printing seems to be getting away from eccentricity. Designs in type should not be crowded or over-ornamented. There is such a mass of printing being put out from all sides, both in literature and advertising, that in order to get a difference the printer must use new faces. They must be easily read. The easiest way to get a difference is with new faces, and the printer with the greatest number of new faces can create the most work; the reason is that he can offer his customers a maximum amount of difference. The best proof of the value of new faces for the printer is shown in the growth of the American Type Foundry

Strathmore Ornaments

A STORY OF THE SUCCESS OF A WELL KNOWN FIRM LOCATED IN EAST BERLIN

This is a small booklet, but its contents disclose a great deal about a certain large print shop in this city. If you can use any printed matter it will prove to be an interesting booklet. And not only that, it will also be a profitable outlaying of time to look through its contents. This print shop is located at Eighth street and Hamilton avenue; it is, as you well know, practically in the very heart of the business district. Incidentally, the shop is composed of a large, roomy and well-lighted floor, with all the modern advantages that are to be acquired from the architect's brain. This plant is equipped with newest printing material which was chosen with a view of being serviceable and distinctive, thus it enables us to print

Fine New Islandwood Pleasure Resort

BEAUTIFUL scenery abounds about Islandwood and makes it one of the most picturesque places in this part of the country. This is a conveniently situated resort, possessing many varied attractions, and is sure to become the most popular summer resort, as evidenced by the fact that many of America's wealthier people are now making their summer home at Islandwood. Boating and fishing are also drawing features for this lake in summer

SHOES

The Boot Shops of Quality

THE EXCLUSIVE CENTURY MODELS

We offer you in ready-to-wear shoes all the comfort and ease of custom service—the result of our life-long experience in custom boot making—yet you pay only for the material and built-in value of the shoes. Century shoe-service-by-post affords to patrons at a distance an opportunity to secure literal correctness and the acme of comfort in footwear, quite as satisfactory by the mails as if purchased in person. Upon request we will furnish large photographic reproduction of current shoe styles for street dress or sporting wear. Our ready-to-wear shoes, the only shoes of similar character and quality ever offered to buyers public ready-to-wear, are sold from seven dollars upward

Individual Reco

Perfect records are kept of all our fittings, and all you will need to do after your first order is to write or wire your requirements as to kinds of shoes or occasion of wearing and the right shoes will go forward within the hour, all at our risk and with our guarantee of satisfaction

THE SUNSETS OF AMERICA

By A. TRAVELER

TOURISTS and travelers have written much concerning the many beauties of the sunsets of *Norway* and of *Sweden* and of other foreign countries. But *America* is not far behind in this respect. In times to come parts of this country will become noted for their beautiful sunset effects, as they should be now. Without leaving his own country an American may see a greater variety of mountain, plain and glacier sunset scenery than can be found in all *Europe*. In addition he has the opportunity of witnessing tonal effects such as may be observed in no other part of the world.

There is probably no more beautiful spectacle than a sunset in the *Bad Lands*, which lie between *North Dakota* and *Montana*. Even at high noon the tones in these dead, barren hills are wonderful; the colors run through the entire gamut of the color scale. The most gorgeous reds, the palest and most delicate blues, the softest pinks and the most blatant yellows are jumbled together and softened by the atmosphere.

A SUNSET IN THE UPPER YELLOWSTONE VALLEY

As the sun sets the natural colors change. The hills seem to be bathed in transparent films of ever-changing color. The reds are changed into deep and translucent purples as the sun gets lower, and the delicate pinks are strengthened until they become livid, flaring vermilions. As the sun nears the horizon these changes are effected with almost startling rapidity. One can scarcely wink without opening his eyes on an entirely new scene. The results are almost kaleidoscopic.

The autumn sunsets in some parts of the *New England States* are also glorious. Such beautiful sunset scenes as one witnesses in this part of the country have proved an inspiration for many of the highest examples of our American art. The country about *Franconia*, in *New Hampshire*, is the seat of a colony of artists, drawn to this section by the beauties of the local sunsets. *Franconia* is situated in the heart of the *White Mountains*, in themselves one of the beauty-spots of the continent. On all sides rise the rugged, stolid hills. Down through *Franconia* there flows the *Pemigewesset* River, shimmering in silvery and golden beauty. The sunset paintings produced by the artistic colony who have captured this section have attracted wide attention throughout the world of art. Even in the more thickly settled and conventional sections of our country the beauty of the sunsets is rarely ever surpassed. Seldom can an artist's brush truthfully portray the beauties of an *Ohio River* sunset. Through a rift a ball of burnished gold illuminates the ragged edges of the cloud tops and casts over the almost rippleless stream a sheen of molten gold. The sun-tipped clouds reflect their splendor in the glassy mirror of the river and cast upon the foliage and the meadows of the banks a tinge of opalescent yellow.

One American artist of great prominence has devoted himself almost entirely to sunsets. The paintings of Gilbert Futrelle have won a reputation throughout the world. The first examples of his work to attract attention were done in the far west, most of them in the *Grand Canyon of the Colorado*. An exhibition of these paintings hung at the St. Stephen's Club in Chicago made a distinct sensation and were highly praised by the critics. Thereafter Mr. Futrelle made a two-years' trip to the Arctic region lying about *Baffin's Bay*. He painted fifty canvases or more, suffering terrible hardships and facing difficulties which have been experienced by no other enthusiast in the pursuit of art. After he returned to the States some of his Arctic sunset pictures were reproduced in colors in an issue of a New York magazine. They caused a great deal of comment and were declared the most unique paintings ever executed by an artist of any repute. Before the interest in his works had subsided, Mr. Futrelle was off for new fields; this time he camped in the *Bad Lands*, just to the east of *Glendive*. The atmosphere of the country lent to his work here a larger element of impressionism than had before been noticeable. As usual, sunsets composed a large part of his work in this country.

At the end of six months he returned to New York City. For something more than two years he was comparatively idle. During this time, however, he painted many sunset scenes, both in winter and summer, taking usually as his subjects the *Palisades*. He also worked along the New Jersey coast, and some of the paintings executed about this time are numbered among the best of his life's work. Two of them are now hung in the Museum of Chromatic Art in New Zealand. For the past two years he has been located in San Francisco.

PREFACE ABOLISHED

AS it is a matter of course for the author responsible for the publication of a book to feel a certain amount of anxiety lest the reader should not be appreciative of its merits, and out of this anxiety comes what is commonly known as a "preface." The author feels that he must meet the prospective reader at the threshold, and in some fashion prepare him for the disappointment that is to follow. I omit from the present volume any form of preface, for two reasons—neither of which I feel called upon to give. To each reader I would say: "In thanking you for your flattering request I must here express my regret that I am unable to avail myself of your offer, as I shall be occupied for several months preparing manuscripts." H. J. Anonymous

THE CAR THAT HAS MADE ITS NAME
STRICTLY UPON ITS PROVEN MERITS

Harim Car

THERE IS BUT ONE DECISIVE TEST OF MOTOR CARS, THAT BEING THE RIGID TEST OF SERVICE

The Finest Car for Service

YOU are hereby invited to view this year's models of the new Harim Car and the several designs of coach, touring and roadster bodies now shown at our exhibition in the Arcade Garages, corner of Stevenson and Thielman streets. Those who are satisfied only with the highest type of automobile use the Harim exclusively. The newest model Harim Car is especially complete in its equipment and is as satisfactory a car as the market affords the automobile enthusiast. The body is made entirely of aluminum, thereby reducing its weight and making it lighter than all other cars of this size and horsepower. The great advantage of this feature in power, speed, hill-climbing and in economical handling is evident. The car has been especially noted for its very smart appearance. It originally commended itself to a great number of our clients through this beauty of design and its refinement of detail. The equipment includes such appurtenances as silk curtains, electric dome lights, speaking tubes, cigar and ash tray, vanity case. The car for every occasion

KINDLY look over the enclosed account and if found to be correct oblige us with a prompt remittance. We are closing our books for the year, and require money to meet our own bills, which are very large and pressing. This account may seem small to you, but we have several hundred of them out and the total is a large sum to us. Hoping that this communication will receive your immediate consideration, we beg to remain

THE MODEL PRINTING COMPANY

?

Publicity

BRINGS THE BUYER IN TOUCH WITH THE MAKER

We Can Assist You to Introduce Your Goods

EVERY year you send out a dark blue catalogue which reposes on the shelf or in the book-case of your prospective customer along with four dark blue catalogues, six light brown ones three bright red ones and many others of various hues. What chance has your catalogue to sell goods? And now and then you get out a piece of advertising matter with nothing particularly distinctive or forcible about it. Advertising of that character is simply a waste of money. What you need is a series of bright, strong, snappy matter to go through the mails at regular intervals, thus keeping the merit of your goods up in front of the buyer's eye, and absolutely forcing him to order from your catalogue instead of the other one. We can do this in a manner that will produce results

Tours

TO EUROPE

These tours have been planned with the idea of giving the summer tourist a chance to visit almost every city of note in Europe, while, in addition, the itinerary also comprises a cruise on the Mediterranean, stopping at such places as Gibraltar, Malta and many prominent watering resorts along the coast. The commodious liners of the

Clark Steamship Company

are equipped with all the latest requisites for safety and comfort known to modern marine enterprise. Nothing is left undone to make these tours both enjoyable and instructive. Unusually low rates are in effect for these tours during the Summer. Arrangements for passage should be made at once to insure the most desirable quarters

BRIGHT TYPE DESIGNS FOR THE PRINTER PRODUCED ARTISTIC ADVERTISING PAGES

American line type is noted for original and effective characteristics by the leading printers and advertisers of this country and abroad. Every printer who knows the value of artistic advertising typography will surely appreciate the splendid type faces recently brought out

14 Point — 14 A $1 45 28 a $1 55 $3 00

SOME PLEASING DESIGNS IN BORDERS AND ORNAMENTS

In addition to the large and varied assortment of type designs made by this Company the printer can also be supplied with the most artistic line of modern decorative material

8 Point — 24 A $1 10 47 a $1 15 $2 25

VITALIZE YOUR BUSINESS BY KEEPING YOUR TYPE STYLES ALIVE AND ACTIVE

New and original type faces stimulate orders for the printer. When the printer puts in a new face he knows he has something good to offer his customers, and this thought puts snap and ginger into his own thoughts and actions. In short, he gets a hustle on him, and business comes easier and more profitable. Type is the life-blood of the printing office, and the wise printer of today does not allow his type styles

12 Point — 17 A $1 35 35 a $1 40 $2 75

POPULAR AMERICAN LINE TYPES ARE PROFITABLE AND PLEASING

The most important factor in building up a successful printing business is the type It is the lever which stimulates or retards the growth of an establishment. In many plants the types are put on the same par as the collective art knowledge, experience and brains of the $1234567890 organization

6 Point — 25 A $0 95 50 a $1 05 $2 00

STRIKING EFFECTS SECURED WITH MODERN TYPE DESIGNS AND DECORATIVE MATERIAL

In most cases type should be purchased in families, in complete series and in large fonts. A great variety of unrelated types in small fonts is expensive to buy and expensive to use. Printers will get better and quicker results with large fonts of a few well-selected series of related styles than with a miscellaneous assortment of faces never intended to be used together, and with which good results are obtainable only by exercising a great amount of time-absorbing care. Simplify your type selection. Fewer faces and bigger fonts is the economic policy. Old material should be discarded without qualms whether it be cases, racks, type or what not, since it costs more to keep such material $1234567890 than to discard it

10 Point — 19 A $1 20 38 a $1 30 $2 50

OBSERVING PRINTERS CONTINUE THE DEMAND FOR DISTINCTIVE FASHIONS

The type founder who produces a distinct and pleasing type face not only stimulates the type business but vastly stimulates the demand for printing. Such an addition to a printing plant is equal, at least, to the accession to the staff of a successful designer, and each new type face gives impetus to the printing business just as each brainy addition to the printer's staff does

5 Point — 24 A $0 95 48 a $1 05 $2 00

THE TYPES THAT MAKE PRINTING POPULAR, BEING A SIMPLE STATEMENT OF FACTS KNOWN TO PRINTERS

The great type designs originated by this Company have captured the advertising genius of the country. The many new type faces recently brought out in related families have an immense potency in advertising. It has become worth while, necessary, in fact, for the advertisers to study type-design, and that study has cultivated a demand for printing millions of dollars' worth more than could have been the case if the American Type Founders Company had not reformed typographic design. Its influence has been apparent abroad as well as in our own country, and now America, through its greatest type foundry, is acknowledged leader of type-fashions. The typefounder who perfects a successful type-face not only aids his own business, but helps the business of printers who use that face. If we examine the pages of our great magazines or the fine catalogues of the present period, we will observe them all using the type families mentioned above. The printer is wise that uses them

HART SHINE IS THE BEST SILVER CLEANER

Royal Silver of Louis XIV

JAMES B. HART COMPANY
SILVERSMITHS

Louis Fourteenth surrounded himself with masters of every art and craft. He stimulated them to do their best by very lavish payments of money. Under such a royal master these men made his reign famous for its splendor. It was an age of magnificence. Today we show that seventeenth century magnificence interpreted in sterling silverware in the style of Louis XIV The effect is exceedingly impressive with a massiveness and grandeur seldom seen. In an examination of our silverware there will be found designs adapted to different periods

INTERESTING HINTS IN REGARD TO THE ROLL-FRONT

Case Rack

MANY printers have often desired to abandon the regular case racks and substitute a cabinet, thus increasing the life of the type by having it free from dust

The new Roll-Front Case Racks solve the problem, as they are equal to cabinets in every way. They are made of ash, finished in bright antique oak

The Roll-Front Case Racks are fitted with steel runs and are thoroughly manufactured in every way. Have a fine brass desk lock in center and a single key secures the entire tier of cases. For further information write to nearest House of the American Type Founders Co., Selling Agent

THE COLONIZING OF PLYMOUTH ROCK

MOST noteworthy of all was the colony planted at Plymouth, Massachusetts, on December 20. This was established by Englishmen belonging to the Congregational Church. They had been persecuted in England because of their dissent from the established church, and first sought a place of refuge in Holland. Shortly after they came to America to organize a colony where they might have freedom to worship God according to the dictates of their own consciences. They sailed from Plymouth, in England, on September 16, 1620, in the ship Mayflower, and reached the American coast on December 20; for several months they had great hardships to endure, and many of them died. The survivors persevered and made a permanent settlement which finally became the most important of all the English colonies in America. At first they got along in friendly fashion with the Indians, especially with the great Samoset and Massasoit. But the son of the latter, King Philip, was their deadly foe. A bitter war was waged with him which ended with his death and the dispersion of his tribe. Colonies were planted by the Swedes in Delaware, but these, together with the Dutch colonies, presently went into the hands of the English as spoils of war, and all the North Atlantic Coast as far south as Florida, which Spain held, became English territory. As already stated, Virginia was settled at Jamestown in 1607, and it may be added that negro slavery was introduced into the North American colonies there in 1620. New York was settled by the Dutch at New York—then called New Amsterdam—and Albany, in 1614. It was taken by the English who changed its name to the present form in 1664. Massachusetts was settled at Plymouth in 1620 by English Puritans. New Hampshire was settled by the English in 1628. New Jersey was settled by the

GREATEST FICTION DEALERS IN THE SOUTHERN STATES

The Heritage of the Wilderness

By William Taylor Bly
Author of Mountaineer

"An appealing love story, chaste as the far water brooks," says a critic of this new novel, "in which the curtain is raised on a scene hitherto unexplored by American writers." The Tribune adds this comment: "It is a strong story, rich with life and mixed with color. You will like it much"

Pearl

By the Renowned Hattie Courtwright

A love story of real life, true and sympathetic as Miss Courtwright's early stories of New England life always were. A picture of every day human nature without gleam of pretense, varied by the complex incidents and suspended interest of diversified romance, and full of humor. It is the kind of story to bring laughter and tears aplenty

Mark

By Heusinger Doer A Popular Author

The hero is also the villain in this wonderful romance. The startling novelty of the plot and the charm of the love story have called forth a chorus of praise, swelling across the country and echoing beyond the ocean into the English press. Quite without exception they say this story is better than "Amber Grove," and still more interesting

The Court of His Royal Majesty

By Nathan Bauman
The Great Historian

This brilliant historical novel, woven about the infamous yet interesting Borge family, which completes Mr. Bauman's Italian trilogy, in which "Casdel de Nuvio" and "The Rascal of Rome" have already been published, is unequalled by modern writers of fiction. Illustrations by Norman

HENDER AND KEMINTON STREETS, MOBILE

WINTER NEWSPAPER SYNDICATE

Remarks made By a General Advertising Solicitor

WHY it happened I cannot explain, but wherever I found a daily newspaper published by the well-known Winter Syndicate there was something that made me recognize it as being a newspaper of higher grade than any other that was published in the same town. This was an off-hand remark made by an experienced advertising man who had been making a visit to the cities in Iowa, and it suggested the popular interest which might be felt in this story of the Winter Syndicate and the quality which entitles it to claim "If it is a Winter Syndicate paper it is the best paper." The beginning of this powerful Winter Syndicate took place some time ago when Mr. W. Winter purchased *The Review* at Ottumwa, Iowa. *The Review* at that time was a daily and had a circulation of five hundred copies. By strenuous work and in the face of capable and active competition, Mr. Winter brought it up to a bona fide circulation of twelve thousand daily and weekly. Mr. A. Winter then went to Lafayette, Iowa, and purchased *The Sun*, of that town, and *The Observer*, of Mineola, Iowa, a few years later, a newspaper owned and edited by his brother-in-law, and on which Mr. A. Winter received his training. Early in the present year two other properties were added to

CLEARFACE BOLD BECOMES MORE POPULAR EACH DAY TO USERS OF DISTINCT PRINTING

This beautiful type design commands the attention of the reader's eye wherever displayed. As is signified by the name it possesses the exquisite feature of clearness together with the desirable character of boldness. The combination makes it a series which advertisers desire

14 Point — 14 A $1 40 29 a $1 60 $3 00

HANDSOME AMERICAN FACES PURCHASED BY BEST PLANT

Harmony and symmetry are the two principles that govern a standard of typography. The blending of types, borders and ornaments in one group always produces an agreeable effect

8 Point — 22 A $1 05 46 a $1 20 $2 25

PRACTICAL SELECTIONS BECOME EASY BEAUTIFUL DESIGNS CAREFULLY MADE

Clearface Bold has been in conspicuous service in nearly every modern printing office; today it is one of the most popular faces on the market. Its great legibility together with its refined and graceful shape makes it preferable to faces less easily read. Clearface Bold is a standard for a fashion in type, and all printers who use it will unhesitatingly testify to its serviceableness as a display letter for any general printing purpose

12 Point — 16 A $1 30 35 a $1 45 $2 75

MODERN SPECIMENS PLEASE MANY OLDER TYPOGRAPHICAL STUDENTS

Strange to say there are no rules by which good taste in typography may be governed even today. Every printer has his own style and exercises his own sweet will. Often he adopts the suggestion of a customer which may be entirely out of harmony. A printer should study $1234567890 the specimens

6 Point — 25 A $0 95 50 a $1 05 $2 00

PRINTING MATERIAL PROCURED FOR WORKERS IN LARGEST FONTS AT OUR BODY TYPE PRICES

During the past year many changes have been observed in the advertising field. There is a tendency toward more conservative tones in the advertising literature of largest commercial institutions. The changes have been brought around largely by a fuller appreciation of the importance of the advertising department. Managers of great houses where business on a large scale is conducted are realizing that the printed column, or page, or booklet has a large influence in determining the future of the establishment using it. And as a natural outgrowth, greatest care must be taken in the selection of men entrusted with preparing the literature intended to bring to the house it represents not only profit, but a $1234567890 good name that will

10 Point — 19 A $1 20 38 a $1 30 $2 50

ATTRACTIVE STYLE DELIGHTED EVERY PURCHASER DESIRING THE BEST WORK

Look over your stock of type, and whenever you find any with the undisturbed dust of weeks on it you may as well throw it out since it does not pay dividends. Attractive type styles that please your patrons and increase your trade are goods that pay the dividend on the investment. When in the market for material remember American Type Founders Company quality is the very best

5 Point — 23 A $0 95 47 a $1 05 $2 00

FREQUENT CHANGES NOTED IN ADVERTISING METHODS WHICH BENEFITED BOTH ADVERTISER AND PUBLISHER

The success or failure of printing is steadily becoming more and more dependent upon the design as used in a broad sense. Design includes the primary outline or main purpose and all elements by which printing is made efficient. It therefore contains the insight into general business conditions and specifically into the business which is to be directly served. Design is the arrangement. It is the reasonable and practical adjustment of all the mechanical and the esthetic qualities that produce the greatest results in competition with all of the rest of the world's products. It is one man or one establishment against all the rest. Design in printing is the element which combines imagination, taste and skill to produce a desired as well as definite result. The printing industry may be termed the barometer of most commercial prosperity. It differs from all other industries in that it deals in every calling and is closely identified with the prosperity of each. One must advertise to become known

Meint & Son

SIXTH AVENUE AND EIGHTH STREET

ENTERING upon our thirty-sixth year of continuous business in the Carriage and Harness trade, we seize this opportunity to thank our great army of customers for their patronage in the past and hope for a continuance of it in the future. As we look back through the vista of former years and note the many obstacles which have been so successfully encountered, it is with a feeling of supreme contentment that we look forward to the shadowy future waiting to grasp the triumphs which are yet to come. Realizing that Character, combined with Honesty, is the only foundation on which to build a business edifice, we have always in the past, and will in the future, endeavor to keep that ideal ever in view. Having been continually surrounded by the most original designers and also the most skillful workmen that this country could produce, our efforts to meet the ever changing demand for vehicles of every description have invariably been successful. Our facilities for handling work of this nature are second to none, and it is with a feeling of pride that we invite our patrons and the general public to pay us a visit and satisfy themselves that our assertions are well founded. When we saw it was impossible to turn out work quickly enough in our old quarters we immediately located in the modern and up-to-date new building at the above address. Occupying fully four blocks of floor space we are now in a position to cater to the demands of the public in a business-like manner. For the benefit of our numerous customers who reside out of town and find it

THE HEALTH RESORT

Some people have ofttimes wondered at the custom of their friends in going, year after year, to the same old resort. But where this fine resort happens to be in the highlands of Glendalen, the wonder promptly begins to cease, and these very same people, after they have had a trial trip, become just as devoted to the charm of the region. Glendalen is by far the most popular resort in this section of the country because of its high altitude and its surrounding groves of pine trees and the great ocean bordering directly on the south. Health and rest are positively assured here

Typographical Designing

By HENRY WARD BRIGHTON

HOW many printers have been ruined by hap-hazard and loose business methods. Lack of proper methods in the composing room are likely to lead to serious losses. All jobs given to a compositor without definite instructions as to style, opens up an element of doubt as to the result. This uncertainty continues until the proof is taken, and if this happens to be unsatisfactory ther

generally sufficient for design
odern style and also a distinct
demand for more real and in-
intricate design, taking hours to compose, additional hours to justify on the stone, and more hours to make ready properly, all at a great expense, is giving way to the simple and dignified type-design with which the color of stock and ink all harmonize into making a beautiful and attractive piece of printing and advertising. The designer realizes that often a single embellished line of type, properly atmosphered with the stock and color, is far stronger than the most labored efforts requiring hours of time in the composing room. It costs much less to produce and creates greater profit for the printer. Another great weakness of the plan of leaving the copy to the compositor's ideas is his lack of familiarity with the innumerable subjects he is compelled to handle in a day's work. He is but human, and it is very unreasonable to expect him to be familiar with all the various themes he puts into type. Not being very conversant with the subjects, how can he be expected to bring out the strong selling points and thus create real strong advertising? The natural result is inane and poor advertising, about which the customer storms and for which the compositor is unjustly blamed. The question immediately arises: Is the typographical designer any more conversant with all these varied subjects than the compositor? He is not. But he has one great advantage over

Hotel Elizabeth

BROADWAY AND HURON STREET

CHICAGO

This is the newest and one of the greatest hotels in America. Hotel Elizabeth is a two million dollar structure, at the apex of the busiest section of Broadway, embodying in every feature the important idea of doing everything perfectly. It is the only hotel in this great city that caters exclusively to the women folks, thus enabling them to secure accommodations which are pleasant and entirely free from the annoying and very objectionable scrutiny of a curious throng in the lobbies and corridors. There is the rare quality of perfect taste, as well as of richness, permeating the whole house. The restaurant is the finest in this city, or in all America. The dignified, quiet comfort, the restful repose, the tasteful furnishings of the sleeping rooms, the reception and the reading rooms are similarly characteristic

SOMETHING ABOUT

HAMILTON

Printing-Office Furniture

WHAT we have done for others we can accomplish in any printing office where the furniture equipment has not been modernized. It is a fact that printers are most conservative in changing their equipment. At the present time there are hundreds of composing-rooms where, with a small investment in new furniture requiring less outlay than the purchase of a new cylinder press, a saving could be made amounting to from 10 to 20 per cent in labor, and from 20 to 30 per cent in floor space.

AMERICAN TYPE FOUNDERS COMPANY

CONVENIENTLY LOCATED SELLING HOUSES

NUMEROUS OUTLINES OF HISTORY ILLUSTRATED BY PROMINENT PROFESSORS OF SEVERAL UNIVERSITIES
Since all immemorial, historic places have had their round of sight seers from every nation, so Pottstown with all its points of interest excites the traveler to press onward with tireless energy to reach the goal of his ambition, that is, to see everything. In the space eastward of the celebrated Casino stands the Coliseum Theatre, which became the boast of Pottstown and the world. $1234567890

Investments

A GOOD INVESTMENT IS EQUIVALENT TO A WHOLE LIFE OF ARDUOUS LABOR

OU are the very man with whom we wish to talk; you have something you wish to invest, you want to invest it where it will bring you the largest profits. You know, however, that $100 or even $500 is not sufficient capital to make you a fortune, if you depend on interest rates. People don't get wealth by hard work. Pinching and saving is not the profitable way. Yet if $100 or $1,000 is placed in the safest of all investments—Lewiston Park Real Estate—where values have a habit of doubling over night, there is a positive assurance of its reaping for you an immense percentage of profit in return. We have managed and placed small investments for a great number of men and women, having made from 100 to 1,000 per cent profit in the past three months, which has placed them upon a solid basis of practical affluence. To secure an interest in this quick money maker, very prompt action is necessary.

The First Ancient Patriotic *and* Folk

SONGS

of **Great Britain** *and* **Ireland** as sung by **Bards** and **Minstrels** in **Saxon, Gaelic** and **Cymric** tongues, now Translated

Under *the* Patronage *of* H. M. George III

FAVOURED by the *patronage* of His Gracious Majesty and the Ancient Nobility and Clerical Highnesses of these Realms, some *Scholars* of great wisdom relating to **Minstrel Lore** in this volume have revived for the use of all Right True and Loyal Subjects of our Sovereign Master many of the *Sacerdotal*, *Chivalric* and *Mystic Songs* and *Poetical Recitals* which in the olden times cheered and inspired alike the Warlike Camps and Peaceful Gatherings in Castle, Abbey, Palace and Manor Hall. These **Minstrelsies**, the Inspirations of our ancient National Prowess, are now printed for the first time and made available as household treasures in patriotic homes.

Northland Technical School for Designers

New Course in the Graphic Arts

The new course of instruction in the Graphic Arts will include Composition, Proofreading, Lettering, Writing of Copy and Practical Engraving. Instruction is given by correspondence, every lesson of the course receiving individual attention from the instructors. Through it the new and most approved educational methods are now applied to the Graphic Arts. Students are taught the reason why of good composition. All the principles of design and color harmony are applied to typography in a scientific manner. The twelve lessons in Lettering will meet the ever increasing demand for this work and it is a special feature

Lessons in Lettering

present the subject in a new manner and give the information desired in the most useful way. They deal with methods of reproduction and give ideas that facilitate work. Send for full information and sample lessons

Read this letter from one man who graduated after taking a course of study in Decorative Design. "The course is of the highest class and has proved to be of inestimable value to me in my work. Every lesson is so instructive that the study hour is a pleasure. It gave me much that could not be secured from any other source. As an investment it certainly wins. I now make double my previous pay"

Silver of Quality

KING Louis XIV of France attached to his royal court the masters of every art and craft. He stimulated them to do their best by liberal rewards of money and extension of royal favors and the wisdom of this liberal policy was immediately seen in their work

Vauban was his engineer, Mansart built his palaces,
LeBrun adorned them, LeNotre laid out his gardens,
Gobelins wove his tapestry, Boule was his cabinet-maker,
Watteau painted his pictures, Ballin was his metal worker.

Under such a master these men made his reign famous for its splendor. It was an age of Magnificence. Today we interpret that seventeenth century magnificence in Kormens Solid Silverware in the Louis XIV style and the effect is exceedingly grand, with an impressive massiveness and richness seldom seen in modern times

In an examination of Kormens Silverware there will be found designs adapted to the different historical periods of the seventeenth and eighteenth centuries. Kormens Silverware is recognized by its superiority and may be obtained of leading jewelers everywhere

Elements of Design in Decoration of Covers

THERE IS ONE VERY NOTED CHARACTERISTIC OF COVER DECORATION THAT SETS IT APART FROM MOST OTHER DEPARTMENTS IN DESIGN

IT is not unnatural when we consider what the principal function of the cover of a book has grown to be in its evolution from just a simple protective case; and surely, apart from extremely plain-lettered covers, there is more to be said in favor of a cover that serves in some way to suggest the character of the contents of a book than of one that only embodies a scheme of a purely formal line of decoration without any reference to what is contained within. The usual difficulty with many symbolic covers (a difficulty which has led us occasionally to emphasize, at their expense, covers of a more formal type) is that they, and the artists that design them, very often try to symbolize too much. It is a fundamental rule that no element of reality may enter into a scheme of decorative composition without undergoing such modification of its parts as may be necessary to bring it into relation to other elements in design

CHAPTER VI

IN October of that year, Fred Furlman was at a post of the Harlem Bay Company when the news came that a large body of English settlers was at hand. He saw at once what this meant. With only a few hours' preparation he set off on horseback, determined to go to Washington. He meant to see Mr. Webber to tell him how possible it was for the United States to occupy Oregon, and so to prevent him from making a treaty which should surrender that country.

With a companion and a guide he left the neighborhood of what is now Walla-Walla. It was a terrible ride. Exactly three months afterwards he was at Santa Fe, having braved the ice

COLOR IN ADVERTISING

THE attractive power of many good advertisements is ofttimes greatly increased by the use of proper color. From the standpoint of the reader, the right use of that color is of primary importance. As it will probably command his attention, it is important that color should attract, not repel. Strong color used without discretion calls attention to itself, not to the advertisement. Color that is carefully harmonized and used very discriminatingly with regard to the amount and its distribution will help to retain attention and concentrate it upon the important matter in the advertisement. One is an index finger pointing out and making clearer the way to the pith of the advertisement and the other an obstruction beyond which numerous readers never pass

Empire Border

THE FISHING SONG

Down in the wide, gray river
The current is sweeping strong;
Over the wide, gray river
Floats the fisherman's song.

The oar-stroke times the singing,
The song falls with the oar;
And an echo in both is ringing,
I thought to hear no more.

Out of a deeper current
The song brings back to me
A cry from mortal silence
Of mortal agony.

Life that was spent and vanished,
Love that had died of wrong,
Hearts that are dead in living,
Come back in the fisherman's song.

With the rude strain swelling, sinking,
In the cadence of days gone by,
As the oar, from the water drinking,
Ripples the mirrored sky.

Yet the soul hath life diviner;
Its past returns no more,
But in echoes, that answer the minor
Of the boat-song, from the shore.

And the ways of God are darkness;
His judgment waiteth long;
He breaks the heart of a woman
With a fisherman's careless song.

Madison Avenue and Bard Street

WE wish to call your attention to the special display which we are now making of new fall and winter fancy dress materials. This display comprises the choicest patterns of the leading European manufacturers and was personally selected by our own expert representative. An early inspection will assure you of the opportunities to be derived from this display

LONG ISLAND RESORTS

Where to go?

Where is the best place to go this summer? Is there a well-conducted city home in America where this welcome yet puzzling question has not awakened interest and brightened the eyes of all within range?

Now if the fourth and fifth words are accented there is only one answer—LONG ISLAND. There is no place where you can have so much comfort or such good sport as on Long Island. "Everyone knows Long Island," you say? Yes. You know there is a Long Island. You know of thousands living there. Hundreds of thousands summer there. But you don't realize its varied charms have brought to its hospitality many more

Island of Pastimes

pleasure-seekers than go to any of the other sections or resorts. Isn't it worth your while to investigate and prove the worth of such evidence yourself—by personal experience? Think and read on.

This is for those who do not know exactly what Long Island is today. Long Island is the largest island on the eastern coast of the United States—123 miles long and from 15 to 25 miles wide, with a coast line of over 400 miles. Long Island's physical contour and geographical location are such that it receives the maximum of the ocean's cooling breezes. These remarkably steady winds in the summer come from the south, direct from the ocean—pure, life-giving and rich in ozone

FREDERICK DOUGLASS AT BUREN DECORATION DAY

FRIENDS and Fellow Citizens. Tarry here for a moment. My words shall be few and simple. The solemn rites of this hour and place call for no lengthened speech. There is, in the air of this resting-ground of the unknown dead, a silent, subtle and all-pervading influence, more touching, impressive, and thrilling than living lips do ever utter. Into the measureless depths of every loyal soul it is now whispering lessons of all that is precious, priceless, holiest, and most enduring in human existence.

Dark and sad would be the hour to this nation when it failed to pay grateful homage to its greatest benefactors. The offering we bring today is due alike to the patriot soldier dead and their noble comrades who still live; for, whether living or dead, whether in time or eternity, the loyal soldiers who imperiled all for country and freedom become one and inseparable. Those unknown heroes whose

THE OFFICE BOY

O, joy supreme! Say, talk about your happy kids, well, maybe I ain't the real little cherub of sunshine. Le' me tell you the cause of all this happiness. You know how nice the weather has been lately, well, it does make a fellow feel pretty peevish when he has to stick in an office while all the other kids are out playin' ball or swimmin'. Well, day before yesterday I sure did have 'em. I felt just about as gloomy as Dr. Koch when he got that Kopenhaden report. Well, just as I was ready to do something rash, I hear three buzzes. Now, of course, three buzzes that's my signal to hot foot it into the boss' office, so I bolts in expectin' to find the next atmosphere rather chilly and I also had a hunch that I was due for a very good bawling out. But instead of t stare, there sat his nibs waitin with a big broad smile. Now the boss isn't a chronic grouch

THE KIND OF MEN TO HIRE

RECIPE for picking out the best business executives furnished by a writer for a large phrenological journal, whose definition about an executive is "an indoor business man." In the hope that his rules may prove valuable to the business world generally, a few extracts are quoted: "An employer who wishes to select an indoor business man needs a person who has the vital temperament, one who also has the following faculties always present: Casualty, comparison, order, human nature, calculation, secretiveness, conscientiousness and veneration.

"The head of an indoor business man will consequently be broad in the upper part of the forehead, and

The Portland

Multiple Punching Machine

HOLES punched any distance apart from 1⅛ to 24 inches. Any number of holes punched at once, to full capacity of machine. An endless variety of punching, and absolutely accurate. Very rapid. Best system of gauges yet devised; two micrometric back gauges which can be set in any desired position and adjusted to the hundredth part of an inch. Specially constructed side gauge allows use of full length 30-inch table. Graduated rule, 30 inches long, is inlaid in table. Drawer under punches, into which paper punchings drop, preventing litter around the machine. Fourteen sizes of round punches furnished from three thirty-seconds of an inch up, graduated by thirty-seconds

Foot-power with side gauge and micrometric back gauges. Is also supplied with steam fixtures and noiseless power clutch, another of the new and original features of this remarkably efficient machine

Not only is the first cost of these machines very much less than other multiple punching machines, but the price of hunch heads is also a great deal lower. Any size and style of punch head made to order on short notice. When you purchase a "Portland" you make a large saving and continue to save every time you add a punch head. You could not purchase a better punching machine than the "Portland" if you paid twice as much for it. This is a generally recognized fact

For full particulars and prices inquire of any branch of the

American Type Founders Co.

FIFTIETH ANNUAL SALE OF

"Bubrand" Scarfs

CONSISTING OF MANY NEAT AND NOBBY DESIGNS FOR THE CRITICAL CUSTOMER

Fifteen hundred fine scarfs, variety of which is great, embracing eight plain colors, an almost endless combination in stripe and neat effects on dark and medium grounds. This stock is made of best domestic and imported silks in reps, satins, amures and surahs. An ideal assortment affording a very wide range of selection. When you examine these scarfs, take particular notice that they have the wide, open ends. They are a manufacturer's stock, and made to sell at prices from 50 cents to $1.00

Economy in price has not been offset by economy in material. These scarfs are in every respect all that we aver. They are the best value in this city today at **25c**

ENGRAVER
PRINTER
BINDER

The few circulars sent forth from this modern printing office merely made known its aim and purpose. It was too early then to speak with authority of its accomplishments and cite reasons why you should grant it favor or patronage. The sturdy ideal for which it stands has met success from the very outset and we have had three years as one busy season. In this time we have executed our work in such a manner that we feel proud, and contained in our books of samples are many interesting specimens of good printing. The object of this effort is to establish closer relationship with all our friends and patrons here

Thoroughmade Clothes are like a Thoroughbred Horse

Back of each there must be a strictly unblemished pedigree without which there is neither the thorough breeding of a horse nor the thorough making of clothes. Strip check-rein and trappings off an ill-bred horse and straightway he droops into dispirited cobship. Put an ill-made suit on a live man and send it through a rainstorm, and it wilts into forlorn swathing. When a man makes a purchase of clothing he should be sure that the garments are backed by a real pedigree—blue-blooded clothes

American Type Founders Company

LEADER OF FASHIONABLE TYPE STYLES

The type, borders, ornaments and other printing materials made by this Company excel in design, and their durability is assured by practical use of the best ingredients for their respective requirements. The printing office equipped with its productions is worth more for either use or sale than one made up from the materials of incomplete type foundries

Twentieth Century Ornament

A Virile Story of Wild Life

By H. B. GREN

IN the Alaskan goldfields Gren has shared the wilderness life of hunters, ranchmen, hostile Indians and Mormons. His hero is saved from a lone death in the desert, rides, fights and loves with the people who have so gallantly taken him in. Their leader, the giant patriarch of the vast Purple Desert, is more typical of his time and place than any character in fiction. The earnest taming of the wild horse Silvermane, the quest for Mescal, the young girl of the sunset, through mirage and sand storm, are but two of the many thrilling events in its very finely written and illustrated chapters

Copyrighted and Published solely by

OUR SUMMER LIFE

Our Bird Friends out in the Garden

HOW we all love the first breath of spring. Then we are reminded of the many bright days that are coming. When spring has actually taken form and separated herself from the mists of melting snow, bringing Pandora's own box of mysteries for luggage, even the garden owner who has ceased to expect the miraculous to happen suddenly becomes alert, and is continually in the attitude known as nose to the wind in the lore of the wild. Which of the earth tribe that live by root, bulb and seed has survived the long winter? Who of the winged company have safely passed the perils of flight through storms and unfriendly lands? We walk along the paths and into the garden of our summer home and find answers on every side. Nesting places there are galore in tree, bush, briar-patch, and well-contrived houses that are gladly welcomed by our bird friends. Shed-beams are here for the Phoebes and snuggeries for House Wrens, a heap of cedar brush in farm land if the Carolina Wren is home-hunting; the Robins will find many home sites among the trees and roof nooks. A fine group of spruces on a knoll above the pool where in early spring the first peep of the Hyla is heard

Special Show Days for Fall

HAVING received large shipments of new goods purchased in New York last month, we desire to announce Wednesday, Thursday and Friday, October sixth, seventh and eighth, as formal Display Days in our Ready-to-Wear Department. On these three days it will be our pleasure to present for your consideration the most comprehensive exhibit of this season's modes in Best Fur Lined Empire and Paddock Coats, Fur and Feather Neck Pieces, Wash Silk and Cotton Tailored and Lingerie Waists, Street and Dress Skirts, Fine Tailored Street Suits, Negligee house Garments, Misses' and Children's Coats. The Kistler Store has long been recognized as the fashion center of South Olean, and in this special showing we are not going to display anything but the very latest in
hus retaining all styles
ladies will appreciate a
ttention has been given
were it not for this one
hion of New York City

WE RESPECTFULLY REQUEST YOU AND YOUR FRIENDS TO VISIT THIS STORE ON DAYS DEVOTED ENTIRELY TO THIS SPECIAL SHOWING. LIGHT LUNCH WILL BE SERVED IN THE WAITING ROOM ON THE THIRD FLOOR

WILL OPEN STORE ON ALL EVENINGS

SPRING PARK CLUB

The New Tennis Courts and Bowling Alleys at the Club are now completed and open to all members of the Spring Park Club and their families or friends. Every effort has been put forth to assure the success of this new feature, and everything has been so provided that the Club will prove a great attraction this coming season. This feature, combined with all the house privileges, makes a membership in this Club desirable, and it is hoped that all the members and friends will take such advantage of this out-door feature as will justify the addition of other and more extensive attractions

BRONZE MASTERPIECES

SOME years ago we started an effort to popularize in this city the best bronze work of America and Europe, and we now offer for your critical inspection the results of a carefully selected collection of masterpieces in sculpture of bronze of both American and foreign artists. These works are entirely original and have been highly commended by connoisseurs and art collectors both in this country and abroad. This exhibition is now in progress on the seventh floor and is the most notable one of its kind that has ever been held in America. The real significance of the present revival in bronze statuary will be at once apparent to the observant visitor at this exhibition. A visit from you will afford us much pleasure

To those of our patrons who are interested in this exhibition and find it inconvenient to attend in person, we have prepared a finely illustrated booklet which will be mailed on receipt of their address

Exhibition of Silverware and Cut Glass

The Burdock Company would respectfully call the attention of its patrons to a collection of silverware and cut glass, designed by and made under the direct supervision of Jean Renau, member of the Standard Academy of Design. This fine collection will be on exhibition, for a limited time only, at our Exhibit Hall on Second Avenue. The array will consist of spoons, forks and serving pieces, tea services and dinner ware, trays and bowls, etc. Cut glass decanters, whiskey jugs, and silver mounted vases, etc. Card cases, cigarette and cigar cases, pocket knives, match boxes and desk fittings.

The Constitution of the United States of America

Done in a Convention of the Thirteen States

PHILADELPHIA:

IN THE TWELFTH YEAR OF THE UNITED STATES

MDCCLXXXVII

WE, the People of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defence, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this CONSTITUTION for the United States of America.

ARTICLE I.

SECTION 1. All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

SECTION 2. The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for the electors of the most numerous branch of the State legislature.

International School of Printing
Fortieth Lesson

IDEAS OF BODONI ON PRINTING

Foreword

HIS NOTIONS about Typography are to the point: "The beauty of letters consists in their regularity, in their clearness, and in their conformity to the taste of the race, nation and age in which the work was first written, and finally in the grace of the characters, independent of time or place. Types should be suitably arranged on the pages in straight regular lines, not crowded, nor, in proportion to their height, too far apart, and with equal spaces between words and lines. The more classic the book, the more appropriate it is that the text should appear alone, in order that the beauty of the letters may be apparent. This is real art." Notwithstanding the many advances in printing and type making that have been made in modern times, these ideas of this old master printer still hold good. The School has taken great pains in the following pages to show a few Bodoni reproductions. The typographer of the twentieth century will find much in the simple styles of Giambattista Bodoni that is worthy of close study and emulation. This lesson will also prove of practical value on account of the increasing popularity of Bodoni types

This Instruction Paper is Strictly Confidential

Mankind and Education

A Book of Essays by JOHN FRANCIS CHESTERFIELD

WE are pleased to announce that this book is now ready: and we wish to say that it is the best we have yet offered, in fact it is one of the finest examples of bookmaking which has recently been produced. Even if this book had been in a language unknown to the reader it would be a delight to take it in hand and linger upon its typographical charms. It will satisfy the booklover who can appreciate the art of the craftsman, who was inspired by a high ideal, and worked in an atmosphere of harmony and good fellowship. Little need be said of the text of this book, for Chesterfield was one of America's foremost essayists, and MANKIND AND EDUCATION is one of his best books. These essays contain some of the most beautiful thoughts ever penned, and they are held as almost sacred by many readers. This book is printed on rich white, pure rag paper, from clear cut new type, with nature design in delicate tint on each page, title page and frontispiece carefully hand colored. There are about four hundred copies in substantial brown board binding, at one dollar each, and one hundred copies in full leather, at two dollars each.

PRINTING METHODS

IN THE TWENTIETH CENTURY

HITHERTO the expenditures for the composing room have been insignificent as compared with those in other departments. Under the method here outlined, composing room equipments, excluding types and linotypes, have ranged in cost from five thousand to eighteen thousand dollars. There has been a superstition among printers that the composing rooms did not pay. Facts show that the composing room with a cost system is the most profitable department. It has developed in the sale of specialized composing room outfits and the resulting increase in efficiency has almost always been a real source of agreeable surprise to every purchaser.

INCREASING TRADE

A SERIES OF EXAMPLES TAKEN FROM THE PRACTICAL TYPOGRAPHIC GUIDE

IN the last article, the ingredients of inks were discussed and now we come to the distributing end of the business. If the printer could so standardize all his work as to be able to buy regular inks in large lots from the manufacturer's stock, he would considerably reduce the cost of getting the ink to the user. This is probably impossible in a number of cases. Paper, presses, cuts, time requirements, and numerous other

The Growing Demand for Good Printing

GOOD work pays. The finest quality of printing, that which is used for advertising purposes, as well as the commercial forms, is the kind in which there is the most money for the advertiser and also for the firm producing such work. This growing demand for a better grade of printing is due to the fact that the public has at last awakened to the educational value of good printing. Now to do good work one must have good material, and the many beautiful

American Line Type Faces

which are shown in this catalogue will help wonderfully in producing this class of work. That the demand for high-grade work will continue to increase is a recognized fact, for the constant development of the esthetic sense in our educational institutions is bound to produce notable and lasting results. While we may not have passed through the era of cheapness, there is less desire for the cheap article than there was a few years ago, that is, if the low price is at the sacrifice of elegance, worth and good taste

BOYD'S HISTORY OF THE CIVIL WAR

This book has been pronounced by experts as the most exact record of the war between the North and South which has ever been placed on sale. Full details of the facts leading up to the great conflict are given, while the actual fighting is portrayed in a very interesting way

Elegance of the Bodoni Family

THE NEW TYPE FASHION

ANOTHER new and great type family is shown in this Specimen Book of Type Styles. The new Bodoni Type Family is going to be a long-lived fashion because the design is of classic simplicity, elegant, yet strong, and like all real works of art its beauty will be appreciated the more it is studied. Every printer will find it profitable to show Bodoni styles to the buyers of printing. The enterprising printers will be certain to reap a splendid crop of orders. It has been positively demonstrated that with the introduction of each successful Type Family the demand for printing has been both stimulated and increased. Those who pay for catalogues, booklets, circulars, and advertisements of every kind, are looking for new business attractors in types. When a great type design appears their interest in printed salesmanship is freshened and orders to the printers follow

THE LISTO PIANO

An Instrument of the Highest Grade

The familiar lines from Shakespeare's *Merchant of Venice* can be paraphrased thus, and still be fraught with equal truth: "The home that has no piano in its midst, nor is not moved with aspiration to possess one, is lacking in the fundamental instincts of culture and refinement." Because, to-day, the possession of a *fine* piano is not so much a question of money as it is of desire. For a **LISTO PIANO** is the *equal of any piano manufactured* and yet it can be purchased by payments as small as Five Dollars a month

AMERICAN

TYPE, BORDERS AND ORNAMENTS ARE IDEAL PRINTERDOM FASHION PLATES

NEW Type, Borders and Ornaments of the American Type Founders Company excel in design and their durability is assured by use of the best material procurable. The selection of designs and styles as brought out by this company surpasses in both variety and utility the combined product of all other type foundries. A printing office completely equipped with its productions is worth far more for either use or sale than one made up from the productions of other type foundries. It is conceded that American Type is the standard for excellence throughout the world. The up-to-date printer will secure a distinct advantage over his competitor by purchasing job type in weight fonts from this company. Buying in weight fonts means full cases, and full cases obviate the necessity of hunting for sorts, which is a very serious handicap in a composing room. It stands to reason that the printer who has full cases will derive a much larger profit from his work than his competitor who is continually picking sorts from the live jobs.

SCOTCH ROMAN

A beautiful book and job type with some characteristic features which make it a letter adaptable for all kinds of work. There are not many faces more available for all around use, and it will give an air of distinction to even the best of work.

Drawing and Designing

By HAROLD IRWIN BECHMAN, Art Instructor

A PRACTICAL treatise on the art of designing, drawing and illustrating in connection with typography. Contains concise and complete instructions, very lavishly illustrated, concerning the development of art as allied to printing and the typographical industry. The utility of this treatise to the student is manifest and the information which it imparts is bound to be of great benefit to the beginner as well as to the student who is well advanced in art

Our service to the community is threefold; we train the eyes and the hands of the children, and give them another means of expressing and recording what they see; we develop artistic quality in our national industries, and so promote the intellectual interests of the men and women employed in them; and we cultivate in the population at large the precious sense of beauty. Are not these worthy objects for the work of our lives?

IN MODERN JOB COMPOSITION
AND ADVERTISING LITERATURE

SOME years ago the prevailing methods among compositors to obtain desired emphasis in type display were eccentricity and harsh contrasts. Printers who study the needs of the advertiser realize that other methods must be used if real distinction is to be secured. There is such a volume of printing coming from many sources, both in literature and advertising, that the printer in order to make his work different and distinctive must use stylish and original type faces. The best proof of the intrinsic value of new faces to the printer is shown in the tremendous growth of the American Type Founders Company

If you would forge to the front, and advance in the world of printing you will add to your type equipment often

Columbia Watch Company

Corner Broadway and Forty-seventh Street

Kansas City, Missouri

WISHES to announce to the general public that the new Columbia-Nash Watch is now completed and ready for sale. This masterpiece of the watchmaker's art has been pronounced by experts to be the acme of perfection. All that skill and money can do to make a perfect timepiece has been done. There is no other watch at the price of the Columbia-Nash—$5.00 to $19.00—which will keep as good time, and there is no watch at any price that will keep more than a very small fraction better time. To get that infinitely small fraction of accuracy makes your watch cost about ten times as much as the Columbia-Nash, and that small fraction is not really of value in the day's work. In other words, a Columbia-Nash at, say $9.00, is a good enough watch for anybody. Why not pay us a visit and look them over

Buyers of Printing

JUST A FEW WORDS TO THE BUSINESS MAN WHO DESIRES TO HAVE HIS PRINTING PRODUCED ACCURATELY AND PROMPTLY

Wouldn't it be a great relief if you could say to your printer, "I need a catalogue, a circular, some letterheads and envelopes," and then be able to entirely dismiss the matter from your mind in the confidence that he will do the work to your entire satisfaction. The printer comes to you with a proposition that pleases; that has a strong advertising value in the suggested copy, in the proposed typography, in the color arrangement, and in the general layout. What a satisfaction to have an assured confidence that the finished product will meet with your approval

The printer who can do that for you must offer efficient service. That is what we are giving to our numerous customers, and we are ready to do the same for you

These Special Characters are furnished with each font, except the Ornament that being furnished with sizes from 6 to 12 Point inclusive.

THE SYNTHESIS OF QUALITY

CONSTRUCTION of the best grade, comprising material and workmanship; general fitness, with a complete knowledge of the art; the builder's integrity and ability of first order, and a design embodying an idea of the laws of motion, will, according to the immutable law of cause and effect make up a first-class piece of work of quality—in this case, a printing press, known to the trade the world over as a "Colt's Armory" Platen Printing, Scoring and Embossing Press. ¶ Judgment is a factor. A watch having an uncompensated balance wheel can readily be so finished that its cost would equal that of a Dent chronometer; yet as relates to its prime function, "it wad na be worth a tinker's dom!" It simply would be lacking quality. ¶ Then, if a platen is so controlled that, when impinging upon the form, to prevent it from transversing the arc of a curve it must be compelled by opposing means to move in a straight line, it is a hundred to one shot that the misalliance will not endure. That is, in its dominant principle it is deficient in quality. That's simple. ¶ Quality is relative. A mechanic might, with a hand tool, form a microscopic screw and the thread thus fashioned may compare favorably with that produced by precise mechanism; but, if time is considered, the manual method merely exhibits dexterity—like a Master Printer who successfully operates a Silurian machine.

Secure Quality if You Would Produce Quality

Contentment

Let us learn to be contented with what we have. Let us get rid of prejudices and false estimates, set up the higher ideals—a quiet home; vines of our own planting; a few books full of the inspiration of a genius; a few friends worthy of being loved and able to love us in turn; a hundred innocent pleasures that bring no pain or sorrow; devotion to the right that will never swerve; a simple religion empty of all bigotry, full of trust and hope and love—and to such a philosophy this world will give up all empty joy it has.

Best typography is getting away from all the eccentricity that was formerly being used, it being nearly eliminated; the circular should be easy to read and not be overcrowded with unnecessary ancient $1234567890 type faces

8 Point — 18 A $0 85 54 a $1 40 $2 25

MONSTER GATHERING WELCOME HEROINE
DASHING BEAUTIES CAUSING ADMIRATION
One would think that this great Company, with its infinite variety of faces, would rest content on its laurels and forego the trouble and expense of constantly issuing new faces. But this it must not and will not do. This Company knows that the printer is calling for new faces, because they bring him new customers and also hold his old ones. As long as this Company leads this branch of the printing industry, it will maintain custom

10 Point — 16 A $0 95 47 a $1 55 $2 50

HANDSOME DESIGNS RETURNED YESTERDAY
MANY NOTABLE GENTLEMEN RECEIVED PIES
The American Type Founders Company produced and sold many new faces, the total volume of its business increased; from this policy of increasing volume by giving the printer what he wanted, and decreasing cost of manufacture and an increasing excellence of the product was born the leadership

6 Point — 21 A $0 75 63 a $1 25 $2 00

SCORCHING AUTOMOBILE STRIKES TELEGRAPH POLE
SUPERB TYPE QUALITIES INTRODUCED EXTENSIVELY
The business men of the United States are better educated on type than are those of any other country in the world. The printing press of this country is educating everyone to demand better printing. Eccentricity of composition has been used so much, and so thoroughly tried out, that it has practically been relegated to the past as useless. Today and tomorrow call for plain, sane, easily-read composition, well printed. Since this kind of printing is almost standardized, the only way in which novelty and difference can be obtained is in the use of the newer display faces in their various sizes. Buying faces is a great $1234567890 help to the compositor

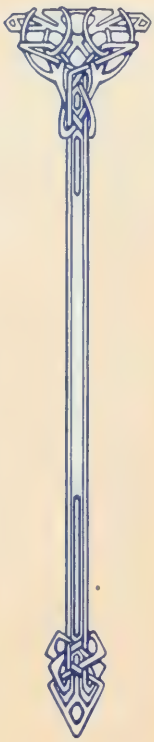
AND OTHER SUPPLIES



IT is fast coming to the point where the office with antiquated equipment will be so much handicapped that soon it will be impossible to show a profit on work produced under those conditions. Savings are being made in labor and floor space which must eventually influence and finally control prices of printing. One of the principal factors in the saving of labor as well as floor space is our line of Modernized Printing Office Furniture. Do you want to make a saving of 33 per cent. in labor and 50 per cent. in floor space? If so, immediately ask for more detailed information and booklet

PRINTING

EMBOSSING and DESIGNING

THERE is no other investment that brings such sure and constant profits as printed salesmanship as we do it. There is no other method of getting business so inexpensive. While you are thinking of our booklet you may be in need of billheads, letterheads, labels or receipt books. Now is the time to follow in the footsteps of that army of successful merchants who are, in making fortunes for themselves, building up the great printing industry so rapidly. Let us do your printing.

You Should Keep Your Policy In Force

"I thank you for the prompt payment of claim on my brother for $435," writes a Millertown beneficiary. "I was much surprised when the agent gave me a check for $20 more than the policy called for, because of a concession made to policyholders by The Hamberg. My brother was insured just a little over one year. I was going to let this policy lapse just two or three weeks ago, but your Assistant Superintendent spoke to me and showed me where it would help me out, in case my brother should die. I highly recommend The Hamberg Insurance Company to all those who are not insured."

The Hamberg

The time you think of letting a policy lapse is probably the time you are in need of it most

SQUABS

How to Raise Them

The demand for squabs by high class hotels and restaurants has been so insistent in late years that prices for this toothsome dainty have steadily advanced. Here is an unusual opportunity for anyone with a little time and patience to make money. The author of this book is a pioneer breeder and authority on this subject and he has explained all the essential details so clearly that anyone can

DOUGH *in* BAGS

Proprietors of printing establishments upon realizing the efficiency of the American Type Founders Company's service will not hesitate in employing it, thereby outwitting the other fellow in proficiency of workmanship as well as in superior quality of the finished product. These are the two most vital points of the business; they count from the very beginning. Upon them you must depend for success and filling of your doughbag, unless you are in business for pleasure. American line material always proves a good investment because of its customer-pleasing features. Besides, the prices are within reach of even the smallest purse. We help you to business success

The Colt's Armory Job Presses

INDISPENSABLE WHEN GOOD HALFTONE AND ABSOLUTE REGISTER WORK ARE NECESSARY

Among the heavy platen presses which are offered the printing trade for the best grade of printing the Colt's Armory Presses stand supreme. The printer who uses them thereby proclaims his superior status in the art. He has no annoying and expensive handicaps and can thus produce the very best of quality in the most economical manner. The demand for a press that will do heavy halftone printing, hot and cold embossing, paper-box cutting, and also high-grade job printing, is satisfactorily met by the Colt's Armory. Being well-known for their perfect construction and accurate results in color work, these presses are often supplanting less expensive and more lightly constructed presses in all offices where evenness of impression and absolute register are of paramount importance. No better impression or register can be obtained on any job press. As the largest buyers of Colt's Armory Presses the American Type Founders Company sells all sizes and styles to the best advantage of its customers. For terms and full details write our nearest Selling House

TYPOGRAPHY

AND THE ADVERTISING INSTINCT

HAVE you ever considered the relation of typesetting to advertising? One of the very best known advertising experts in the United States has paid as high as fifty dollars for setting up a single advertisement, the standard magazine page size. This man knows the value of correct typography. Years of analytical experience and careful tabulation of results has taught him that the pulling power of an advertisement can be doubled or trebled by correct typography. Shrewd advertising managers no longer hesitate to pay ten, fifteen, or twenty-five dollars for setting a single advertisement. They find it money well invested.

Correct typography involves first of all what might be called the advertising instinct. Just the ordinary "typesetting" is not typography in the sense here intended. A knowledge of advertising requirements is essential. A staff of high-priced competent compositors is also essential. For years we have made a leading specialty of graphic typography for advertisers. We put into our work the advertising instinct plus experience and knowledge of what is required.

KNIGHT

THE LAST WORD IN QUALITY

THE KNIGHT BROTHERS WERE PIONEERS IN SPECIAL PAPERS AND HAVE ALWAYS KEPT WELL IN THE LEAD IN NEW IDEAS

REPUTATION for good paper must rise or fall with the quality of the product. It is most important that we keep the quality of our paper above the average. This has been our object ever since we embarked in the paper business. The Knight Paper Company, with their well-known reputation for quality of product and business honesty, stands behind every sheet of KNIGHT PARCHMENT. It is the business paper for those who desire to give expression to all the highest commercial ideals. This paper combines the reliability of the ages with modern day progress. It is always the first choice of the printer's careful customer, and also the first choice of the discriminating buyers who appreciate quality. The printer will do well to show his customers this paper; it will mean a satisfied clientele and more profit. Send for our new and original sample book

DUKE BOND

We still carry a large stock of the famous Duke Bonds, all colors and weights. It is a very desirable paper stock for ordinary business forms

THE KNIGHT PAPER CO.

THE RELATION OF APPLIED DESIGN TO OUR MODERN INDUSTRIES

DELIGHT in the graceful line and well-balanced form are universally inborn. Regard for this has always been shown in utensils and in construction. To nearly every form of product, design of some kind expresses the degree of the designer's or workman's interest in his work and his conception of appropriateness. Doorways, windows, and the whole facade are appreciations of the purposes of the building and the abilities of the architect. Of the things that go into the house, furniture and utensils, there are the same elements of regard for beauty of form and appropriate decoration. In all industrial products, applied design has an especially prominent part in forming a practical product.

Forms of knives, forks, spoons and pitchers follow the general model, but the degree of interest and merit of the pattern depend on the decorative design that is used as well as on form. The different periods of ornament are used especially in this class of products, German, French and English models being most conspicuous, so that we have tableware, wallpaper, and furniture in which the design is held as closely as possible to the periods represented.

THE NEW IDEA OF THE MOIRBURGH BANKING CORPORATION

TO do the right thing, at the right time, in the right way; to do some things better than they were ever done before; to eliminate errors; to know both sides of the question; to be courteous; to be an example; to work for love of the work; to anticipate requirements; to develop resources; to recognize no impediments; to master circumstances; to act from reason rather than rule; to be satisfied with nothing short of perfection.

Oriental Carpets

NO WESTERNER NEED FARE TO NEW YORK TO SEE A FIRST-CLASS ASSORTMENT OF ORIENTAL WEAVES.

THEY ARE EXHIBITED HERE AT TEMPTING PRICES SUCH AS HAVE VERY RARELY BEEN APPROACHED BY OTHER DEALERS ANYWHERE IN THE COUNTRY

For Your Homes

It would startle the crafty dealers of the East to see a big stock of Oriental Carpets and the price of every piece marked in plain figures ❧ And you needn't cross the ocean to find other dealers who would be astonished to see such a thing. That isn't the way Oriental Weave is usually handled. But it's just the way that has lifted our Oriental Carpet business from the most modest to one of the greatest in the West ❧ We handle Orientals as we handle any other merchandise, because we know how to buy ❧ ❧

WE HAVE A VARIETY OF DESIGNS AND SIZES GREATER PERHAPS THAN EASTERN HOUSES. IF YOU ARE ANXIOUS TO SECURE ORIENTALS WHICH ARE MADE TO BEAR THE CLOSEST SCRUTINY, THIS IS A GOOD PLACE TO COME. GLAD TO ACCOMMODATE YOU AT ANY TIME

CRIXDON CAMERA
THE MOST SATISFACTORY AND CONVENIENT CAMERA FOR YOUR VACATION

Just the sort of camera for the beginner, because it is the easiest of all cameras to load and operate. And it is also an excellent camera for the most experienced because it will make pictures of as good quality as the larger cameras. Has automatic shutter and universal lens. It is the most compact camera in existence today

TILES IN THE BATH ROOM

FOR the floor and walls of a bath room the use of tiles should be considered by everyone who is building a home or who is planning to make alterations in his present home. The same set of conditions that demand exposed plumbing demand tile. Boxed-up plumbing was abandoned because it was a damp, dark breeding place for germs. The white surface of porcelain tubs and lavatories affords no place for germs to breed. The same is true of tile. The whiteness reveals dirt. If you could see the wooden floors of a bath room under a microscope you would be shocked. Wooden floors cannot be kept sanitary. The only impervious material that will really meet all conditions is tile. All substitutes are subject more or less to the conditions of wood. But the really important thing to know is that all of these substitutes cost more in the end than tile. Tile is the cheapest treatment for the floor and walls of the bathroom because once properly laid it lasts forever. It needs no replacing

We solicit correspondence with home owners, architects and contractors on the subject of using tile in building the home

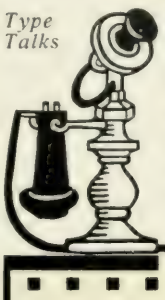
NEW ERAS

Mean Improved Methods

Type Talks



Every New Era in the world's history has been marked by a complete change in both the theories and methods of industry. This patent fact is well worth the consideration of all progressive printers. The ambition to advance, the desire to investigate, has made the world what it is today. Get on the wire

THE MESSAGE

At present we are in the midst of a new Business Era in which we have not, as yet, comprehended the important scope of our business literature. Printing is really a silent salesman and the use of the mails for business and advertising is as far removed from the old methods as the modern telephone is from the couriers of the ancients. Advertising to be attractive must have style and newness. These features are obtained through the use of an attractive type face and original elements of decoration. As a leader in stylish type faces the American Type Founders Company is classed alone

SPECIMENS

AS GOOD AS THESE ANY PRINTER CAN DO

THE trade magazines pertaining to the printing business, together with the fine specimen sheets that are issued so frequently by the American Type Founders Company, have become the principal mediums for demonstrating the possibilities of type, ink and paper from an artistic standpoint. These three forces depend each upon the other, but the effectiveness of this great combination rests mainly on the manufacture of the type; the quality of its metal and the beauty of its face being absolutely necessary to the completion of good work. The finest collection of type faces ever designed and cast are those originated and produced by artists and mechanics of the highest class in our employ. The successful printer of today is the one who is ever on the lookout for new methods for attracting the attention of the prospective customer, and once having him, by prompt and efficient service holding him. Discard the old types and methods and substitute our modern type faces and ornaments

FURNITURE FOR YOUR HOME
ALL OUR GOODS ARE PRICED

Craftsman Furniture is the leader now. It is made in such variety of pieces that a home can be furnished complete if desired. Single pieces may be bought, if preferred, with the assurance that other pieces to match can always be had. Craftsman furniture is built on simple, natural lines and will not change. Lasting as it does a lifetime, it comes to have sentimental value that can't be measured in terms of any one counting house

Rugs of Value

We wish to especially invite all prospective and all newly married people to see what an immense stock in fine rugs we carry. These rugs were purchased by our buyer, who just arrived from the east, and are special picks

AMERICAN TYPE EXCELS all others in durability and originality of design, also in readability, so essential to all advertisements. In some magazines occasionally we find engraved lettering. The general effect might perhaps be pleasing, but when you commence to read you find it difficult. The artist seems intent on making his letters ornate or queer. If he made them plain and readable his customers would see that he was giving them something they could get set in type at much cheaper prices

HOTEL SHERMIND

THE MOST CONVENIENTLY LOCATED HOTEL AND RESTAURANT FOR BOSTON'S BUSINESS MEN
CORNER OF EAST HENDERSON STREET AND MEDINGTON AVENUE, BOSTON, MASSACHUSETTS

FIRST CLASS RESTAURANT
AND GRILL ROOM

The Finest Hotel in Boston

Hotel Shermind is a million dollar structure at the very apex of Boston's busiest life, embodying in every feature the Shermind idea of always doing the thing perfectly. In architecture it is remarkable, even when considered as a hotel only. It is, first of all, a home hotel, where any gentleman of moderate means may bring his family at reasonable cost, and where there is all the privacy of the home. Its fame is perennial. But the dignified, quiet comfort, the air of repose, the tasteful furnishing of the sleeping rooms and even the halls are just as characteristic. Write for new Booklet

THE FIRST DAILY IN SPORTAGE COUNTY

SPORT

THE HERALD'S NEW BASEBALL SERVICE

THE Sportage Daily Herald will, commencing with the opening day of the Baseball season, inaugurate a Baseball News Bureau. This special department will collate the first records of the games as they are received from different centers and present them in a novel and complete form. The actual results of the day by this method will be seen at a glance. Our experienced writers will furnish in detail the fine points of each game and interesting comments on the great national sport will be printed daily

We show herewith a specimen of the score we will run at the top of our sporting page

Ponce	6	1	5	3	4	0	2	1	9	—31
Roscoe	9	1	2	8	5	3	7	3	x	—38

We have installed a special wire direct from the baseball grounds to provide our patrons with the entire score by innings which we will post on our bulletin board

THE HERALD

SPORTAGE, NEW YORK

BEST SPORTING PAPER IN THE WORLD

Department Store Initial — Baseball Figures — Baseball Series No. 3 — French Cast Squares

The Twentieth Century is a century of progress. The old world is throwing aside many of its foolish and absurd notions. This new industrial era means much to the printer. The liberal use of the mails for advertising; the increasing tendency of the higher professions to advertise; the literature necessary to promote and sell our many new inventions; the new demands being made for printing; all are grist for the printer's mill and he should be prepared to handle them

HOTEL BIRMINGTON

"ONE MINUTE FROM EVERYWHERE"

A three million dollar structure located at the very apex of Broadway's busiest life, embodying in every feature the one Birmington idea of doing everything in a perfect manner. It is, first of all, a home hotel, where gentlemen of moderate means may bring their families, and where the women folk are not subjected to the curious scrutiny of lobby-loungers

TOURING

A MAGAZINE FOR THE AUTOIST

NUMEROUS articles and illustrations of special interest to lovers of outdoor life as well as the enthusiastic automobilist will be found in the pages of this issue. Many valuable hints on cross-country touring in the different parts of America are offered by the country's best known writers on this subject. Under the title "Speed" is grouped practical information for the driver of a touring machine, giving a little advice on many subjects of great importance, based on comfort, safety, power, economy, buoyancy, speed and other matter of similar character. An interesting section on outdoor life has also been inserted, having come from the pen of our friend, Harry Georgeous

Thanks

We are thankful that in the regular order of our yearly program there is time to pause and think of the many things that we may be thankful for. We are above all else thankful for your patronage and for your faith in our ability to produce good printing. We are thankful that you have become a user of the KARN QUALITY and the hearty commendation of our numerous patrons has been a great source of encouragement to us. We are thankful that our business outlook for the coming year seems bright and promising

Your Printed Matter and Advertising Typography from Kinner

NEW methods in selling goods have revolutionized all of the business world during the last ten years. A prominent advertising expert struck twelve when he called Printing the "Silent Salesman." As a salesman Mr. Printing is a great success. He never misrepresents you and he never butts in when he isn't wanted. He can always wait until Mr. Prospect is ready. Unlike some salesmen he doesn't try to tell all he knows the first trip. He can call on another day for two cents. Now is the time to send your mail salesman out talking for Fall business. Let me dress him up for you. I have devoted many years to the study of his needs and know just what constitutes the strongest appeal in his whole attire

HOMES IN THE COUNTRY

GRASP THIS GREAT OPPORTUNITY TO SECURE ONE OF THESE FINE DWELLINGS

Paying Rent?

BY OUR ARRANGEMENT YOU CAN SOON OWN YOUR OWN HOME AND BECOME INDEPENDENT OF THE REGULAR VISITS OF RENT COLLECTORS

HOUSES of six, seven and eight rooms in Garfield County, all ready for you to move into. Each of these houses has all modern improvements; bath, toilet, running water, steam heater and gas. They are built on a plot of land 150x225 feet all graded, curbed and flagged. The high elevation of this property and its beautiful surroundings give to it the necessary features for the ideal location of a home in the open country. Fine railway connections and several very good roads make commutation a pleasure. The close proximity of Lake Wavecrest gives access to one of the most delightful bathing, boating and fishing resorts that will be found in this section of the country today. Send for booklet

The

Burk College

of Design

ARTISTS who received their training in this college are all holding responsible positions in the different designing and illustrating houses throughout the country. There is no other college in which the students' drawings are exactly the same as the practical work done in fashion and engraving houses and in the art departments of newspapers and magazines, and no other school which can get its students practically into the illustrating business

For tuition rates and particulars apply to

The Burk College of Arts & Crafts

REX THEATRE

CORNER KING AND MONROE STREETS

The ideal vaudeville theatre, designed and conducted for the entertainment of ladies and gentlemen. During the four years of its existence it has buried the ghost of decollete variety, enlisted and secured the support of real people, thus establishing a standard in operation and entertainment to which few theatres of any class ever attain. There is a reason. Success does not come by accident; we have earned success through careful management, always preserving an atmosphere of refinement, and then the best combination of stars and skilled entertainers that can be found in the world

WE PAY INTEREST

CAPITAL $25,000,000
SURPLUS $5,000,000

On all inactive or savings accounts we will pay interest twice a year, adding to deposits of this character three per cent. per annum—the earnings of your savings. This will make your money work and give you a safe, sound investment, backed by all the strength of this bank, without risk or trouble of any kind on your part. Better bank your savings than have them hidden around the house as bait for burglars. We guarantee absolute safety. Come in at your convenience and let us talk the matter over. We are always ready to open new accounts

JOHN C. HENDERSON, President
HENRY THORNE, Vice-President
FREDERICK KRAMLEER, Cashier

Private safes in our burglar and fireproof vaults are being rented rapidly by persons who appreciate the security and convenience obtainable for less than two cents a day. Don't delay; write for full information

RUDENKLEM MOTORS

MOTORS of this character are especially suited for being used upon rotary, web and cylinder presses, and for other classes of machinery requiring six horse power or more for operation. They are all of the multipolar type and have round cast-iron frames with feet for attachment to rail-base or brackets. Poles are of steel cast-welded into the frame and journal boxes are supported by three-arm bronze brackets attached to each side of the frame. Shaft bearings are of the RM kind

Our Motors are supplied with a nameplate "R" cast into frame and absolutely guaranteed for highest quality of material and efficient power

ESTABLISHED 1872

As pioneer makers of motors we have a great reputation to maintain. Quality and material of unequalled excellence are always embodied in each motor of our make

American Lead and Rule Cutters

THEY ARE GUARANTEED TO BE ABSOLUTELY ACCURATE AND WILL NOT GET OUT OF ORDER

RECENT improvements make American Lead and Rule Cutters the best on the market. In the new models it is impossible for the front or lower gauge to slip or be forced out of position in cutting heavy slugs or rules. The accurate register of the gauges is absolutely maintained. The novel methods of adjusting and locking the gauges, together with several other improvements, met with the immediate approval of leading printers everywhere, and today the American Lead and Rule Cutters are generally conceded to be by far the best cutters made, not in one point, but all points. To begin with, the gauges can be set instantly, effecting a very material saving in time. They are locked automatically, there being no screws to change.

AMERICAN TYPE FOUNDERS CO.

Sane Talks

THE FIRST OF A SERIES OF BRIEF TALKS
OF INTEREST TO THE LIVE ADVERTISER

HAS it ever occurred to you what good type style has to do with advertising? One of the best known advertisers in America has paid as high as fifty dollars for setting up a single advertisement, standard magazine page size. This man knows there is value in correct typography. Many years of analytical experience and careful tabulation of results have shown him that the selling power of an advertisement can be doubled by clean typography. A staff of high-priced competent workmen is most important. For years we have made a specialty of neat graphic typography

STEIN & KENT
89 John Street, Cleveland

We were awarded First Prize of Eight Hundred Dollars for excellence of Typographical Display in the recent advertising booklet contest open to the world, conducted by the Smyth Advertising Company. This booklet is devoted to the discussion of the cost of printing, matters pertaining to the successful management of an advertising campaign and to the showing of samples of fine paper in practical use. Send today for the beautiful booklet and you will be amply repaid

HINDIMEN TOY COMPANY

Mechanical Toys

The name of HINDIMEN is acknowledged throughout the world of toy manufacturing as the symbol of perfection. The wide range of variety in the different types of modern toys designed and made by this company is indeed the greatest in the world. The retail dealer with practical business insight will promptly recognize and appreciate the rare profit-making qualities of our goods. There is the specially designed toy for every age of the boy or girl, ranging from infancy to the teens. The mechanical toys turned out by this company have secured first prizes in ten different exhibitions of the National Mechanical Fair. This record is unequalled

AUTO EXHIBITION

THE WILDER TWO CYLINDER

Auto Chat

ABOUT WHAT IS WHAT AND WHY

THE POLICY OF THE WILDER CAR COMPANY IS HONESTY IN CONSTRUCTION AND TO MAKE THE BEST CAR THAT CAN BE PUT ON THE MARKET CONSISTENT WITH FAIR PROFIT

THE WILDER has made an enviable reputation for itself in the racing world. Invariably has it outdistanced all cars of equal price; has made better time and come through in better condition. Whenever it has been defeated in a speed contest it has been by cars costing hundreds of dollars more. In every contest held the Wilder has shown itself possessed of extraordinary motive power, great speed and endurance, cost considered. It has the high quality of construction, simplicity and strength of design that wins. In hill climbs its record has been just as brilliant; it has never been defeated; it stands triumphant. Victory in speed contests means more than mere winning a prize; it proves endurance; it proves quality. The Wilder wins because it is right in design and right in construction. Its motor is extra powerful; every detail of the construction is in harmony with its motor. The brakes, the wheels, the frame, the axles, the bearings, are all built with a surplus efficiency. Lubricating system is correspondingly efficient

SANE REASONS FOR OUR BIG SUCCESS

THE WILDER PLANT IS NOVEL AND STRICTLY UP-TO-DATE. IT HAS EVERY ADVANTAGE BEGOTTEN FROM PROPER PLANNING, LIGHTING VENTILATION, LOCATION. "QUALITY PLUS VALUE" IS OUR MOTTO

Westmont vs. Moxham

THE CENTRAL PENNSYLVANIA AND MARYLAND INTER-STATE LEAGUE

The Old Highlanders of Westmont will pit their skill and strength against the Moxham Indians of Moxham on the Luna Park Base Ball Grounds next Saturday afternoon at three o'clock. Wolf Jordon the celebrated Indian pitcher has signed up for the season with the Moxham Boys and will pitch his first game. Young Jordon is said to be quite a twirler. All local fans are expected to be there and hurrah for their many favorites

DESIGN
AND TYPE STYLES

New and Original Ideas In Type Design will give Printed Matter Distinct Character, Securing the Much Desired Emphasis

NEVER before in the history of the craft have the printers of the world had such a complete and attractive array of beautiful Type Faces and Advertising Accessories to use in producing good printing. In both fashion and finish the American Type Faces are recognized leaders. Style in type design has become a great factor in modern display and in advertising publicity. It has been the work of the American Type Founders Company to meet this demand for pleasing novelty and originality in types. How well we have succeeded may be determined by turning to the many new and forceful type faces displayed in this book. The progressive printers will buy liberally

Are You Protected

The subject of insurance is one that most people think they are thoroughly familiar with, but we venture to state that only the thousands of widows and orphans who have been helped by a policy realize the actual benefit which is derived from insurance. A ten year endowment policy will protect your wife and family and beside lay up a nice little sum to fall back upon when old age, with all its vicissitudes, shall come to you

FOUR YARDS OF CLOTH THAT ARE NOT UP TO THE STANDARD MAY be forgiven the merchant if all the rest are good. The letter-head that is not properly set offends tomorrow the same as it did today; it is bound to irritate the artistic eye as long as the supply lasts or until it gets upon the nerves of the man it represents so much that he discards it forever

BIOGRAPHIES OF ELEVEN PROMINENT JURISTS

FTER all our doubts and our suspicions and speculations on the subject of government we must return to an important truth, that when we have formed a constitution upon sound and free principles, when we have given a proper balance to the many lines of administration, fixed the representation upon pure and equal principles, we may with safety furnish it with all the powers necessary to answer in the most ample manner the purposes of government. The great desiderata are a free representation and mutual checks. When these are obtained all our apprehensions of the extent of powers are unjust and imaginary. One branch of the legislature is to be elected by the people, by the same people who choose state representatives. Its members are to hold their office two years and then return to their constituents. Here the w they act by their representatives. You s constituted by your state legislatures, b place the highest confidence, and formi branch. Then again you have an execu by the form of an election which merits of this government and in the mode of i

IT WAS A FALLACY IN YEARS GONE BY AND THE MISTAKEN IDEA IS STILL PREVALENT THAT ANY man can learn his trade in three or four years. At the end of that time he is supposed to be a compositor able to earn the full scale of wages. That should not be the end of his ambitions. He should keep abreast of the times, keep on studying, become efficient. The first effect noticeable will be that he will be retained while others are laid off at dull times; next perhaps a substantial increase in salary. Following this may be advancement to assistant foreman, or foreman, or a superintendency, or maybe a better paying position

INDIVIDUALITY IS CHARACTERISTIC OF LIFE NO BUSINESS AMOUNTS TO VERY MUCH WHICH DOES not show some distinguishing trait that divides it from all others of its kind. There may be similarity in both stock and methods; there is also a difference, else it is a dead enterprise. Perhaps no other business acquires its special brand of character as quickly as the printing business. Printers come in contact with the most alert business men in all walks of life, men who are used to sizing up others with keen discretion. Then, the printer's work is constructive; it reflects his character or else it is not his work. The product of the presses is also compelled to run the gauntlet of very careful scrutiny, because it permanently affects the standing of each patron. A reputation once established is not so easily gotten rid of. To change the known and ancient policy makes enemies $1234567890 of many customers

THE CORRECT USE OF HARMONIOUS COLORS

OLOR in design carries with it the responsibility of using not only the right color but the proper amount. As many neat designs are spoiled by prodigality of warm tints as are made offensive by inharmonious combinations. This being so, it is a pleasure to call attention to the refined color treatment that is displayed in a catalog printed for the Stearns Company by Samuel Brown of Blakeland, Ohio. This is a handsome book, the cover and inside of which were printed in two colors from type furnished by American Type Founders Company. The initial offers a new suggestion that is adaptable in many ways, consisting as it does of a half-tone with a colored initial set in. The headpiece is notable for the restraint exercised in the use of color. The dainty tint effect gives a warmth to the entire catalog
the color on the attention. Five initials
, but merely with sufficient prominence

SCIENTIFIC MANAGEMENT

THE greatest economic problems of the present day can be solved by scientific management. In every factory and shop where the output is more or less dependent on human activity and influence, the real value of management can be at once appreciated. This subject has been fully covered in Ransom Sprockett McBride's great masterpiece of business literature, "The Factories." Every phase of this subject has been fully developed by an expert factory man and business promoter. In addition to work-room economics the volume contains several very interesting and valuable chapters on commercial law and legal information concerning the labor

Skilled Men

ARE IN DEMAND AND HAVE NO TROUBLE IN SECURING GOOD-PAYING POSITIONS IN ANY SECTION OF THE UNITED STATES

Our courses in mechanics have been the means of paving the way for many poorly-paid men, both old and young, to secure good positions in all parts of the country. If you are not satisfied with your position, and have no objection to spending a few nights each week studying our course, we can help you to double your salary. It makes no difference whether or not you have had any previous experience in the studies you desire to take up, our lessons are so easy to understand, and at the same time so instructive, that it is really a pleasure to study them. Now is the time to start

WHY seek other climes and endure the many great disadvantages of foreign languages and conditions that you must necessarily come in contact with, when you can enjoy all the pleasures that are found in life, and the most entrancing scenery that nature has bestowed, at the Beton House? Being located amid health-giving pine-clad hills and close to the river and lake it affords all the advantages that one seeking rest and recreation could ask for, and at low rates

BORDERS

MANY new and original ideas in combination borders appear for the first time in this book. They constitute a distinct and unique innovation in border designs. The various characters are so designed that they may be used in combination or individually as the compositor's best judgment may dictate. For department store advertising and newspaper publicity they should prove most valuable and attractive. The Celebration Border used on this page will surely afford opportunity for the most tasteful and artistic display. These new borders have a wide range of usefulness and may be used to embellish printing of a most varied character. In appropriateness and in elegance of design they are unsurpassed

These new and original border designs are cast in type molds accurately to the point system

POET KINGS

A SELECTED LIBRARY OF POETRY

IN ORDER to meet the long felt desire for a complete collection of high-class poetry at medium price, the publishers undertook the great task and now offer to the reading public the result. "Poet Kings" is issued in separate volume form, each of which contains the complete works of one or more great poets, translated into English. Nearly every known country, from classic to modern, tells us, through the medium of one of her most gifted sons, of the pleasures and woes that surrounded the lives of its people. Therefore has this edition not only educative value, but has immense historic worth as well. It will prove a mine of art and wisdom to students, and a revelation to all the lovers of thought in rhyme forms. Nine volumes, leather bound, gilt stamped letters. Sold either separate or collectively. Leading dealers act as our representatives

Price for the entire edition, postpaid, $25.00
Single volumes, $3.00 each, postage 14c extra

NUMEROUS PRACTICAL HINTS ON SECURING AND MAINTAINING TRADE IN MEXICO
Getting trade in Mexico has been made the subject of considerable comment on the part of travellers and foreign concerns, especially Americans. Many valuable hints are offered as to the best manner to secure a customer, generally referring to the possession of the Spanish language and other important qualifications, but reference is seldom made to agreements, the very foundation of the business transaction which serves as a basis $1234567890 for future commercial relations

A Story of the Pluck and Perseverance of John Dawnson in His Great Search Through Russia

This new book is one that will please the most casual reader. One scene in particular that will not be forgotten is the description in the chapter relating to the poor, patient, betrayed Jane, who is on her way to the church in a very penitent mood, and is followed by the womenfolk of the village who abuse her with every vile insult that they can think of. The end of this romance depicts the taking of Jane's persecuted child to be a helper on the boat of his long lost father and the reconciliation The great search of John Dawnson is finally rewarded when he personally locates his foster-sisters and matters are then very successfully readjusted

BOOK BARGAINS

We beg to announce that we have just placed a large number of miscellaneous books on our bargain counter. These fine books are very slightly shopworn, just enough to prevent them from being classed as new. Some of the best-known authors are represented in the accompanying list. We have a few complete sets.

THE BINDINGS ARE ALL OF THE BEST QUALITY AND ARE FULLY GUARANTEED IN EVERY WAY

To make these books move quickly we have marked the prices at about one-half the publisher's regular rate.

Among the lot are four sets of Dickens' works previously sold at $40; each to be sold at **$24**

VOLTAIRE
ADDISON
MARK TWAIN
BROWNING
DE FOE
BUNYAN
PAINE
CHAUCER
DICKENS
LONGFELLOW
ELIOT
HUGO
AND MANY OTHERS EQUALLY WELL KNOWN

THE HERITAGE OF THE WESTERN PLAINS

By VIOLA HELENA GRAYHURST

We have also secured the complete second edition of this famous novel and are selling them at a low figure. "An appealing love story, pure as the far water brooks," says one well known reviewer, in the latest issue of the Scribe, of this new and fine novel

NEW BRUNS

GOVERNOR BURNS RESIGNS MONDAY

NOTIFIES LEGISLATURE THAT HE MUST SEEK NEW CLIMATE TO BENEFIT HEALTH

BY ADVICE OF NEW MINBURN SPECIALIST HE WILL LEAVE FOR PHOENIX MONDAY ON THE SOUTHERN PACIFIC

BANNERTON, August 27.—Governor Thomas Holcomb Burns sent a special message to the Legislature this afternoon making known his intention to relinquish the Governorship on Monday next. The reason given is ill health. Dr. Maurice Stanwix, the noted specialist on stomach troubles recently informed the family of the Governor that his only hope for ultimate recovery was to get entirely away from the duties and cares of public office and breathe

BOHNVILLE POLITICAL SITUATION MADE MORE UNCERTAIN BY DEATH OF BRADY

The death of Senator Brady has added to the uncertainty of the political mixup in the Fourteenth District. Chairman Foster of the State Committee literally threw up his hands in despair yesterday and left for his home in Monroe. Mr. Foster declared before leaving that it seemed that almost every man in the district had gone office mad and insisted on being nominated for some elective position. There are fourteen well developed boomlets for the vacancy caused by Senator Brady's death, and no possible compromise is in sight.

PARENTS OF MINERVA HURSTING OFFER REWARD FOR RETURN OF THEIR CHILD

The search for Minerva Hursting, the eight year old daughter of the millionaire printer, has been further stimulated by an additional offer of $5,000 for the return of the child by

CONVENTION DEMANDS MODERN COST SYSTEM

PRINTERS SEEK TO FIND SCIENTIFIC SYSTEM OF ESTIMATING

SPECIAL COMMITTEE APPOINTED TO FIND FIXED EXPENSES OF PRINTING PLANT

If the temper of the Master Printers' Convention, now being held in the ballroom of the Algonquin, reflects the attitude of employing printers in general, we may soon see the old cut-price system done away with and a new printing had not yet begun its influence as a business. Printing is a business upon which all other businesses must lean to a greater or less extent. Therefore, dignify it by doing your best work, and by demanding a fair and legitimate return for your work.

"Every printer should have a sample room, where his work can be displayed to advantage. Most printers' samples consist of a bunch of odds and ends that mean nothing. Printers should take as much care in displaying their samples as shoe men, hardware men or other trades do. Be sure to have a sample room."

The next convention will be held at Holton on Thursday, August 25, 1913. It is hoped that a larger number of printers will be present.

PASSENGER AIRSHIP OF RICHMOND LINE BUMPS INTO A DERELICT OVER DOSWELL

WASHINGTON, August 27.—The 8:14 airship from Richmond entered the slip at the Georgetown terminal tonight fifteen minutes late. Aviator Richards reports having run into a ten-cylinder derelict while passing over Dos-

BEAUTY CONTEST POPULAR

FOUR NEW CONTESTANTS JOIN RACE TODAY

MISS FRANCES CINDERS LEADS BY 15,000 VOTES THIS MORNING MISS GRACE PRICE A CLOSE SECOND

The contest editor has great reason to rejoice this morning. On page five of this paper you will find yesterday's big vote in detail. The excellent showing made by a young lady from the Third Ward shows what loyalty and hustle on the part of schoolmates and friends will do. To Miss Cinders go the laurels today. Her friends and admirers certainly gave her a handsome vote. They will have to hustle if they keep her in the lead, for the nurses in the Garland Hospital are going to give that beautiful diamond ring to Miss Price if they can. The number of contestants was increased by four in yesterday's returns. The friends of Miss Bertha Lacey, Miss Lucy Baker, Miss Edith Hamson and Miss Alma Miller placed them among the contestants with a good vote. The people of Bisen must award the $500 diamond ring offered by the Herald to the most beautiful girl in the city, before July 19. Only six more weeks left. Coupons will appear on this page with each issue.

Select your favorite and vote early and often. Extra papers may be obtained at the Herald circulation department. Send them to friends residing in other places.

Watch for the big surprise that is sure to come some day this week. While the votes have been coming in large numbers we have reason to believe that someone is holding back many more. Saturday's big edition will contain pictures of the leaders.

POLICE HUNTING CLEVER TOURIST

PALMS HIMSELF OFF AS A GRAND ARMY MAN LOOKING FOR LOST SONS SLEEPS IN LIMBO

An East End lady who conducts a large boarding house came to the police headquarters very early yesterday morning to report the disappearance of a new boarder who overlooked his board bill when he left. Chief McGrawly next received a call from a prominent Grand Army man from the Third Ward. He had been buncoed to the tune of $5, via the bogus check system and sympathy racket. From the descriptions given, the chief is certain that the man wanted is the "Gentleman Tramp" who spent a night in the city lock-up last Monday night, and told the chief he was looking for his two sons who were on the

Booklet Ornament Text Set in Century Oldstyle

been annoyed, and he was willing to withdraw the book out of deference to his colleagues in the conference.

Professor Ezra H. Tripp, of Dean Theological Seminary, presented the report of the West End Conference Commission on "Increased Pastoral Support," in which he said that the minimum salary of the average pastor should not be less than $800 per annum. The report was approved.

MAGISTRATE'S FORTUNE TOLD

PARRAKEET AND MOUSE PROMISE HIM SUCCESS AND LONG LIFE

Magistrate Hosen had his fortune told in Harrison Market Court yesterday, by a green and pink parrakeet and a black mouse. The bird picked out one of a tray of envelopes, which contained a message that promised luck and profit and a life of seventy-five years.

The mouse did better. It picked up an envelope with the statement that the court would be successful and live to be eighty-

PIANOS

OF RARE TONE AND GREAT BEAUTY

¶ Hundreds of our pianos have been sold throughout the country in the past ten years and we have yet to hear of one dissatisfied purchaser. Every one of our pianos have that rare, sweet tone which is only found in pianos of the better grade. Come and hear them as they smile, sob, laugh or whisper tender words of love. They are as responsive to the human touch as only wonderfully-toned pianos can be. We like to have you come in frequently. No one will ask you to buy, for selecting a piano is a serious matter and requires time and discretion. No family need be without an H. & M. piano as our terms are so flexible that we can make them fit almost every emergency.

Martindale, Bradson & Company

Number 1934 East One Hundred and Sixteenth Street

NEW BEDFORD, VERMONT

EXTEND to their friends and customers a cordial invitation to attend their Annual Exhibition and pass judgment on the recent importation of Oriental Carpets, Rugs and Tapestries which their special European agent, Mr. Herbert Mason, after visiting the principal marts and trade-centers of Europe, Asia and India, has selected for them. This selection is undoubtedly the finest that has ever been displayed and offered for sale in this city. No matter how keen the eye may be for color harmony, or how fastidious the taste in harmonious interior decoration, the subtle charm embodied in the making of these creations cannot fail to appeal to you. To have a beautiful and comfortable home is the ambition of every person of intelligence, and how to make the home as beautiful as one's purse will permit is an art in which every householder should be interested and to further this end a special staff of skilled housefurnishers and decorators is at your service

EXHIBITION OF RARE CURIOS
AND
FINE ANTIQUES

BEGINNING MONDAY, JANUARY 17TH, AND CONTINUING THE ENTIRE WEEK, OUR ANNUAL EXHIBITION OF RARE CURIOS AND FINE ANTIQUES WILL BE HELD IN THE WAREROOMS OF OUR NEW BUILDING. WE CAN TRUTHFULLY ANNOUNCE, WITHOUT FEAR OF CONTRADICTION, THAT OUR DISPLAY THIS YEAR WILL BE THE **BEST EVER SEEN IN THE CITY.** A SPECIAL EFFORT HAS BEEN MADE BY OUR TRAVELING PURCHASER TO OUTDO HIMSELF ON THIS OCCASION, AND THAT HE HAS SUCCEEDED TO AN ADMIRABLE DEGREE WILL BE AT ONCE APPARENT TO THE MOST FASTIDIOUS OF ART CONNOISSEURS AND COLLECTORS OF CURIOS AND ANTIQUES

A BEAUTIFULLY PRINTED CATALOGUE HAS BEEN ARRANGED AND THE ARTICLES ENUMERATED, **WITH A BRIEF HISTORY OF EACH.** PATRONS WHO FEEL INTERESTED AND FIND IT INCONVENIENT TO ATTEND THE EXHIBITION IN PERSON MAY SECURE A COPY BY SENDING THEIR ADDRESS TO THIS DEPARTMENT

IN ORGANIZING THE MERIM NORTHEASTERN BUILDING AND LOAN IT HAS BEEN THE PURPOSE OF ITS OFFICERS AND MEMBERS TO FURNISH A SOURCE OF **STRONG FINANCIAL AID TO THE HOUSEHOLDERS AND BUSINESS MEN** OF THIS RAPIDLY GROWING SECTION OF HAMLIN. ITS BOARD OF DIRECTORS IS COMPOSED OF MEN WHOSE REPUTATION FOR ACTIVITY AND HONESTY IN THE PROFESSIONAL AND BUSINESS WORLD HAS BEEN WELL ESTABLISHED. THOROUGHLY INFORMED ON ALL LOCAL CONDITIONS IT WILL BE THE EFFORT OF THIS BOARD TO FURNISH EVERY CONSERVATIVE AND PRUDENT AID TO THE DEVELOPMENT OF HOMES FOR THOSE STOCKHOLDERS WHOSE AMBITION LIES IN THAT DIRECTION AND TO LEND AID TO ALL THOSE WHO DESIRE TO ENGAGE IN LEGITIMATE BUSINESS ENTERPRISES. STOCKHOLDERS REQUIRING **LOAN ACCOMMODATIONS** MAY ALWAYS FEEL PERFECTLY FREE TO PRESENT THEIR NEEDS, WITH THE ASSURANCE THAT THEY WILL BE GRANTED COURTEOUS ATTENTION; WHEN THESE REQUESTS ARE BASED ON GOOD SOUND BUSINESS PRINCIPLES, CUSTOMERS MAY EXPECT LIBERAL CONSIDERATION SO FAR AS POSSIBLE, WITHIN THE LIMITS OF CONSERVATIVE BANKING. OUR RESOURCES WILL BE DEVOTED TO THE ABOVE MENTIONED METHOD OF AIDING AND BENEFITING STOCKHOLDERS A SPECIAL EFFORT HAS BEEN MADE TO MEET THE REQUIREMENTS OF LADIES BY THE INSTALLATION OF A **CONVENIENT AND AGREEABLE CONSULTATION AND WRITING ROOM** WHICH HAS BEEN THOROUGHLY FITTED FOR THEIR EXCLUSIVE USE

18 Point No. 1 — 16 A $2 00

DEMAND MAY BE CREATED BY EXAMPLE QUITE OFTEN GET OUT NICE LITERATURE

12 Point No. 4 — 19 A $1 50

THE CHARACTERISTIC DIGNITY SO MANIFEST IN THIS TYPE MAKES IT ESPECIALLY $1234567890 LIKABLE

12 Point No. 3 — 22 A $1 50

GREAT TYPOGRAPHICAL EXCELLENCE IS OFTEN A MATTER OF SENSIBLE REGARD FOR THE FINER ETHICAL REQUIREMENTS

12 Point No. 2 — 27 A $1 50

PERHAPS YOU WORK TOO HARD WITH HANDS AND FEET WHILE YOUR SKULL MUSCLE IS TAKING IT EASY, WAKE UP

12 Point No. 1 — 33 A $1 50

PUZZLING QUESTION CONFRONTS THE BOSS HANDS ARE ALL WORKING AT UTMOST SPEED YET WHY IS IT THAT RESULTS ARE MEAGRE

6 Point No. 4 — 30 A $1 00

IT IS NOT UNCOMMON TO SEE COMPOSITORS BUSILY ENGAGED IN PULLING SORTS AND IN PUTTING THEM BACK AGAIN OR IN TAKING LONG JAUNTS IN PURSUIT OF MATERIAL WHICH $1234567890 SHOULD BE HANDY

6 Point No. 3 — 34 A $1 00

BLAIR CONDENSED HAS ITS PURPOSE AND USEFULNESS AND THAT SIMPLICITY SO NECESSARY TO DIGNIFIED PRINTING FACES THAT COMPOSITORS ALSO ADMIRE ARE NOT LIKELY TO REMAIN LONG IDLE IN THE CASE AND TYPE THAT WEARS OUT IN USEFULNESS IS THE KIND TO BUY BECAUSE PROFITABLE

6 Point No. 2 — 40 A $1 00

THE BUSINESS MEN OF THE UNITED STATES ARE BETTER EDUCATED ON PRINTING AND TYPE THAN ARE THOSE OF ANY OTHER COUNTRY IN THE WORLD. THE PRINTING PRESS IN THIS COUNTRY IS RAPIDLY EDUCATING EVERYONE TO DEMAND BETTER PRINTING. PRESENT AND FUTURE CALL FOR TYPOGRAPHY THAT IS SIMPLE, WELL PRINTED AND EASY TO READ

6 Point No. 1 — 48 A $1 00

MODERN PRINTING IS GETTING AWAY FROM ECCENTRICITY, TYPE SHOULD NOT BE SET IN ECCENTRIC DESIGNS NOR SHOULD IT BE CROWDED WITH OVER-ORNAMENTATION, IT MUST BE EASY TO READ AND YET IT MUST BE DISTINCTIVE. THE EASIEST WAY TO GET THIS DISTINCTIVENESS IS WITH NEW TYPE FACES, AND THE PRINTER HAVING THE MOST NEW FACES CAN CREATE THE MOST NEW BUSINESS. CUSTOMERS WELCOME NEW FACES

REAL ESTATE AND MANAGEMENT OF PROPERTIES

MADISON AND BERGINDALE ROADS, RICHMOND

THE VALUE OF REAL PROPERTY AS AN INVESTMENT DEPENDS UPON ITS PROPER MANAGEMENT. IT OFTEN HAPPENS THAT A PROPERTY OWNER IS SO SITUATED THAT HE HAS NEITHER TIME NOR OPPORTUNITY TO GIVE HIS LAND AND BUILDINGS ANY PERSONAL SUPERVISION, BUT MUST OF NECESSITY DELEGATE THIS TRUST TO ANOTHER. IN ORDER TO MEET THIS NECESSITY AND TO PROVIDE A RESPONSIBLE AGENCY FOR RICHMOND PROPERTY OWNERS, THIS COMPANY HAS ORGANIZED ITS REAL ESTATE DEPARTMENT. THE PROPER MANAGEMENT OF INCOME BEARING REAL ESTATE CONSISTS CHIEFLY IN THE CAREFUL OBSERVANCE OF ALL THE IMPO CKEN

In every instance full cases of type are most economical to printers as there is no waiting for sorts and no necessity for pulling letters from again, there is great satisfaction to know that you can depend on having enough type to set the job, which also insures better work. The use of a distinctive face of type for a booklet or circular is sure to add to its effectiveness; and this big advantage now involves no additional expense for type

American Line Type Faces

PUBLICITY is the vital spark that keeps alive the public interest in a business enterprise, and the professional man or merchant who neglects to heed this fact is in danger of finding himself lost in a fog of dangerous oblivion. It has become worth while, very necessary, in fact, for printers and advertisers to study designs of type and educate their community up to a realization of the great advantages to be gained from advertising. The new and stylish Type Faces designed and also manufactured by this Company, and so consistently assembled in a related family, have proved of great potency in stimulating the demand for better printing in both the commercial and advertising fields. A casual examination will demonstrate the great worth of American Line Type Faces

CONTRACT FOR BUILDING WARSHIPS

CONNECTICUT BUILDERS MAKE BUSINESS TRIP ABROAD TO COMPLETE DETAILS FOR ENORMOUS NAVAL ARMAMENT

WASHINGTON, Sept. 23—George A. Sims and Silas Young will sail for Russia within the next few weeks, where they hope to close negotiations with the Russian Ministry for the construction of seven battleships and their accessories, and with other naval armament, at a cost of $100,000,000.

Mr. Sims admitted yesterday that Mr. Young and himself would leave for St. Petersburg to discuss and probably conclude negotiations with the Russian government. These negotiations have been in progress several weeks. It was stated, however, that the propositions which Mr. Sims made on behalf of the Martinburgh Steel Company have not been closed. It was known among the large shipbuilders of the world that Russia proposes to begin immediately the reconstruction of her navy and tentative propositions have been given by several English and German concerns.

WHAT CONSTITUTES A SUBSCRIBER

AN INTERESTING COURT DECISION RENDERED IN THE STATE OF MASSACHUSETTS

A court decision has lately been rendered in Massachusetts on what constitutes a subscriber. The judge held that the man who received the paper, although he never subscribed, must pay for it. It appears that James Thompson moved, and William

ANNOUNCEMENT

To Those About to Entertain

"Such and so various are the tastes of women"

IN the usual interchange of hospitality and merrymaking in polite society the success of social gatherings is greatly added to by appropriately printed invitations, programs, menu cards, place cards, or anything of that kind. From my shop I can furnish you with artistically printed things and for special entertainments I can furnish printing that will harmonize with the general color scheme and decoration

JEWELLER SHOT DOWN

S CURTISS SLAIN IN SIGHT OF MANY IN UPTOWN STREET

ASSASSIN RESENTING ALLEGED INSULT

eweller, with a place t Twenty-third street y, was shot down and yesterday afternoon nth street near Sixth ailant, a negro, gave George Davis and de- lice that the jeweller n had insulted him. mployed in an auction 75 West Twenty-first street, was sent on an errand shortly before 3 o'clock. He returned with his purchases and then got a revolver. He left the store, walking in the direction of Sixth avenue.

Less than one hundred feet from the store was Curtiss and a man who gave his name as Frank Hagerty and said he lived at No. 1391 Seventh avenue. The men were walking in the same direction as the negro. On the opposite side of

BIGGEST MEXICAN BATTLE DOUGLAS AGAIN UNDER FIRE

DESPERATE INSURRECTOS REPULSE FIERCE ATTACK CAPTURE FEDERALS' MACHINE GUNS

More than half of Douglas was under fire to-day by Mexican Federal troops, who made no attempt to obey the warning of the citizens that the lives of this lovely city's residents must not be endangered in fights on the border with Mexican insurrectos. Six men and one woman in Douglas were injured. Shots fell a mile from the international line. Eleven hundred Mexican Federals, with

Strength of Printing

Concerning Effective Display

Obtained through the use of the Alternate Gothics

In this rush and roar of our twentieth century commercialism it is essential that display in advertising has strength and character that recognition may be obtained. The strong and virile characters of the dignified and versatile Alternate Gothics will enable every printer to produce advertising with stronger display and tone that will demand attention anywhere. If you desire strength and character in your product add this useful gothic family to your composing room. It will enable you to give just the right display in the right place. They have been properly called the gothic family par excellence. They have the style and finish to be seen in all of the beautiful and versatile type faces which are continually being originated by this Company. Emphasis is the thing desired in publicity of any kind and is obtained only through original faces and strong display

In Strength of Character and Beauty of Line These Excel

American Type Founders Company

ARROW DAY

EACH WEEK DAY DURING MONTH OF MARCH

Here you may choose from stocks, on display or accessible for selling, far greater than the combined stocks of ALL the other department stores in the city, at prices readily appreciated by people thoroughly familiar with market conditions in this country. Our motto is: Everything for Everybody

MERBINE BEACH

THE FINEST SUMMER RESORT

SITUATED WHERE THE OCEAN AND MOUNTAINS MEET

MERBINE IS NOTED FOR ITS PICTURESQUE AND ROMANTIC SCENERY. THE GLORIOUS AIR, THE MAGNIFICENT VIEWS AND COMFORTABLE ACCOMMODATIONS ARE GREAT ATTRACTIONS IN THIS GREAT MOUNTAIN AND SHORE REGION, WHICH IS A PARADISE FOR CHILDREN AND A WONDERFUL SANITARIUM FOR EVERYBODY. THE BEACH IS ONE OF THE FINEST IN THE COUNTRY AND AFFORDS EXHILARATING BATHING. THE CLOSE PROXIMITY OF THE GREAT SILVER MOUNTAINS OFFERS THE VACATIONIST THE CHOICE OF RECREATION AT THE SHORE OR AMONG THE HIGHLANDS OF THE ADJOINING MOUNTAINS WHICH ARE SWEPT BY OCEAN BREEZES. AMONG THE MANY DIVERSIONS ARE GOLF, TENNIS, BOATING, FISHING, DRIVING AND MOUNTAIN PATHWAYS THAT TEMPT THE TRAMPER, AND OPPORTUNITIES FOR EXCURSIONS TO MOUNT CHRISTOPHER

THE NORTH STAR RAILWAY, IN CONNECTION WITH THE MOUNTAIN & SHORE RAILROAD, FORMS AN ALL-RAIL THROUGH CAR LINE BETWEEN NEW YORK AND ALL POINTS IN THIS FAMOUS SECTION. THE SUMMER TIME TABLE IS NOW IN EFFECT. AN ILLUSTRATED BOOKLET MAILED ON RECEIPT OF SIX CENTS

Hello Cut Art-tile Tint Formers

FINE SUMMER COTTAGE

Furniture

CHAIRS, TABLES, BEDSTEADS AND PARLOR SUITES

YOU must not get the impression that our stock is higher priced than others. But it is, however, very exclusive in design, and it is also true that we have the patronage of the most discriminating and particular people in all sections of the United States. Our cottage furniture is especially adapted for both shore or country houses where a simple, harmonious and artistic effect is desired, conforming with the surroundings and not sacrificing one particle of comfort.

THE REPUTATION OF OUR FURNITURE HAS BEEN BUILT ON ITS SIMPLE ARTISTIC LINES, SOLIDITY OF CONSTRUCTION, AND A VARIETY OF CUSTOM FINISHES

The Great Popularity of Brass and Copper Thin

SPACES

¶ Brass and Copper Thin Spaces make justification so easy that no printing office, large or small, can successfully attempt to do without them. These spaces are put up in special cases, made the size of the regular Wisconsin Quarter Cases, four of which just fit in a regular blank case. They can thus be kept where t accessible, or can be pla the stone. They are a ve and valuable article in th room, and will save a larg unnecessary amount of l will prove a valuable adju rections on the press. In quick and accurate justi boon to any printing offi busy composing room. That these Thin Spaces may be readily distinguished, the Half Point are made of Copper and the One Point are made of Brass. For prices and further information in regard to the Brass and Copper Thin Spaces write to nearest Selling House for pamphlet

NOVELTIES

For Making Your Home Attractive

To the man or woman of good taste the subject of making the home as beautiful and attractive as possible is always one of great interest. Our novelties are selected by experts in the art of home decorating, and always with the view of giving our patrons and the general public the best and most original ideas for their money. A visit to our show rooms, and a casual examination of our stock, will convince the most skeptical that our claims to art in the way of house decorations have been substantiated in every detail. We will have special displays

Hotel Marhend

THE NEWEST AND THE BEST HOTEL IN THE CITY OF SPRINGFIELD

The opening of this new house has given the people of this city one of the finest hotels in the country. The structure is fire-proof and modern in every way. It is, first of all, one of the few hotels that have a separate section for women, and it is a home hotel with family accommodations

FRANKLIN BRINKER, Manager

Twentieth Century Ornaments Inland Border No. 1258

NIMROD
MONTHLY JOURNAL

Volume 32 Number 2

Angling Number

SPECIALLY ILLUSTRATED BY JOHN ROBERT HAMERSIN

This issue is arranged exclusively for the coming spring and summer fishing season, and it contains many valuable hints and suggestions for the angler who intends to visit the different mountain lakes and streams among the haunts of the various game fish. The specially written articles on casting and on the many artificial and live baits that have proved to be so successful should be read very carefully by every angler so as to secure the correct tackle for the stream or lake that the angler may select

RANGES

THE LATEST AND MOST SERVICEABLE KIND

HUNDREDS of housewives who visit our store are astonished at the ease with which our new improved range can be adjusted to meet the demands of those who require a first-class cook-stove as well as a practical heater. This combination range is the most practical heater and cooker now on the market. It is fitted with attachments for both gas and electricity. We will be pleased to set up in your home an M. & D. Range at once and wait for the first payment on same until December 1, if you wish. We make this offer, anticipating rush of January orders. It will be worth your while to drop a postal for further details, or, better still, visit our store and see this wonderful combination range in practical service. By accepting our aforesaid offer you get immediate use of the range. We keep busy and avoid delays in later deliveries

RADE HOTEL

OPENING

Charles Rade, for many years manager of Hotel Niagara, has bought the old Kinderton House of Moxham and will open to the public next week under the above name. Friday night the friends and patrons are invited to the Tap Room Opening. So this bids ye come share a flagon and joke; in the tap room an evening to dwell, and loiter awhile by the fire and smoke, kind sirs, at the Rade Hotel. Come early

The Old Sol Watch

"ACCURATE AS THE ORB OF DAY"

The Philosopher has told us that Time is Life. A watch that just keeps "good time" is almost worthless to live men who make every second count. The "good time" watch is on a par with the inaccurate cash register or any faulty medium of measure.

To be punctual your time-piece must be exact, not "about." Come in and examine our guaranteed "Old Sol" Watches.

Our Ten Cent Collars

The life of your collars will be the same no matter how much you pay for them. Modern laundry methods have the same effect on all linens. Our ten cent collars have the wear and finish of the higher priced and more widely advertised article. We guarantee them to make as many trips to the laundry as any twenty-five cent article.

Seventeen Styles

Representing all the approved and fashionable shapes. We have them in quarter sizes which is another good feature not often found in the low price collar.

You will find anything you want in men's furnishings at our store.

☞ Boxhead Gothics, comprising the smaller sizes of the Copperplate Gothic Family and also the small sizes of the Lightline Series are cast on the smallest practical bodies, and intended to be used where the space is very limited. This series will be found particularly useful in tabular and index card work where a large number of words are often required in a limited space. The illustrations below give but a vague idea of the usefulness of Boxhead Gothics. Printers with up-to-date ideas will readily see the advantages of this up-to-the-minute series.

EXAMPLES SHOWING HOW SPACE MAY BE ECONOMIZED BY USING BOXHEAD GOTHICS

Announcement

According to our annual custom we again call the attention of our patrons to the spring display of special importations of beautiful foreign fabrics which are used in our distinctive tailoring for men of fashion. A glance in our store windows on Friday, September ninth, the opening day, will more than satisfy you that our stock of

English Suitings

comprises some of the richest as well as exclusive designs shown anywhere this season. You have never worn a suit or topcoat such as we make to your measure for thirty dollars. A combination of workmanship, style and service in these garments at this price is not to be duplicated by any tailor

O lovely voices of the sky, that hymned the Savior's birth,
Are ye not singing still on high, who once sang, "Peace on earth!"
Shall o'er us float those holy strains, wherewith, in days gone by,
Ye blessed the lonely Syrian swains, O voices of the sky!

The hope of the Printer for Better Prices will be Realized Gradually but Positively by the Public Becoming More Familiar With Faces

14 Point — 9 A $1 25 28a $1 75 $3 00

When anything in Art or Style gets established in Printing Shops there is sure to be a Reaction. Printing Buyers of today want Variety in their Work and the Up-to-Date Type Faces that are Attractive and Catch the Eyes of the Public

12 Point — 11 A $1 20 31a $1 55 $2 75

When a Printing Office gets into a rut in style and clings persistently to a limited few Faces of Type, no matter how good they may be, it is bound to lose trade $1234567890

8 Point — 14 A $1 00 41a $1 25 $2 25

When you find a Printer who is selling his Product as so much paper smeared with Ink, you have found One who has missed his real Vocation in Life. The Successful printer of the Future must sell Business-getting Potentiality. He will Educate his Customers to this idea

10 Point — 12 A $1 10 36a $1 40 $2 50

The effective and progressive Printers of the Country are Educating the Public to a better Appreciation of what Real Quality in Printing consists of. It is not the paper ink and binding, but it is Stylishness, the Expression of Fine Art. It is intellectual

6 Point — 16 A $0 90 47a $1 10 $2 00

The publisher who neglects the study of good Typographic Style is not onto his Job. He is advertising himself adversely, or, to be more explicit, he is Glaringly Advertising the Fact that his interest in the Advertiser ceases when the space contract is signed. Those who place the great Advertising contracts, and also those Intelligent Advertisers on a Lesser Scale are Illustrations $1234567890 Original Designs

Citizens Bank of Holland

Worchester Street and Lenox Avenue Holland, Maine

The wealth and frugality of a people may be best judged by the records of a progressive bank located in its midst. For this reason we take pride in reciting the growth of the Citizens Bank, reflecting credit as it does both to its careful management and the development of the community which it has served. Back in those days of General Grant's presidency, 9 years after the close

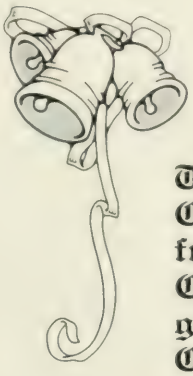
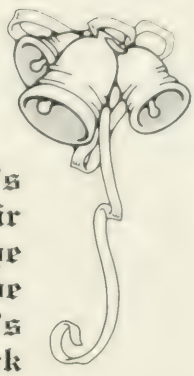
Christmas Day



St. Paul's Church



The Members of St. Paul's Church desire to invite their friends and neighbors to the Christmas Day service to be given in the new St. Paul's Church on Main Street Park and can assure all who come a most cordial welcome. The morning service will begin at ten thirty o'clock sharp, and the afternoon service opens at three o'clock. A selected choir of fifty voices will be on hand to render sacred carols

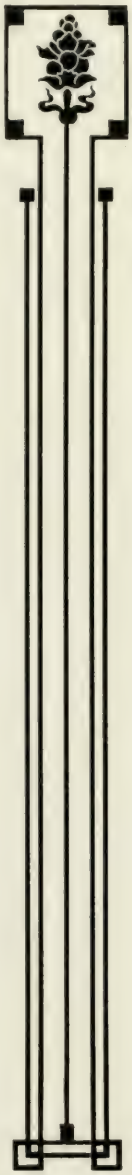
Pottery of the King Louis Pattern is conceded by all judges to be the most durable made and with ordinary use will last for years and years



King Louis Pottery

This ware is the product of hard fire. The aim is not only to produce beautiful form, decoration and color, but by the high temperature reached to give to the dead glaze a texture and the quality seldom found outside the ancient Chinese pots. Dull yellows, blues, browns, greens, grays, pinks and blacks, in many shades and varieties of effect, represent the widest range in color. Human and animal forms are used in the decoration. We believe it better to bring out a limited edition of a beautiful and carefully thought out design, varying in each piece the color and glaze effect, than to seek and execute hastily some new design for each piece. A catalogue, for which we are often asked, would be unsatisfactory, for each piece is taken up and the price made according to individual value. This description will also give an idea of what we are doing in tiles suitabl and interior decorations This pottery has been est and in operation for a ce has acquired the skill tha experience alone can giv Its ideal product has lon standard in art pottery a will so continue as long All our wares of previou considered treasures an of the aristocracy are ad Those fortunate enough t are loath to part with the they are kept in the famil Some wonderful specime in our general offices and have you call and inspect or write and we will sen with beautiful photograp

Announcement

IN DOING IMITATION TYPEWRITER PRINTING, THE FOLLOWING DIRECTIONS SHOULD BE STRICTLY ADHERED TO:

1. *Always* wash your type-ribbons with soap and water before using.
2. Have the press and all its parts *immaculately clean.*
3. Have new rollers for each color and use them for that color *only.*
4. A good fountain is *necessary.*
5. *Always* secure your shade before starting to run job, using typewriter color sheet.
6. Be careful to run job *evenly.*
7. *Do not* try to get match by mixing inks. Get special ribbons.
8. Train your stenographers as to correct touch. *Do not let them get careless.*

Set in Cheltenham Medium and Cheltenham Medium Italic

Typewriter Faces

For Silk and Plain Printing

Typewriter faces should be selected to match the work of the typewriting machines used in adding addresses, etc. Small typewriter faces are made to enable advertisers to reprint seeming reproductions in facsimile of real typewritten letters. The following collection of Typewriter faces is the best and by far the most complete manufactured.

American Type Founders Company

To the Printer of Judgment,
In Any Country.
Dear Sir:-

With the increased amount of attention that is being given to the subject of printing costs, comes the realization that while labor cost is not, by any means, the entire expense of doing work, it is still a most important item. At least one-third of each compositor's time is non-productive. This is a large percentage of waste time, a larger percentage than will be found in most manufacturing businesses. Of course, some of this unproductive time is legitimate and unavoidable--necessary because of the business. But to anyone who studies actual shop practice carefully it becomes evident that some, at least, of this unproductive time could be put to more actual use. Perhaps the most obvious cause of wasted time is the search, and often the futile search, for enough material and sorts to complete work in hand. Some of this time is charged into the time spent in doing the job and is paid for by the customer; much of it comes under the head of unproductive time, and helps to increase the expense of doing the work to the employer. However, it figures in the time checks and it lessens the productive capacity of the office. Nor is it always because of unwillingness on the part of the management to buy sufficient supplies.

Take an example: A job comes into an office well supplied, perhaps, with sufficient job type for any ordinary demand. The copy runs heavily on some particular face, or some special sort. Perhaps time is limited. The foreman may not see the wisdom of buying additional type for just one job. He may be too busy or hurried with other matters to give the problem careful consideration, or, in fact, much of any consideration. So the copy is handed out, and the plea that cases are empty is too often met with the order to pick for sorts, or to turn for letters. Now a man can easily spend two or three hours a day of the firm's time in the search for sorts and at the end of that time be unsuccessful. An eighteen-dollar man, for instance, whose time, taking all things into consideration, is worth a dollar an hour to his employer, may spend two or three dollars' worth of time in the futile search for sorts, when an ample supply could have been secured at the type foundry at slight cost. It would have been money saved to buy the type and throw it away at the completion of the job. Every printer should realize that labor cost is an item of expense beside which type bills are next to nothing.

To Mr. Hustling Printer,
Located Anywhere.

Dear Sir:

Imitation typewritten letters have found a permanent place in the industrial system of to-day. To a large extent this has been brought about through the facilities for such work offered by the American Type Founders Company. Not only does this Company furnish type cut accurately to match the characters used on various styles of typewriting machines, but it also furnishes the process inks and typewriter ribbons to match. Every printer with business instinct is prepared to take orders for this class of work. Many offices have found the production of imitation typewritten letters very profitable and have developed what has proved an almost independent business along this line.

This new face, 12 Point Silk Remington, is designed to be printed through silk, crepe chiffon or regular ribbon cloth. By varying the quality and amount of cloth used an impression of any weight and character may be obtained. The ribbon cloth is heaviest, and gives most weight to type face. Crepe chiffon is lightest.

If the addresses are to be filled in on a typewriter have the stenographer of the firm for whom the work is being done write a sample letter. Use this as a color sheet and have the pressman work to it, for the depth of the color and the weight of the impression may easily be controlled on the press, while it is impossible to do this on the typewriter.

You then have the assurance that the ink used in printing will exactly match the ribbon used on the typewriter for filling in the address. The result is sure to be satisfactory to the customer.

American Type Founders Company

Originator and Maker of All the Latest and Most Artistic Fashions in

Printing Type

Mr. Printer,
Typewriterdom.
Dear Sir:-

The work of the typewriters using large type is closely imitated by using our 12 Point New Model Remington Typewriter. There are hundreds of job presses running constantly on this typewriter work in the large cities. The rapid increase in the mail order business and use of follow-up systems has created an enormous demand for this work, and no hustling printer can afford to overlook this avenue for profit.

This is our New Model Remington printed through silk. All American Typewriter faces are made from dies furnished by the makers of typewriters and they duplicate typewritten work. If you wish to match the work of any typewriter not mentioned here, send us a sample and we can undoubtedly furnish the type you want.

As the productions of the American Type Founders Company are the admitted standard of excellence throughout the world, due regard for the reputation of its own productions will not permit it to recommend anything that is not the best procurable in its class.

In the line of type faces to enable the printer to handle orders for imitation typewritten letters, the American Type Founders Company is the acknowledged leader. In this American Book of Type Styles will be found specimens of type faces, which absolutely match the work of the leading makes of typewriting machines. A specialty has also been made of Reproducing Typewriter faces, to meet the constantly increasing demand for fac-simile letters in reduced size. Any printer can now successfully print "fac-simile" typewriter circulars in unlimited numbers, easily, quickly and with profit.

THE PRINTER OF THE FUTURE

Long ago some printers were possessed of a sentiment that their work should be performed with little desire for material advancement; that its nature was so closely related to the civilization of mankind, it perforce must be largely one of love and duty! And a number of the craft to-day seem to be enamored of this old idea. While it is a noble sentiment, the effect has been to retard rather than to develop the greatest of all agencies for the education of the people. If growth is to come in any business, the men engaged in it must be fitted for their work. Their reward should be sufficient to give time for study and research, for investigation and experiment. Just as poverty is the implacable enemy of the social up-lift, so is it the most formidable foe to business development. But, nowadays, with free libraries and the dissemination of well printed literature, poverty can not stand in the way of self-culture.

A study of the beautiful "print pictures" that can be made from a thorough acquaintance with the latest up-to-date American Type Faces and an intelligent use of their many delightfully pleasing combinations, will well repay any printer. The type books of the type founders are in themselves an education in the higher arts of printing.

Your customers can be induced to order a vastly increased amount of printing if you show them how they can increase their trade by having you furnish them with up-to-date styles in printing.

The experiment is worth your trial; it will pay you a big per cent. on your investment--many times the legal rate. Our interest is your interest, and your interest is our interest. If you order some of our latest type, borders and ornaments now you will get profitable results.

American Type Founders Company

THE EMPORIUM OF THE PRINTING INDUSTRY FOR

TYPE

Borders and Ornaments

To the Progressive Printer,
Everywhere.
Dear Sir:-

This new face of 10 Point Elite Oliver Typewriter is a close reproduction of the work done on the Oliver Machine, and will therefore commend itself to the printer who secures orders for imitation typewritten letters requiring this particular face.

There is a constantly increasing demand for the printing of imitation typewritten letters, and in all the leading cities wide-awake printers are taking advantage of the opportunity and are increasing their facilities for doing this work.

This face can be used in the production of imitation typewritten letters by the process of printing through silk. This work can best be done by printing through crepe chiffon stretched on the grippers, leaving the cloth a little slack, and using process inks. This method will give most satisfactory results when used on a platen press.

When on a cylinder press, use Japanese silk of good quality, but light in weight. Lock up the silk loosely in the form, between the type and the furniture; draw several impressions from double thicknesses of stock to be used on the job, forming a matrix of the cloth.

At all times have cloth washed thoroughly with soap and water before using. Use CLEAN rollers and bearers. Use typewriter ribbons that have been saturated with the same ink for filling in the names and addresses. We furnish the regular process inks and the typewriter ribbons to match for this work. In using these materials you have the assurance that the ink used in printing will match the ribbon used on the typewriter to fill in the addresses.

Distribute the process ink on the plate as usual, then put in form. The first few rollings will saturate the silk with ink and it will act as an inked ribbon, giving an impression like that of a typewriting machine. The silk will last a long time and when filled up can be washed in benzine and used again.

Ten Point Elite Oliver may be obtained from the nearest selling house of the American Type Founders Company. Printers are invited to study the merits and possibilities of this face--a most desirable size for the fac-simile letters needed by professional men, clubs, libraries, and similar sources of new customers.

American Type Founders Company

The World's Largest Furnisher of

Borders and Ornaments **TYPE** Brass Rule and Wood Goods

TO THE MASTER PRINTER,
In Every Country.

Dear Sir:-

Imitation typewritten letters are the most profitable specialty open to the Job Printer. They can be turned out as fast as any job press will run. Your customers need them, and if you can not do the work, will purchase elsewhere. You must have special ink and type adapted for this work, then a few cents for silk completes the outfit.

Our Process Inks and Typewriter Ribbons exactly match. We guarantee them. It is a waste of time to try and match a customer's ribbon. Print the job and send the ribbon with it.

Our ribbons and process inks are used by the largest concerns. Write us for complete instructions for this work.

Typewriting ink will not dry or harden, so the press needs no washing from day to day. The particular kind of cloth used is not important. The crepe chiffon, China or Japanese silk or regular ribbon cloth are used. The ribbon cloth is heaviest and gives most weight to the type face. Crepe chiffon is the lightest. China silk is usually used. The work is done on linen or hard finish paper. By varying the cloth from crepe chiffon through China silk up to the ribbon cloth, the operator can get any desired weight of face. In other words, our New Model type will print very light with chiffon, moderately light with China silk, and will give a heavy blurred impression with the ribbon cloth.

Any printer can now successfully print "fac-simile" typewriter circulars in unlimited numbers, easily and quickly--with profit.

American Type Founders Company

THE LARGEST AND MOST PROGRESSIVE

Type Maker and Printers' Outfitter

TO THE WIDE-AWAKE PRINTER,

Everywhere.

Dear Sir:-

Get on top of your business. Do not let it get on top of you. A great many of us are kept just busy enough not to have time to expand. Many of us do so much ourselves that we can not find time to do the more important things. Our business becomes a treadmill. We make a living by it, but there is little if any zest in conducting it. We are always "up against it" when we should be on top of it, expanding our business horizon.

Perhaps we are located in a small town, and when we came we filled a "long felt want." A certain part of the community needed our services. That was a good foundation. Are we building on it by cultivating wants that have not been felt? This is the aim of all advertising. To realize this fact, and act upon it, is an important step towards a larger success.

If you have no time to advertise your printing business, your business, as a rule, is on top of you, and you are not getting out of it all it holds in store for you. Therefore, take time to study your advertising problem. There is no need to plunge. Go at it gently. thoughtfully, but above all persistently. Perhaps it will be better to hire some one to help you. You did not disdain the help of a sign painter, who advertised you with the sign he painted better than you could paint it. Possibly you are a better printer than advertiser. If so hire a little of the time of an advertiser who is able to convince the business people in your community that they are neglecting profits by neglecting to use your printing facilities.

TO THE BOSS PRINTER.

The average status of the printer in America has improved wonderfully. None know this so well as those who manufacture for the printers. It is a business steadily rising in public estimation. Printing is more and more coming to be recognized as the greatest ally of commerce and manufacturers. Stop the printing presses for three months and business would stagnate. This knowledge of the selling power of printed advertising should be unceasingly propagated by the printers. Their motto for the public should always be: "There is nothing so valuable to stimulate trade as printing."

On the other hand, the printers require more and more to know themselves that that motto is true. Let each cultivate a high appreciation of the value of his product to his customers. The printer is not always selling paper smeared with ink. Most of the time he is selling the breath of life to his customer's business. Consider the big publications. We are told that they are sold to the reader at the cost of production, or less, and that the advertisers pay the profits. The publishers do not base their charges to the advertisers on the cost of printing and editing. They base their charges in a large degree on the value of the publicity and the returns the advertisers get from it. Wherever possible, the printer should use the same basis for estimating the value of his product.

It is not to be expected that all printers can rise to a position where they may secure what may be called a professional profit, as distinct from a mechanical profit, but many are doing it.

American Type Founders Company

THE WORLD'S LEADING AND MOST PROGRESSIVE DEALER IN

Printing Material

[illegible]. Ambitious Printers:

As we write, our ears are filled with a mighty pleasant sound. It is the rhythmic music of hundreds of type-casting machines making American types--many tons a day. What are they made for? It is a very pleasant reflection to know that every pound of them is made to enable printers to make money. From each dollar's worth of types many dollars of profit are earned. These types pay us one profit, but may pay their lucky purchaser thousands of profits. There is still another really pleasant reflection. Almost all the printing done with these types is immensely profitable to the printers' customers, extending their trade, widening their profits, and enlarging their business world.

Really, now, is there anything manufactured that is quite as wonderful as types? They bridge the space between mankind's thoughts and mankind's deeds. Those little metal things are the messengers of thought. They are, you know, the most important things in a printing office, at once the root and the fruit of the business.

Nevertheless, there are printers who are careless in the selection of their types, buying imitations of American Type instead of the real vitalizing thing itself. You should be studious and critical when you buy these wonder workers. We say this, selfishly perhaps, because the more you study and think about types, and the more critical you become, the more difficult it will be for you to get along without American Types--the best types.

As the productions of the American Type Founders Company are the admitted standard of excellence throughout the world, due regard for the reputation of its own productions will not permit it to recommend anything that is not the best procurable in its class.

AMERICAN TYPE FOUNDERS COMPANY

ORIGINATOR OF STYLISH

Type, Borders and Ornaments

TO THE PRINTING SPECIALISTS,
Found Everywhere.

Dear Sir:-

A youth once had an aged, affluent, wealthy uncle, who died and left said youth with several cart-loads of coin. Up to the time of the aged one's demise the youth had known naught of the family's wealth, nor, in fact, of any relatives closer than an uncle who periodically let him have the price of a meal, providing collateral was deposited.

Heretofore, the youth had wrung from the world the price of two or three meals a day and a place to sleep by various and sundry methods. In the summertime he was usually to be found outside a tinselled palace at a summer resort, explaining in raucous tones to the passing multitudes the wonders of the show inside, dilating vigorously upon the educational value of the exhibit and talking with persuasive power. One summer he took the role of actor; he was Cupid, strapped to a wheel of fortune in a show labeled "A Trip Through Purgatory."

At any rate he was usually at the same resort in some capacity.

The winter months found him, as a rule, selling baking powder, books or patent lamp wicks from door to door--house to house canvassing they call it.

And then the aged, affluent uncle died.

The youth had notions of the fitness of things. He felt that he must live up to the responsibilities thrust upon him. No gilded-youth business in his! The only course left open to him, as he saw things, was to go into business, some legitimate, dignified business that would harmonize with his bank account.

He looked about him and presently he said, "Ah!" just like that. He said, "Ah! I have it!"

He hired an office. It was a nice, perfectly good office, with a soft, springy rug on the floor and a set of dignified mission furniture scattered about. It had a door with a frosted glass window leading out into the hall of a great office building. A sign painter came and emblazoned the youth's name on the frosted glass, and underneath was inscribed, in letters of no modest proportions--ADVERTISING SPECIALIST.

The youth did not know the difference between a half-tone and an engraved calling card; to him Chaucer Text and Century Expanded looked alike; he had never written anything but an I O U or two; he knew that the blood was accused of circulation, but he couldn't imagine that the word had any application to publications; he was firmly convinced that all mediums were spiritualists.

He hired a stenographer and showed up regularly at the office. Once or twice some one did open the door and come in to see him. But two minutes and a half of conversation were sufficient to convince those with money to spend that it was no place for anyone but the youth and stenographer.

Now this is not a treatise on advertising, but the apparent lesson from this youth, who is still paying office rent, telephone charges, light bills, stationery bills (although these are not large), stenographer's salary and all such numerous incidental expenses, and all from the wealth of the late aged uncle, may be applied for the benefit of the printer-man.

Tacking up a sign on a doorway, or on the end of a desk, does not make a man a specialist.

A specialist, as we are told, is one who devotes himself to some specialty, and a specialty is "that for which a person is specially distinguished."

A man never becomes specially distinguished for anything unless he has demonstrated superiority along the line for which he claims to be a specialist. And this means not only an intimacy with the specialty but a knowledge of other branches as well. Perspective is a large asset to the specialist. A pain in the head may originate from a cold in the feet, and a head specialist who did not know this would not be a specialist--he'd probably be called a grafter or a quack.

There is a place in the printing business for specialization, just as there is in every other line, but such places are reached by other methods than tacking a sign on the door. They are reached after the same manner that a specialist in any branch reaches his goal, by the pathway of unstinted study and thought, and by practice and unlimited observation of kindred subjects.

The specialist-printer is a man who knows and appreciates the opportunities of one particular branch of the printing art above all others. That is not saying, by any means, that he does not know a great deal about other branches. It is necessary that he should. Just as the inspiration for a mural frieze may come from an intelligent appreciation of a pastel sketch, so may an idea for a booklet cover come from the composition of a newspaper advertisement. Things are co-related always.

The specialist-printer grows into his specialty. In a sense he does not make himself a specialist; the people to whom his work is attractive make him one. A man may say on embarking in the printing business, "I'm going to be a specialist on automobile catalogues." But simply saying so does not make him a specialist. If he went about forever and ever with a megaphone, remarking in calliopical tones, "I am a specialist on auto catalogues!" it wouldn't make him a specialist. The public would look on and say quietly, tersely, but meaningly, "Show us!"

But if the same man went to work to study the methods of printing that might be applicable to automobile catalogues, received a contract for such a job, did it well, and on the strength of its attractiveness received another contract, into which he put much thought and originality; if he did all work of such a nature better than others could do it, because he had given the subject much more thought, there would be a demand for his services on that class of work, and people would call him a specialist. If he should care to, then, he might tack a sign up on his door announcing that he made a specialty of the preparation of auto catalogues.

It is, however, seldom advisable to limit one's self entirely to one's specialty, even though much money may be made in that way. If a man does this he is quite likely to become set in his methods and lose that breadth of view that enhances work of any nature. As remarked before, perspective is an asset for the specialist, and the printer-specialist obtains a sense of perspective from a study of printing as a whole rather than from a concentrated study of a segment of the matter.

TO THE MASTER PRINTER,
In Any Country.

Dear Sir:—

At a meeting of the Typothetae, one of the members, in referring to hand composition, said: "Every one of you has been taught, since entering a printing office, that hand composition is a sink-hole, that the composing room is simply an adjunct, which you are compelled to carry in order to feed the large pressroom. How many of you have heard that statement before? How many of you, who were smaller and wanted to grow larger, only prayed for the day when you could have cylinder presses and make some real money? I want to tell you, that for the last twelve months, my composing room made a profit every month except two, and that was close, and I want to tell you that my large cylinder room of ten cylinder presses, running all of them but two 56-inch, showed a profit only during three months of the twelve. Your composing room today, I venture the assertion from my cost system experience of three years, is the more profitable of the two departments.

"I want to tell you that my experience is that the most profitable machinery I have in my place is the platen press, always. The next one is the job cylinder press. I have it divided in that way. Those two departments have never failed since we had a cost department, in three years, in showing a profit. Now, think of it! For only twenty-five per cent of the time last year did the large cylinder room show a profit, and the first year I had a cost system it did not show a profit one month. Why? Because this cost system puts upon the large cylinder pressroom the investment, the amount of money which I have in those big presses and in the automatic feeders and in the blocks and the chases, which I lost sight of. We don't charge enough. I don't know when we can get up to the point, but we must. The investment in the average man's cylinder pressroom is sometimes, yes, usually, fifty per cent of the total investment that he has in his business, and then he only figures it on a pro rata worked out on some guesswork of percentage, when the truth is that it is the sink-hole of his business."

Printers should give consideration to this statement about composing room profits, realize that it was brought out by actual business records and not hearsay or guesswork. If you are a master printer, look into conditions in your own plant, consider the comparatively small composing room investment; credit this department with all its actual accomplishments, and don't burden it with charges that belong to other departments, thus making out of it the sink-hole above referred to.

AMERICAN TYPE FOUNDERS COMPANY

PRODUCER OF DISTINCTIVE AND EXQUISITE DESIGNS IN

TYPE

BORDERS AND ORNAMENTS

TO WHOM IT MAY CONCERN:

In examining any large quantity of job printing, one cannot help being impressed at the widespread influence that the type founders exert through the medium of their specimen sheets. The forthcoming style in typography can be forecasted as accurately by means of these specimen sheets as the new styles of clothing are predetermined by the fashion plates of the London or the Paris tailors. The whole history of job composition may be studied by turning the leaves of the old specimen books. It is encouraging to note the improvement that is shown in these sheets one cannot help but feel that the type founders are not only leaders in type fashions and styles of composition, but that their influence is ever in the direction of better and more effective work. One of the latest improvements and greatest services that they have rendered the printer is in the creation of type families the production of type faces in closely related series and faces.

Of course the object of the founders in issuing specimen sheets is not entirely disinterested. These displays exert a strong educational influence, but their object, primarily, is to induce the printer to purchase new supplies in type series, ornaments and borders. In the production of their specimen sheets the type founders employ some of the best talent in the country, so that it is, perhaps, not surprising that the results are well worth preserving for their educational value. It might be said here, that while specimen books are almost as old as is type founding itself, the idea of introducing into their pages specimens of jobs, set in the series advertised, is comparatively new. It is an extremely valuable feature, and one that seems capable of still further expansion.

Of course it is good business policy for the type founders to exploit new type faces, and equally of course it is good policy for the job printer to buy these new job faces, for many are the customers, and good ones, too, whose demand is for something new and original. A great deal may be accomplished by a thoroughly competent compositor, with only a few faces of type at his command, but there is a distinct stimulus in a new series of type. On the whole, nothing gingers up the work of a shop like a new series, especially now when type faces are issued in related families, and it is possible to add a new series that will harmonize with the rest of the faces in the shop, merely adding to their usefulness, and detracting in no way from the distinctive character of the shop's output. A new series is an inspiration to the compositor and an attractive offering to

TO THE PRINTERS OF THE FUTURE,
IN ALL COUNTRIES.

DEAR SIRS:–

Once upon a time, not so long ago, the apprentice lived with his master or employer until he became a journeyman; and it frequently came about that a likely lively apprentice would marry his master's daughter, and, in time, become master himself. When they had found those to whom, if Dan Cupid so decreed, they would be willing to marry their daughters, they were just the lads who would do honor to their calling.

Perhaps those ancient printers were loath to introduce into their printing offices any who would not honor the typographic calling; but it seems that in our more "enlightened' age, the average master printer is careless of the qualifications and qualities of the lads now entering the printing trade. In a school of printing, the pupils of which are procured from printing offices, under an agreement by which they first work a short time in a printing office (presumably to ascertain their fitness), and are then sent to school, it was depressing to find that the first task of the able and conscientious instructor was to teach those strapping lads how to spell easy words! Some of the best printing plants in that city were deliberately hiring and entering into apprenticeship agreements with semi–illiterates. Shades of Franklin and Greeley!

The lads of fifteen or sixteen who have not had sufficient ambition to learn how to spell passably well have thereby advertised their unsuitableness to enter our semi–literary art–craft: if it is less than semi–literary or less than an art–craft it is because so many ignorant, unteachable people have been allowed

Everything for the Printer

TO THE MASTER PRINTER:

We frequently see letters published by the various trade journals devoted to the interests of the printing industry, having or their subjects the important questions: "How can the supp elp?" or "What should the allied trades do?" etc.

In reading these, one would come to the conclusion problem confronting the printing trades could be solved a se corrected by some action taken by, or on behalf of, upply-man. This is no new thing. The printers of this everal years ago not only had the same conditions as of today to ight, but in addition were confronted with the abuse of teur. They also suffered serious troubles in their me ork owing to the lack of a uniform system regulating the the different bodies of type produced by the various foun

After a concentrated effort the type founders succe elieving the printer of the offensive competition. With expenditure of money they gave the printers type of a uniform body, line and set.

The serious problem confronting the printer of today is one elating to the fundamental principles of cost and profitable sell- The ratio of printers who seem especially interested in these portant trade conditions is exceedingly small. Yet every printer hould be interested, and vitally interested. The natural a ertinent question is: "What is the printer to do to help h Individual effort is praiseworthy, but will not correct o eneral evil. What is necessary is a combined movement u art of the craft as a whole. It must be centralized, directed and ontrolled by an intelligent force or agency, thoroughly ith all the conditions and difficulties. It is generally hat the logical medium to take charge of a matter of this Printers Board of Trade. Are printers willing to work rganization for the promotion of the general welfa If not, why complain and fret over conditions

It is not encouraging to the supply-man to make an ny direction where action of his could be properly majority of the printers are not will themselves. There must be combined effort and a uni ose. A combination is not always a scheme for self a ent. On the contrary, it is often arranged for the m f all. Other trades have solved selling condition pro

Mr. Growing Printer,
In Any Location.
Dear Sir:--

Every man has his limitations and so has every shop. It is well for the printer, particularly the small printer, to bear this in mind and not bite off more than he can chew. It is well to hustle for business and it is good to get it. But getting business isn't all of the printing game; there's the doing of it.

In an Eastern city there was a youth who started a small shop, which he opened while studying at one of the technical schools. His work bore all the earmarks of originality and attractiveness. He had a pleasing personality and in his soliciting he used it to good advantage. He hired two men and left school to devote his entire time to his plant. The business was well on the high road to success.

And then his business grew some more. He failed to consider the limitations of his plant, failed to see that it was incapable of doing all the business that came in to him. Orders began to pile up, and customers were continually complaining about the delays. Still the youth went right on soliciting more work and promising its completion at any dates the customers asked.

An advertising agency had been giving him all its work, was chronically delayed, and finally, in disgust, it turned its jobs over to another concern. Others of his customers followed suit because they discovered that it was impossible to learn even approximately when they would get their work.

The youth, a few weeks ago, gave up the business--said he was losing money, which he was. Customers who accepted their work after having been put off for weeks were in no hurry to pay the bills. "He held us up on the job; we'll hold him up on the payment," was their

Mr. Progressive Printer,
Most Any Land,
Dear Sir:

There are hundreds of job presses constantly used in the production of imitation typewriter circular letters in our large cities. The rapid increase in the mail order business and use of follow-up systems has created an enormous demand for this work, and no ambitious printer can afford to overlook this avenue of profitable business endeavor.

The accurately reproduced typewriter faces offered by the American Type Founders Company, in such liberal variety, afford any progressive printer the opportunity of engaging in the manufacture of imitation typewritten letters as a specialty. Above the natural satisfaction that comes with success, as evidenced by the growth of business and plant, the American Type Founders Company has the higher satisfaction of knowing that this success is based on the appreciation, by the printers, of good and conscientious work.

Your customers can be induced to order a vastly increased amount of printing if you can show them the value of the modern circular letter. It is an experiment worthy of a serious trial, for many printers have built up a practically independent specialty business in this line of work.

The printing of "duplicate letters" is a profitable business, as good prices can be always maintained. The general effects of a circular letter, or "silent salesman", as it is sometimes called, are usually so remunerative that repeated orders flow in to the printer who can execute them with taste and despatch. Why not specialize along this line, Mr. Progressive Printer? It will pay you.

WHEN WE PART WITH THE OLD TYPE.

We have today put off our old type--type that has been in this office, some of it, for more than twenty years! It is like parting with an old friend, and we cannot let it go out of our sight without a parting farewell. And so we say farewell, old type! We have summered and wintered with you for many long years. We have sat up nights with you and beheld your impassive faces at early morning. Unceasingly you have done your duty. A thousand times you have clicked in the composi- stick, and a thousand various expressions have you given utterance to. You have been bound to the galley and visited the sanctum in proof. You have re- reproof and been discharged to speak your mind the next day to a public ever anxious for the news and never done finding fault with the types. You have sounded every note of human passion and uttered every tone of human feeling. You have imparted news from far countries and hurriedly picked up the events that were within sight of your own cases. You have embodied jests and jokes that have caused the sides to crack with laughter, and you have spoken sentiment that has opened wide the fountain of tears. Into how many weather articles you have entered! What vast eggs, the "last lays" of marvelous hendom, you have announced! How have your eyes been open to the changing evidences of the season, and how have your ears pricked up to catch the first rumor of exclusive intelligence, and how gleefully have you laughed that "no other paper has the news"! Ofttimes have you been "gratified to learn," and as often "regretted to announce" that this or that aston- event has occurred. How many "courteous and gentlemanly" friends have you not met, and how you have

To the Public Printer,
Anywhere.
Dear Sir:-

Richmond has a unique newspaper, the like of which no other town in the country has, or, if it has, a sample of that paper has not yet reached our exchange table. The paper referred to is the Ideal, a little twelve-page monthly, issued by the earnest church workers of the Second Baptist Church. These pages measure 12x8 inches and are filled almost to overflowing with the news of that particular church. There is not a single advertisement in it. Besides a church directory, which is the only "standing" matter in it, but which is informing and instructive, it carries the portraits of the deacons, the church clerk and other officials. The other pages are filled with articles by its numerous editors, and it has perhaps more editors than any other paper of its size in the whole world. Indeed, it has more editors than it has pages. There are no reporters on the Ideal staff, every writer being dignified with the title of editor. There are about sixteen of such editors on the staff, each department of church work being represented by an editor, whose name heads his or her article. These editors are of both sexes and vary in age from thirteen years to fifty-eight. Incidentally, the two extremes in age meet in one small family.

The Ideal is in the second year of its existence and is growing in popularity with the good people of the Second Baptist Church. The demand for it is such as to compel the "publishers" to increase the output to 1,200 copies per month.

There is no local subscription price for the paper, it being freely distributed to the congregation on the

Mr. Printerman,
Typewriterville.

Dear Sir:-

The Standard Typewriter is a reproduction of the work done by the Remington Standard Machine--the matrices being obtained from fac-simile impressions furnished by the manufacturers. This face commends itself to the printer producing imitation typewritten letters, because it is easy to read, does not tire the eyes, matches work of this Standard Typewriter, and the type is clean cut and durable.

There is a constantly increasing demand for the printing of imitation typewritten letters, and in all the leading cities wide-awake printers are taking advantage of this and increasing their facilities for doing this work.

If you will instal in your printing plant a good supply of this Standard Typewriter Type and let your customers know that you have it, many remunerative orders will undoubtedly be secured from this investment on your part.

The American Type Founders Company expends more each year than all other type founders in the world in producing new types and showing them attractively. With its immense business and great facilities it can afford to do this as no other founder can.

It will cost no more to buy American Type than it will to buy inferior designs or imitations. We are sending you periodically beautiful Specimens showing our new types, borders and ornaments. Not only is this rapidly enlarging our business, but if our material is used effectively it will largely increase your business.

Our interest is your interest, and your interest is our interest. If you order some of our latest type,

AMERICAN TYPE FOUNDERS COMPANY

DESIGNER OF AND LEADER IN

TYPE FASHIONS

To the Trade Associations,
In Every City.
Gentlemen:-

In the assembly room of the Franklin Printing Trades Association, of San Francisco, propositions long discussed are becoming realities. The binding of the varied branches of the graphic arts into one is almost accomplished. Each division has awakened to the fact that the one manifest principle, the one actuating motive of education and advancement can only be attained by unity. To this end all are working.

The invitation sent out by the Franklin Printing Trades Association has been enthusiastically accepted by the Lithographers Board of Trade of California and the Employing Bookbinders Association. The result is that regular weekly and numerous special meetings of these associations are held in the assembly room for the purpose of devising the best means of consolidation, with no obliterating clauses. That is, merging only on general principles, retaining individuality, while sharing expense and uniform system.

A sequence of events has brought about this healthy get-together spirit. There was the installation of a uniform cost system, which opened men's eyes to their own mistakes instead of their neighbors' misdeeds and showed them that financial failures were wrought by ignorance rather than rivalry. Then the pleasant trip to Portland, with its mutual sympathies and understandings, drew them together as friends, where before they had been merely acquaintances.

The power and scope of the Allied Association will be to deal only with matters which pertain to more than one branch of the trade, except when requested in writing by the delegates of an affiliated association to deal with matters which directly affect them alone.

To the Printer and his Apprentice,
Applicable Anywhere.

Dear Sir:-

The child is father to the man, and the devil is father to the future printer. It is a wise master printer that knows his own devil, for by knowing him he is assuring three things: a degree of content for the devil in the future; the addition of a worthy workman to the ranks of the craft; his own acquisition of a young- who will do something better than pi forms and bring wrong sorts.

The world is full of misfits. There are more men out of place in this world than there are in their proper sphere. The industries and the crafts all suffer on account of this fact.

The master printer should do his share to avoid this condition, at least to ameliorate it in the future. If only all master printers would do what they are able in this direction, the future of the craft would be assured of standing upon a much higher plane. The master printer ought to spend as much time in the selection of a devil as he would spend in the selection of a new web press or a paper cutter.

In the first place, the printing office is no place for a boy whose intellectual resources are below par. A printer needs to use brains in every stage of the work he is engaged in. If he hasn't brains to use he is going to become a human shuttlecock, battered from shop to shop, filling in where he finds a chance, performing an uncongenial task for the mere price of lodging and board. Therefore, unless the applicant be bright and intelligent, it is a positive injury to start him along the pathway of life in the typographic calling.

How are the appr s in t-shops usually

Ein reicher Mann hatte eine beträchtliche Geldsumme, welche in ein Tuch eingenäht war, verloren. Er machte seinen Verlust bekannt und bot dem ehrlichen Finder eine Belohnung von hundert Talern an. Da kam bald ein guter und ehrlicher Mann daher gegangen. „Dein Geld habe ich gefunden. Dies wird's wohl sein! So nimm dein Eigentum zurück!" So sprach er mit dem heitern Blicke eines ehrlichen Mannes und eines guten Gewissens. Der andere machte auch ein fröhliches Gesicht, aber nur, weil er sein verloren geglaubtes Geld wieder hatte. Denn wie es um seine Ehrlichkeit aussah, das wird sich bald zeigen. Er zählte das Geld und dachte unterdessen geschwind nach, wie er den treuen Finder um seine versprochene Belohnung bringen könnte. „Guter Freund," sprach er hierauf, „es waren 800 Taler in das Tuch eingenäht. Ich finde aber nur noch 700 Taler. Du wirst wohl eine Naht aufgetrennt und deine hundert Taler herausgenommen haben. Da hast du wohl daran getan. Ich danke dir." Der ehrliche Finder, dem es weniger um die 100 Taler als um seine unbescholtene Rechtschaffenheit zu tun war, versicherte, daß er das Päcklein so gefunden habe, wie er es bringe. Am Ende kamen sie vor den Richter. Beide bestanden auch hier noch auf ihrer Behauptung; der eine, daß 800 Taler eingenäht gewesen seien, der andere, daß er von dem Gefundenen nichts genommen und das Päcklein nicht versehrt habe. Da war guter Rat teuer. Aber der kluge Richter, der die Ehrlichkeit des einen und die schlechte Gesinnung des andern voraus zu kennen schien, griff die Sache so an: er ließ sich von beiden über

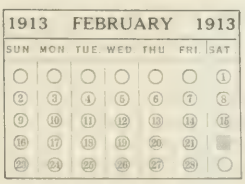
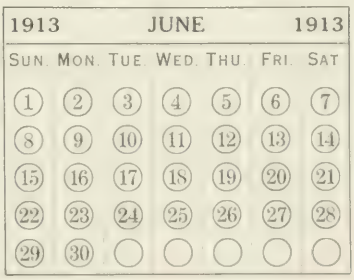
MINIATURE CALENDAR FIGURES

These Calendar Figures make a very attractive calendar on blotters and for a multiplicity of commercial requirements. Many printers make a specialty of monthly blotters and other advertising forms which carry a calendar, and will readily appreciate the fact that these new figures will impart a distinctiveness to all such printing.



12 Point Calendar No. 1, per font $1 25
10 Point Calendar No. 1, per font 1 00
8 Point Calendar No. 1, per font 1 00
6 Point Calendar No. 1, per font 1 00

Miniature Calendar Figures are put up in usable fonts containing sufficient for yearly calendars in the 6 Point size, and for six months in the 8, 10 and 12 Point sizes, including blank circles.



REGARDING OUR ACCENTED LETTERS

So great is the variety of accented letters made by the American Type Founders Company that it is impracticable to attempt to list the individual characters in this catalogue. Such a list would necessarily be incomplete before this book was off the press, because important additions are being made almost daily. The list printed herewith is therefore limited to the type faces shown in this specimen book for which accented letters are made. A complete list of accents for these and other faces is published by the American Type Founders Company in loose leaf form, for which a suitable leather cover is provided, and may be obtained from any of our Selling Houses, for temporary use, or the accent list may be purchased outright for $2.00. This price includes the mailing of changes and additions as made from time to time. To those having considerable use for accents this book will be found a great convenience.

Curtis Post—Caps and Lower Case: 12, 14, 18, 24, 30, 36, 42 and 48 Point.

Della Robbia—Caps and Lower Case: 6, 8, 10, 12, 14 and 18 Point.

Engravers Old English—Caps and Lower Case: 6, 8, 10, 12, 14, 18, 24, 30, 36, 42, 48, 60 and 72 Point.

Heavy Caslon—Caps and Lower Case: 6, 8, 10, 12, 14 and 18 Point.

Light Dorsey—Caps and Lower Case: 5, 6, 8, 10, 12, 14 and 18 Point.

Lining Boldface No. 520—Caps and Lower Case: 5½, 6, 7, 8, 9, 10, 11 and 12 Point.

Lining Boldface Italic No. 520—Caps and Lower Case: 6, 8, 9, 10, 11 and 12 Point.

Lining Caslon No. 540—Caps and Lower Case: 6, 8, 10, 12 and 14 Point.

Lining Condensed Title No. 523—Caps and Lower Case: 5, 6, 8, 10, 12, 18, 24 and 30 Point.

Lining DeVinne No. 2—Caps and Lower Case: 5½, 6, 8, 10, 12, 18, 24, 30, 36, 48, 54, 60 and 72 Point.

Lining DeVinne Condensed No. 2—6, 8, 10, 12, 14, 18, 24, 30, 36, 42 and 48 Point.

Lining French Oldstyle No. 552—Caps, Lower Case and Small Caps: 6, 8, 9, 10, 12 and 18 Point.

Lining Gothic No. 544—Caps and Lower Case: 6, 8, 10, 12, 14, 18, 24, 30, 36, 42 and 48 Point.

Lining Gothic No. 545—Caps and Lower Case: 6, 8, 9, 10, 12, 14, 18, 24, 30, 36, 42, 48, 54 and 60 Point.

Lining Gothic Condensed No. 523—Caps and Lower Case: 6, 8, 10, 12, 18, 30 and 36 Point.

Lining Gothic Condensed No. 529—Caps and Lower Case: 12, 14, 18, 24, 30, 60 and 72 Point.

Lining Oldstyle No. 523—Caps, Lower Case and Small Caps: 5, 5½, 6, 8, 10 and 12 Point.

Lining Oldstyle Italic No. 523—Caps and Lower Case: 5, 5½, 6, 8, 10 and 12 Point.

Lining Oldstyle No. 550—Caps, Lower Case and Small Caps: 6, 7, 8, 9, 10 and 12 Point.

Lining Oldstyle Italic No. 550—Caps and Lower Case: 6, 7, 8, 9, 10 and 12 Point.

Lining Oldstyle Antique No. 560—Caps and Lower Case: 6, 8, 9, 10, 12, 14, 18, 20, 24, 30, 36, 48, 60 and 72 Point.

Lining Roman No. 510—Caps, Lower Case and Small Caps: 6, 8, 10, 11 and 12 Point

Lining Roman No. 524—Caps and Lower Case: 5 Point.

Lining Roman No. 527—Caps and Lower Case: 5 and 5½ Point.

Lining Ronaldson Oldstyle No. 551—Caps, Lower Case and Small Caps: 6, 7, 8, 9, 10, 11, 12 and 14 Point.

Lining Ronaldson Oldstyle Italic No. 551—Caps and Lower Case: 6, 7, 8, 9, 10, 11 and 12 Point.

Lining Schoeffer Oldstyle No. 2—Caps and Lower Case: 8, 10, 12, 14, 18, 24, 30, 36 and 48 Point.

MacFarland—Caps and Lower Case: 6, 7, 8, 9, 10, 11, 12, 14, 16, 18, 20, 24, 30 and 36 Point.

MacFarland Italic—Caps and Lower Case: 6, 8, 9, 10, 12, 14, 16, 18, 20, 24 and 30 Point.

New Caslon—Caps and Lower Case: 5, 6, 8, 10, 12, 14 and 18 Point.

New Caslon Italic—Caps and Lower Case: 6, 8, 10, 12, 14 and 18 Point.

New Model Remington Typewriter—Caps and Lower Case: 12 Point.

New Model Smith Premier Typewriter—Caps and Lower Case: 12 Point.

Oliver Typewriter—Caps and Lower Case: 12 Point.

Post Condensed—Caps and Lower Case: 6, 8, 10, 12, 14, 18, 24, 30, 36, 42 and 48 Point.

Post Monotone—Caps and Lower Case: 5 on 6, 6, 8, 10, 12, 14, 18, 24, 30 and 36 Point.

Post Monotone No. 2—Caps and Lower Case: 6, 8, 10, 12, 14, 18, 24, 30 and 36 Point.

Post Oldstyle Italic—Caps and Lower Case: 6, 8, 10, 12, 14, 18, 24, 30, 36, 48 and 60 Point.

The American Line Leaders herewith shown are the only correctly proportioned and accurately cut Leaders ever designed and cast. These have been cut in five distinct series, with a uniformity and harmony in the grading of the different sizes which will be appreciated by discriminating printers. This perfection has been attained only through the use of newly invented tools belonging exclusively to the American Type Founders Company. On this page is an impression of each size of the five styles. These Leaders are cast from Copper Alloy type metal, which excels all other makes in lightness and in wearing qualities. For the special convenience of printers they are put up in job fonts of three and five pounds and sold at regular body type rates, the same as charged when ordered in bulk. The American Line Leaders line accurately with all American Line faces cast on larger or smaller bodies by justification with point leads and slugs. A practical illustration is given on the following page.

AMERICAN LINE LEADERS

Examples showing how our Leaders print

Specimen of 12 Point American Line Leaders No. 545 aligned with 18 Point and 30 Point Typo Script

Shipped in good order by _____ on board steamer _____

Copper Alloy of American Line articles as numbered below to be delivered

in good order to _____

at the port of _____ or his heirs or assigns.

to pay the rate of _____ and charges $_____

Dated at _____ this _____ day of _____ 1912.

Specimen of 12 Point American Line Leaders No. 544 used with 12 Point Lining Caslon Italic No. 540

Hungarians	*Keler Bela*
Clover Blossom	*Rogers*
Serenade	*Beethoven*
Who is Sylvia	*Schubert*

Specimen of 12 Point American Line Leaders No. 541 used with 12 Point Century Oldstyle Italic

Allegro	*Mattei*
Mattinata	*Nieniawski*
Night Hymns	*Thomas*
Leave Not	*Bullard*

Specimen of 10 Point American Line Leaders No. 542 used with 10 Point Cheltenham Oldstyle

Maiden's Lament	Scarlatti
Mazurka in B Minor	Saint Saens
Mandalay	A. G. Thomas
Voci Di Primavera	Strauss

Specimen of 10 Point American Line Leaders No. 543 used with 10 Point Clearface

Son of the Puzta	Dillon
Sunset	Elizabeth Coolidge
The Podsnap Hunt	Hammel
Le Cygne	Sir Harry Hoguet

Specimen of 8 Point American Line Leaders No. 541 used with 8 Point Della Robbia

Planet Venus	February 14
La Champagne	March 17
Montauk Point	October 19
Virginian	November 21

Specimen of 8 Point American Line Leaders No. 544 used with 8 Point Century Expanded

The Year's at the Spring	Haydn
'Neath the Stars	Sinzlee
Presto in E Major	Beethoven
Fifth Nocturne	Leybach

Specimen of 6 Point American Line Leaders No. 543 used with 6 Point Roman No. 590

Benefits of the Kindergarten	Chickering
The Modern Child	Lillian A. Robinson
Some Curious Information	Grace Howard
American Husbands	Kathie H. Porter

Specimen of 6 Point American Line Leaders No. 542 used with 6 Point Cheltenham Medium

Domestic Economy	Mary Ottman Bates
Inventions of the Century	Ramage
The Servant Question	Rachel Lowentritt
Personation	Alice Elizabeth Moran

Braces, Dashes, Fraction Marks and Canceled Figures

THREE POINT NEW METAL BRACES

3 Point — Per dozen of any one size $0 60 — Per font $1 25

312 315 318 321 324 327 330 333 336 339

342 348 351 354 360 366

369 372 378 384

387 390 396

Made in 12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42, 48, 51, 54, 60, 66, 69, 72, 78, 84, 87, 90 and 96 Point lengths

The last two figures of each number indicate the length of Brace in points

FOUR POINT NEW METAL BRACES

4 Point — Per dozen of any one size $0 60 — Per font $1 25

412 416 420 424 428 432 436 440 444 448

452 456 460 464 468

472 480 484

488 496

Made in 12, 16, 20, 24, 28, 32, 36, 40, 44, 48, 52, 56, 60, 64, 68, 72, 80, 84, 88 and 96 Point lengths

The last two figures of each number indicate the length of Brace in points

SIX POINT NEW METAL BRACES

6 Point — Per dozen of any one size $0 50 — Per font $1 00

612 618 624 630 636 642 648 654

660 666 672 678

684 690 696

Made in 12, 18, 24, 30, 36, 42, 48, 54, 60, 66, 72, 78, 84, 90 and 96 Point lengths

The last two figures of each number indicate the length of Brace in points

SIX POINT METAL BRACES

6 Point — Per dozen of any one size $0 50 — Per font $1 00

1 2 3 4 5 6

Font contains six of each. The number also indicates the length of each Brace in 12 Point ems

SIX POINT BRACES AND DASHES No. 2

6 Point — Per font $1 25

1 2 3 4 5 6 7 8 10 11

9 12

Font contains eight each Nos. 1 to 7, four each Nos. 8 to 12

Nos. 1 to 7 are for piecing. Nos. 8, 9, 10, 11 and 12 are complete and are 2, 3, 4, 5 and 6 ems respectively

DIAGONAL FRACTION MARKS

Font containing three sizes $0 75

Copper Alloy Imprints are recommended as they have a uniform clearness of face not obtainable in so small an electro line. When wanted in quantities the Copper Alloy Imprints would be cheaper than the electro.

ELECTROTYPED IMPRINTS

Electrotyped Imprints made from any of the type styles shown above for Copper Alloy Imprints. Price of single imprint 50 cents. If more than one is ordered, the duplicates at regular electrotype scale price.

MISCELLANEOUS AUXILIARIES

Below is shown a comprehensive line of Inland Type Foundry's Miscellaneous Auxiliaries. For the convenience of our customers we have printed a circular giving complete detail as to the various characters, sizes, and the manner in which they are fonted. We will send this circular to any one interested. When requesting this circular be sure to mention that it is the Inland Type Foundry's Miscellaneous Auxiliaries that are wanted.

Time-Saving Mail List Type and Logotypes

EIGHT POINT LINING MAILER TYPE—TIME SAVING

Rev. J J Jones 3Feb14
CINCINNATI OHIO

John Clement 8Jan13
KENNEBUNKPORT ME

Every character is cast 5 Point set; therefore if stick is set to multiples of 5 Point, justification is eliminated and perfect adjustment is effected. The regular justifier, which accompanies font, is the only one needed.

Warner Jolly 9Apr12
HOUSTON TEX

Rev. Wm Ansel 8Dec14
SAN BERNARDINO CAL

Example in combination with 10 Point Mail List Logotypes No. 122

Dr Chauncey Depew 3 Mar 14

Mrs Mary Walker 31 Oct 15

Mr James J.Corbett 3Jan15

Every character is cast on en-quad set, and only en-quads and 4-to-em spaces are used for spacing. By setting sticks to a multiple of 10 Points, spacing and justification become mere child's play; in fact, this type is self-spacing. Although the face is large, on examination it will be found that Time-Saving Mail List Type is as condensed, on the average, as ordinary Mail List Type. Price same as 10 Point Roman.

Rev Abe Slupsky 30 Nov 14

Miss B.Hesselburg 3 Dec 14

Theo.Roosevelt 4 Apr 14

A complete font for 1000 single-line names, as above, will weigh as follows: Century Expanded including Spaces and Quads, 100 pounds; Century Bold Caps or Railroad Gothic No. 1 Caps, 10 pounds; Logotypes, 4½ pounds. Where Counties and States are added (not using Century Bold or Railroad Gothic No. 1 Caps) from 25 to 50 pounds of extra sorts and quads would be required, for which a special sort order must be sent. Century Bold Caps and Railroad Gothic No. 1 Caps are the only faces of Post Office type furnished as per above specifications; are put up only in fonts of 10 pounds or multiples thereof.

Each font contains sufficient figures for any one month of the year. You would often have occasion to set up a monthly calendar if you possessed a font of these figures. They are inexpensive and a good investment.

1914 MAY 1914

Fonts include one each of the date logos, seven blanks, one each of the day logos, sufficient type, figures and spaces for every month of the year from 1912 to 1932 inclusive

TRADE MARKS CAST IN TYPE METAL

On this page are shown a number of well-known trade-marks and devices made by our Adcut process. By this process the original design is accurately reproduced in type metal at a figure conceded to be less than that charged for electrotypes, when one hundred or more Adcuts are ordered at a time. Every Adcut is of uniform height and cast on point body. We have published a handsome pamphlet giving the scale of prices of Adcuts besides much interesting information regarding trade-marks. If interested, send to our ADCUT DEPARTMENT for a copy of this pamphlet.

TRADE MARKS CAST IN TYPE METAL

The well-known trade devices shown on this page are but a few that have also been reproduced by our Adcut process. The cheapness of Adcuts makes it practicable to use all kinds of trade devices more generously and effectively than heretofore. It is not often that an article recommends itself as being cheaper and very much better in quality, but the examination of an Adcut, which will be sent on request, will convince at a glance that Adcuts form an exception. Printers prefer Adcuts to electrotypes because they are absolutely uniform in height and all other dimensions, and perfectly flat on top, justifying with the type better and also printing better.

Send to our ADCUT DEPARTMENT for a copy of our Adcut Pamphlet giving prices and any information desired.

We have reproduced hundreds of imprints for printers and publishers by our Adcut process and our customers find them superior to electrotypes. Adcuts are sold only in quantities of one hundred or more each size and design. If you are interested ask for our Adcut pamphlet, which contains a complete scale of prices and gives much other valuable information regarding this new method of casting cuts in type molds.

Decorative Material

The addition of suitable Decorative Material, costing but a trifle, will add dollars' worth of selling value to many kinds of Printing, without increasing the cost of production. Those who have had advertising experience know that an appropriate and emblematic ornament photographically impresses the mind of the reader of an advertisement and cinches the argument

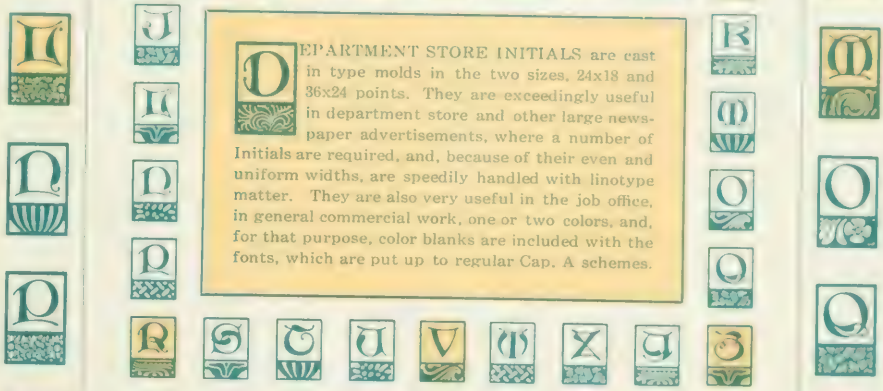
DEPARTMENT STORE INITIALS

Accurately Cast in Type Molds

DEPARTMENT STORE INITIALS are cast in type molds in the two sizes, 24x18 and 36x24 points. They are exceedingly useful in department store and other large newspaper advertisements, where a number of Initials are required, and, because of their even and uniform widths, are speedily handled with linotype matter. They are also very useful in the job office, in general commercial work, one or two colors, and, for that purpose, color blanks are included with the fonts, which are put up to regular Cap. A schemes.



Character for printing in two colors, has half point bevel to give

glass register

FRENCH CAST SQUARES

FRENCH CAST SQUARES are made in the five sizes, 12, 18, 24, 30 and 36 point, for printing in one or two colors. They are designed for use with one of the most useful brass rule faces with which a printing office can be provided: 1 point face, flush to side of a 1½ point body. Two of these rules, bevel to bevel, will "match up" with the little black corner squares in the 12 point size, and only require even point spacing for the other sizes. In the middle, or between these two parallel lines, place whatever material that is necessary to give "balance" to the work.

THE mortises in these initials are cast accurately to points both ways, so that types of the same body as the mortises fit without justification, while the smaller types are justified with point leads or spaces. This method of casting the mortises is used exclusively by the American Type Founders Co. and insures the printer a great saving of time and annoyance in both justification and printing. The body is also point set

Three Point Borders
The Three Point Borders shown on this page are considered the most popular designs in Running Borders on the market. For neat labels, dainty panel work and similar printing they will be found remarkably effective. The ease with which these Borders can be assembled is at once apparent to the discerning printer and will be found a strong factor in shops where high-grade work in record time is essential, in fact these Borders will make an excellent addition to any composing room

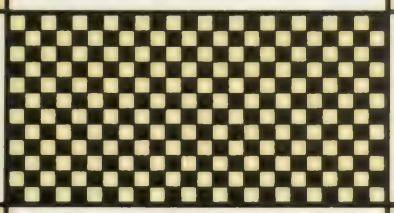
Tricky Borders and Quadruple Cast Squares

TRICKY BORDER is made in the four sizes, 12, 24, 36 and 48 point. It is a very ingenious border, in that two colors can be printed from one character. For printing the first color the character is set nick up as usual. For the second color the character is turned once around, the nick to either side, as here: Hence, the initial outlay for a two-color border is the price of only one font, and there is a further saving in that it is necessary to put together but one form.

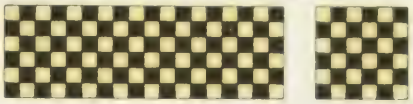


TRICKY BORDERS

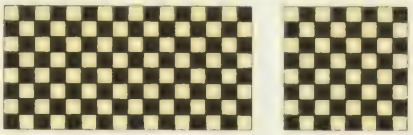
12 Point No. 1, 54 inches, $1.50

24 Point No. 2, 36 inches, $1.65

36 Point No. 3, 24 inches, $1.65



48 Point No. 4, 18 inches, $1.50



QUADRUPLE CAST SQUARES

MADE in eight sizes: 6, 8, 10, 12, 18, 24, 30, and 36 point, for printing in one or two colors. The brass rule faces with which they are to be used are indicated by the numbers. 24 point No. 1, the lines being 1 point, should be used with 1 point flush with body face rule; No. 2, the lines being 2 point, should be used with a 2 point flush with body face rule; No. 3 with 3 point, and so on. A labor-saving font each of 1, 2, 3, 4 and 6 point will provide brass rule for the complete series. These Quadruple Cast Squares, with a proper supply of our superior, accurately-cut rule, is an equipment that will cost but little, and can be used—a great deal!

FOR USE WITH BRASS RULE

CAST PANEL PIECES are made in the two sizes, 12 and 18 Point. In each size there are two patterns: one with which a single rule is used, the other with which two rules are used. All the rules required are standard, commonly used faces. A labor-saving font each of our 1, 2, 3, 4 and 6 point flush-with-body face rules will provide for the entire outfit. These are rule faces that most offices are already provided with. While the Cast Panel Pieces do not dispense with the use of a mitering machine in an office, they do, in actual use, with a proper equipment of our accurately cut brass rule, dispense with mitering. That is their intent; they make possible much better rule designs, without the expense and delay of cutting and mitering. For two-color work the single-line designs, with brass rule, are used in setting form for the second color.

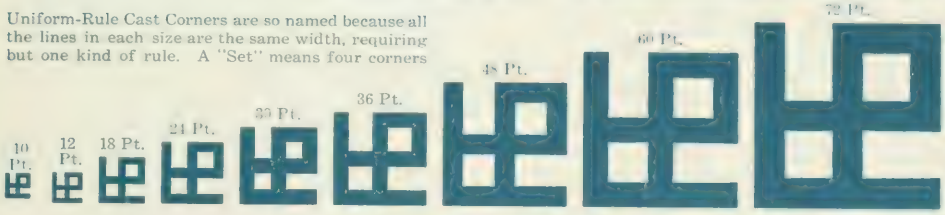
UNIFORM-RULE CAST CORNERS FOR ONE COLOR

THESE are very desirable because of the big sizes (being made to include 48, 60 and 72 point), and can be used to excellent advantage in lines of bigger work than that which is provided for in other series of similar material. The nine sizes make a useful outfit

10 Point Font contains 16 sets Use 2 Point Face Rule	50c
12 Point Font contains 12 sets Use 2 Point Face Rule	50c
18 Point Font contains 8 sets Use 3 Point Face Rule	50c
24 Point Font contains 5 sets Use 4 Point Face Rule	50c
30 Point Font contains 5 sets Use 6 Point Face Rule	75c
36 Point Font contains 4 sets Use 6 Point Face Rule	80c
48 Point, per set Use 8 Point Face Rule	20c
60 Point, per set Use 10 Point Face Rule	25c
72 Point, per set Use 12 Point Face Rule	30c

Uniform-Rule Cast Corners are so named because all the lines in each size are the same width, requiring but one kind of rule. A "Set" means four corners



UNIFORM-RULE CAST CORNERS FOR TWO COLORS

10 Point Font contains 8 sets Use 2 Point Face Rule	50c
12 Point Font contains 6 sets Use 2 Point Face Rule	50c
18 Point Font contains 4 sets Use 3 Point Face Rule	50c
24 Point Font contains 3 sets Use 4 Point Face Rule	60c
30 Point Font contains 3 sets Use 6 Point Face Rule	90c
36 Point Font contains 2 sets Use 6 Point Face Rule	80c
48 Point, per set Use 8 Point Face Rule	35c
60 Point, per set Use 10 Point Face Rule	40c
72 Point, per set Use 12 Point Face Rule	50c

The large sizes are very useful for showcard or placard work and large cover pages, and are particularly desirable for newspaper ads.

In the above list a "Set" means eight types, that is, four types of each color, or four complete corners. Quantities listed are the smallest which will be sold

Items Made of Brass for the Composing Room

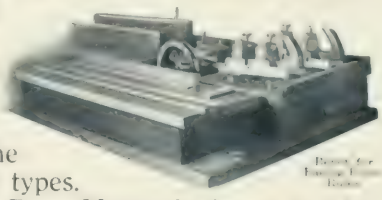
By the
American
Type Founders
Company

A Corner of the Brass Rule Department of the American Type Founders Company

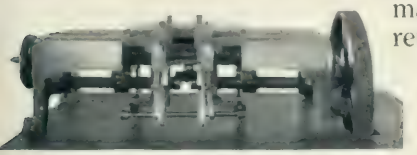
NEW SYSTEMATIC POINT-FACE BRASS RULE

Point Faces as well as Point Bodies

NEW Systematic Point-Face Brass Rule means that our Brass Rule faces are graduated by a scientific Point-Face System never before attempted, which adds greatly to their value. All single line rules thicker than hairline are graduated by one-quarter points up to one point, and by one-half points above one point, whether placed in center or on side of the bodies. Double and Parallel Faces are graded to give uniform color and are also made flush on the body. This assists the compositor in making a neat joint when single cross rules are used in a page. The thickness of the lines are indicated by the figures in brackets, so that printers may know the exact thickness of both face and body, and in ordering two or more kinds of Brass Rules to work together, may be sure of harmonious results. This departure from the rule-o'-thumb method of designing brass rule by standardizing the faces is distinctly an improvement and as important as was the substitution of point bodies for the old irregular bodies of types.



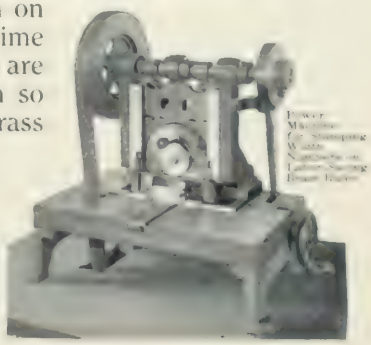
Unexcellable quality is guaranteed to all purchasers of the Brass Materials shown in this section of our catalogue by the use of the very best wearing brass, which is planed, faced or engraved, cut and numbered by special machines of extraordinary precision in charge of skillful operators of long experience. This claim is made in no boastful spirit, for it is simply a matter of good business policy, as the most extensive manufacturers of Brass Materials for printing uses, to lead in quality as well as quantity. Therefore, no effort is spared to maintain our leadership in quality as the surest method of retaining our leadership in output.



Power Machine for Rubbing Edges of Brass Rules After they are Sawed

The faces of Brass Rules and Corners shown in this section need no encomiums, as their merits are displayed in the following specimens, and their variety is such as to meet every requirement of every grade of printing.

Particular attention is given to accuracy of height and accuracy of lengths. The standards and gauges which establish these accuracies are as nearly infallible as anything can be. These accuracies are labor-saving in type composition, facilitating joining of miters, and assist in obtaining equal impression on conjoining pieces of rules or corners, thus saving much time otherwise consumed in make-ready where rules are used which are inaccurately planed or cut. There is nothing in a type form so difficult to underlay and overlay as brass rules; inaccurate brass rules are uneconomical.



Special Faces and Fonts and Matching Faces

Although our assortment of faces and fonts would seem to cover all requirements, we are prepared to match all faces of Brass Rules now in the market on orders of sufficient size, and to make Rules with special thicknesses, widths and line arrangements, and to supply fonts to special schemes.

1406	6 Point	30

Uniform Grade Series

In making these Uniform Grade faces it was not always possible to obtain point faces, but in most cases these rules can be used either with face rules Nos. 2022-2042-2062-2082 (respectively ½-½-¾ and 1 point faces) or with fullface rules ⅜, ⅝, 1, 1½, 2, 3, 4, 5 and 6 point.

NO	BODY		PER FOOT
1452	2 Point	(1/4)	$0 10
1453	3 Point	(1/2)	15

12312	12 Point	(4)	60
12318	18 Point	(6)	90

All rules on this page (except dotted rules) are flush on body. The figures in parentheses show the face of the rule in points.

Brass Rule Shown in Series

Unless otherwise noted, Brass Rules are made in 24-inch strips

Uniform Grade Series

These three uniform grade series supplant the old rule-of-thumb faces. They are all made flush on body so that a cross rule of 2 point hair line rule No. 1002 will fit snug against the light line of the rule.

Any of the old faces formerly shown can be obtained on short notice but are not usually carried in stock.

NO	BODY	PER FOOT
1412	2 Point	$0 10
1413	3 Point	15

1436	6 Point	30
1438	8 Point	40
14310	10 Point	50
14312	12 Point	60

Point Face Series

These rules are made to match regular point face rules, enabling the compositor to use single cross rules to match either the light or heavy line in panel and work of like nature. For instance: 6 point No. 1266 can be made up with 3 point No. 2043 and 3 point Fullface No. 1153. Also 12 point No. 12612 can be made up with 1 and 6 point Fullface rules or with 6 point Fullface and No. 2082 using two point leads between.

NO	BODY		PER FOOT
1264	4 Point	(2-½)	$0 20

5 Pound	8 75	8 25	7 25	6 75	6 75	6 50	6 50	6 50	6 00

Special prices on large quantities. Write for estimates.

See page 1123 for prices of 18 Point Labor-Saving Rule

TABLE D

Fonts of miters are put up at the following list prices, containing the number of sets as noted: A "set" of miters consists of 4 right and 4 left miters:

POINT	NO. SETS 2 1-2 EMS	NO. SETS 5 EMS	PRICE	POINT	NO. SETS 2 1-2 EMS	NO. SETS 5 EMS	PRICE
1	2	2	$0 50	6	2	1	$0 50
1½	2	2	50	7	2	1	50
2	2	2	50	8	2	1	50
3	2	2	50	9	1	1	50
4	2	2	50	10	1	1	50
5	2	1	50	11	1	1	50
5½	2	1	50	12	1	1	50

Larger than 12 point figure "price per piece," according to Tables H and I, on page 1109, plus charges for mitering in Table F, below.

TABLE E

Miters will be sold in single sets from 1 to 6 ems in length at the following list prices per set (4 each right and left):

POINT	PRICE PER SET	POINT	PRICE PER SET	POINT	PRICE PER SET
1	$0 15	5	$0 25	9	$0 40
1½	15	5½	25	10	40
2	15	6	25	11	40
3	15	7	25	12	40
4	15	8	25		

Larger than 12 point figure "price per piece" according to Tables H and I, on page 1109, plus charges for mitering in Table F, below:

TABLE F

Page Miters and Miters Over 6 Ems

Are sold by the "price per piece" as per Tables H and I (page 1109) for length of rule used plus the following list prices per page or set of miters:

PAGES	1 TO 5 1-2 PT. PER PAGE	6 TO 12 PT. PER PAGE	14 TO 18 PT. PER PAGE	OVER 18 PT. PER PAGE
1 to 8	12c	14c	16c	20c
9 to 16	11c	13c	15c	19c
17 to 32	10c	12c	14c	18c
Over 32	9c	11c	13c	17c

TABLE K

Space Rule Fonts

Consisting of all faces and bodies from 1 to 12 Point containing an equal number of each length from 1 em pica to 4 ems pica, inclusive, by ½ em pica. Fonts weigh approximately, 1 pound.

BODY	NUMBER PIECES EACH LENGTH	PER FONT	BODY	NUMBER PIECES EACH LENGTH	PER FONT
1	90	$4 50	6	15	$2 10
1½	59	3 40	7	13	2 10
2	45	2 85	8	11	2 00
3	30	2 50	9	10	2 00
4	22	2 30	10	9	1 90
5	18	2 25	11	8	1 80
5½	16	2 15	12	7	1 70

For sorts of space rule see Table H, page 1109

AMERICAN LINE BRASS LEADERS

American Line Leaders are made in three styles. Style 101, a fine dot; style 103, an open dot or short hyphen; style 105, a regular hyphen, which offers a selection varied enough to meet the requirements of all printing offices.

When ordering American Line Leaders give body and style desired.

When ordering leaders to line with any type not on American Line be sure and send sample type H and m and state style of leaders desired.

For specimens of Brass Leaders see top of page 1105.

LABOR-SAVING FONTS

These list prices are for Regular Scheme Fonts. In the 5-pound fonts the longest piece is 15 ems, and in the 10-pound fonts 20 ems, cut by half ems pica up to 4 ems and even ems pica above 4 ems.

Sorts and special scheme fonts are cut to order and sold at "price per piece" listed in Tables H and I. All bodies other than those listed are cut to order only and sold at "price per piece" listed in Tables H and I, on page 1109.

Fonts of short pieces are listed in Table K.

SIZE FONT	6 POINT	8 POINT	10 POINT	12 POINT
1 Pound	$1 70	$1 60	$1 50	$1 40
2 Pound	3 40	3 20	3 00	2 80

Fancy Rule with Round Corners

BRASS ROUND CORNERS

Price, per Set of Four, 6 Point, 50c; 12 Point, 75c; 18 Point, $1.00

Brass Brazed Corners are made for this rule, and are shown on pages 1114 to 1117. Fonts are put up without Miters or Round Corners, which are sold separately in sets.

Brass Round Corners for this Series of Rule are on 36 Point mortised body.

For prices of Labor-Saving Fonts of Rule see page 1108

18 POINT RULE

Rule larger than 12 Point is not called for in regular fonts in sufficient quantities to make it advisable to carry regular scheme fonts in stock. It is sold by the piece according to prices in Tables H and I on page 1109.

As a basis for figuring we give below schemes for fonts of 18 Point rule, weighing approximately 3, 5 and 10 pounds.

3 POUND FONT

1 to 4 ems by one-half ems—4 pieces each.
5 to 14 ems by ems—2 pieces each.

The above pieces (see Tables H and I on page 1109), amount to $1.14.

5 POUND FONT

1 to 4 ems by one-half ems—4 pieces each
5 to 10 ems by ems—3 pieces each.
11 to 18 ems by ems—2 pieces each.

The above pieces (see Tables H and I on page 1109), amount to $1.66.

10 POUND FONT

1 to 4 ems by one-half ems—4 pieces each.
5 to 18 ems by ems—3 pieces each.
19 to 25 ems by ems—2 pieces each.

The above pieces (see Tables H and I on page 1109), amount to $3.21.

Miters (18 Point, 2½ ems pica long inside, would amount to 72 cents per set and 5 em miters $1.04 per set, figured from Table H (using outside measure) and the charge for mitering in Table F.

18 Point No. 17818. Per foot 90 cents

6 Point No. 1786. Per foot 30 cents

12 Point No. 17812. Per foot 60 cents

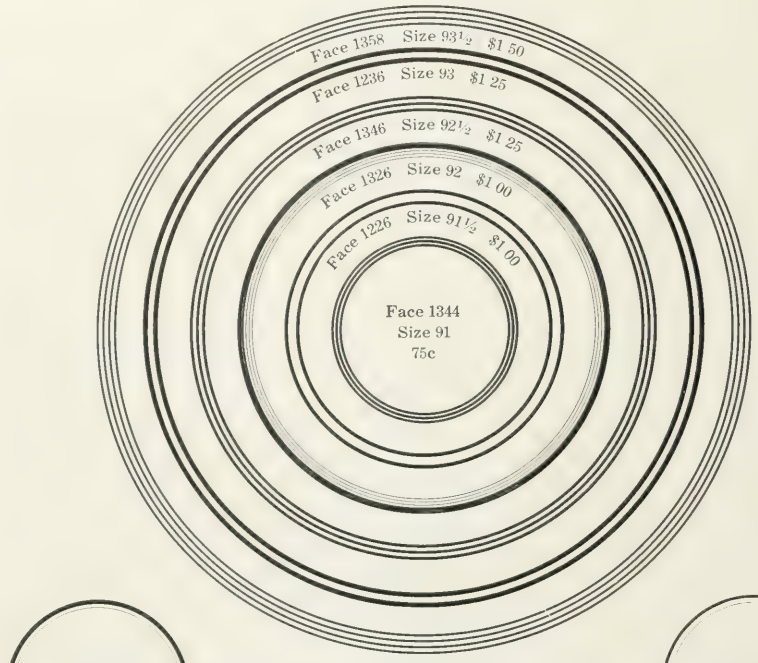
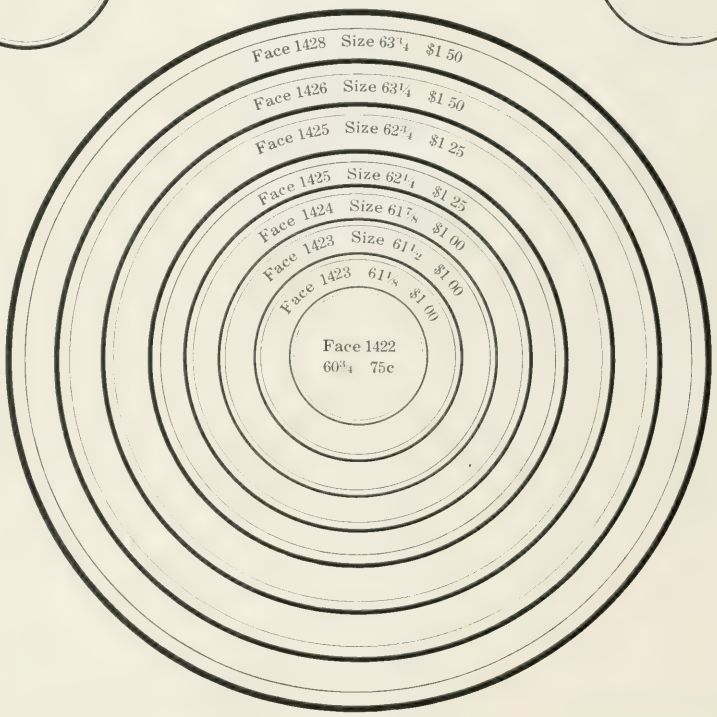
BRASS CIRCLES



Face 1433
Size 51
75c

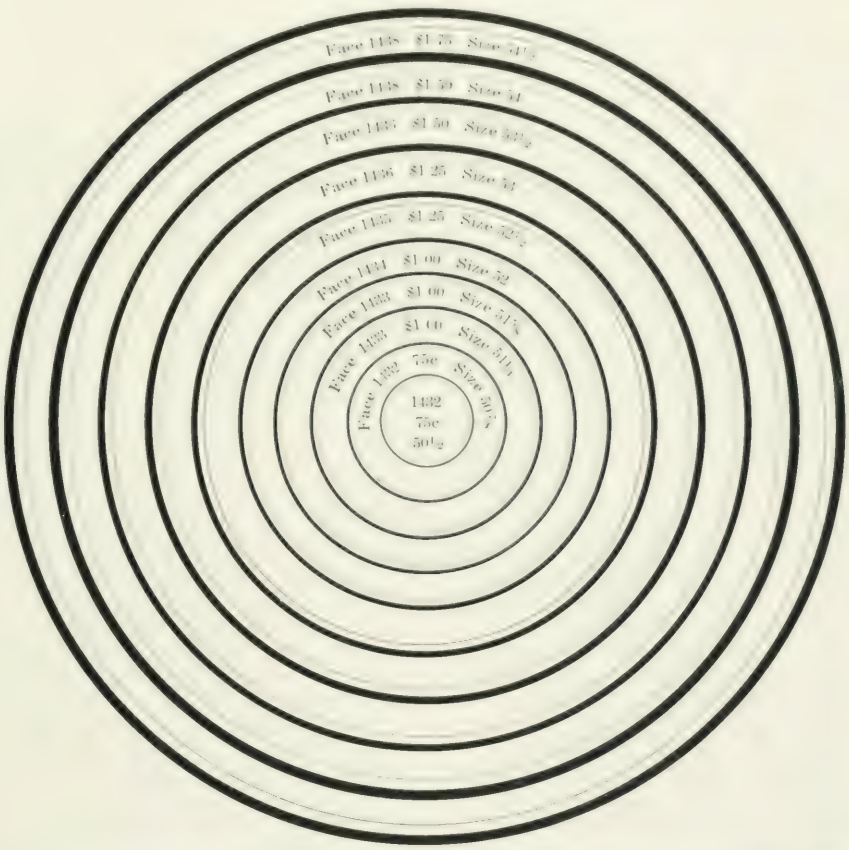
The last figure and fraction in the size number denotes the diameter of the circle in inches.

Face 1423
Size 61
75c



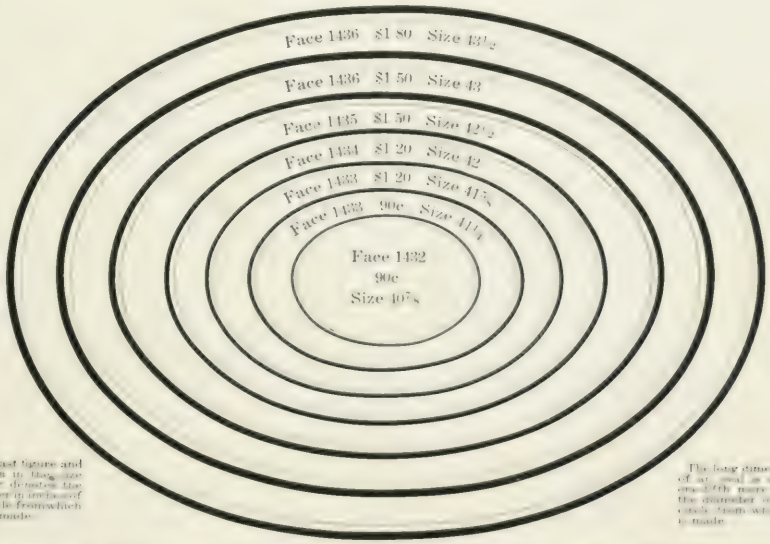
Our Brass Circles are made from seamless brass tubing and can be furnished in one-eighth inch graduations to 2 inches, and in one-quarter inch graduations to 4½ inches. Larger or intermediate sizes are brazed. Any face shown in this book can be furnished. Always give *face* and *size* when ordering.

BRASS CIRCLES



Our Brass Circles are made from seamless brass tubing and can be furnished in one-eighth inch graduations to 2 inches, and in one-quarter inch graduations to 4½ inches. Larger or intermediate sizes are brazed. Any face shown in this book can be furnished to order. Always give *face* and *size* when ordering.

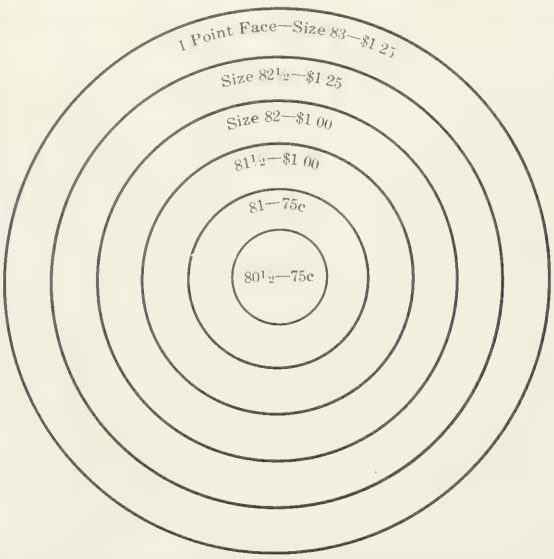
BRASS OVALS



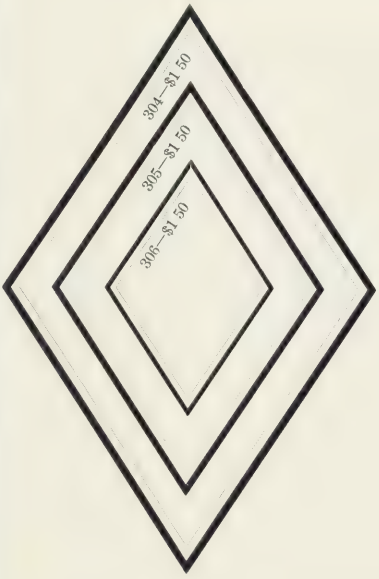
The last figure and fraction in the size number denotes the diameter in inches of the circle from which oval is made.

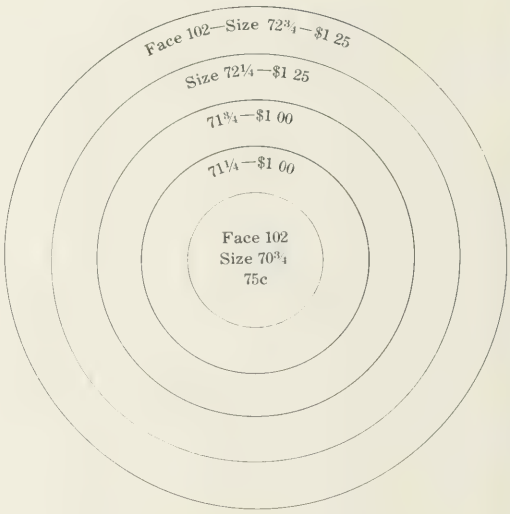
The long dimension of an oval is about one-fifth more than the diameter of the circle from which it is made.

Brass Circles and Diamonds



All ovals and diamonds, unless otherwise ordered, will be made in the proportion of 2 by 3, viz: 2 units wide by 3 units long.





Brass Circles are made from seamless brass tubing and can be furnished in ⅛-inch graduations to 2 inches, and in ¼-inch graduations to 4½ inches. Larger or intermediate sizes are brazed.

DIAMETER OR LENGTH DIAMETER OF OVALS AND LENGTH OF DIAMONDS IS FIGURED ON THE LONG WAY OF SAME	CRICLES		OVALS OR DIAMONDS

43 to 48 ems, 8 inches	2 50	3 25	3 00	4 15

Ovals and diamonds, unless otherwise ordered, will be made in the proportion of 2 by 3, viz: 2 units wide by 3 units long.

ADJUSTABLE DOTTED RULE FOR BLANK WORK

For Use With American Line Type

In blank work when large quantities of leaders are necessary it is customary in some offices to use 2 point dotted or hyphen rule justifying with leads. In 8 and 10 point the use of the 2 point rule necessitates the use of a 1 point lead at the bottom for lining the rule with the type. The 2 point side face rule for 8 point type using a 6 point slug to justify and the 4 point center face rule for 10 point type using a 6 point slug to justify saves considerable time. Other examples are also shown. For prices of strip and labor saving rule see page 1108.

Six Point

(Using regular 2 point Dotted Rule No. 1032 with two 2 point leads above rule to justify.)

Eight Point

(Using 4 point Dotted Rule No. 1034 with two 2 point leads to justify, or one 4 point lead.)

Ten Point

(Using Special 3 Point Dotted Rule No. 4033 with two 2 point leads and one 3 point lead to justify.)

Twelve Point

(Using regular 2 Point Dotted Rule No. 1032 with one 2 point lead below rule and one each 2 point lead and 6 point slug above rule.)

Six Point

(Using Special 3 Point Dotted Rule No. 4033 with one 3 point lead to justify.)

Eight Point

(Using Special 2 Point Side Face Dotted Rule No. 2032 with one 6 point slug to justify.)

Ten Point

(Using 4 Point Dotted Rule No. 1034 with one 6 point slug to justify.)

Twelve Point

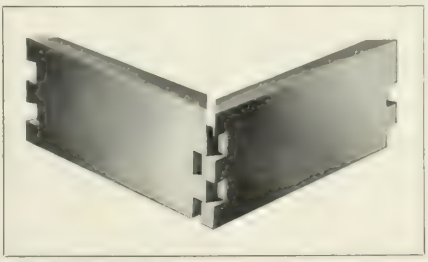
(Using Special 4 Point Dotted Rule No. 4034 with one 2 point lead below rule and one 6 point slug above rule.

WE MAKE Brass Rule to fit and work with French Cast Squares, Quadruple Cast Squares, Boston Breton Cast Squares, Cast Panel Pieces, Uniform Rule Cast Corners, etc., as shown in many uses in the display pages of this catalogue. This rule and the various cast corners are great time savers, as the printers having used them will testify.

The American has issued a beautifully printed 32-page booklet entitled "Nuggets" which shows the complete line of Cast Corners, etc., in practical use with Brass Rule. You may obtain this valuable booklet by writing for it.

INTERLOCKING MITERS FOR BRASS RULE

With regular miters care must be taken to prevent slipping at the corners which can be overcome with use of corner quads when space permits this use. The Interlocking Miter absolutely prevents slipping as the dovetails interclose holding the rules firmly in position. The use of these miters is becoming more general both for special pages and for sets of panel rule.



List Prices of Interlocking Miters

These are sold at the price per piece in Tables H and I according to length of rule used plus the following charges for mitering per page or per set of miters.

Pages	1 to 5 1-2 Pt. Per Page	6 to 12 Point Per Page	14 to 18 Point Per Page	Over 18 Pt. Per Page

Electrotyped Society Emblems

Owing to the great demand for space in this Specimen Book and its voluminous size, we have been compelled to condense the showing of Electrotyped Cuts. We are printing only a few sample pages here. In order, however, to illustrate and price our whole line, we have issued a separate pamphlet, which contains a complete showing of all the electrotypes made by us, besides several other lines of cuts of interest to printers. We shall be pleased to mail this pamphlet to any customer or interested printer on request.

In addition to the extensive line of Metal Type Faces shown in this catalogue, the American Type Founders Company announces that it can also supply on short notice, any of the designs of type, borders, ornaments, etc., shown in a special Wood Type Catalogue, which will be sent to customers on request. The Wood Type sold by the American Type Founders Company is undoubtedly the best procurable and invariably gives perfect satisfaction whenever used. We show only a few examples here. Any style can be furnished in any size desired, and in the following table we give prices for all sizes up to one hundred lines pica.

By reference to the Revised Price List and the Scale of Fonts it will be found an easy matter to determine the price of any style of Wood Type in any desired size. First determine the kind of font desired—whether caps only, or caps and figures, or caps, lower case and figures. Then determine the size of font desired, whether 3A's, 4A's or 5A's. When this is determined you will have the total number of characters in the font. See in what class the particular style is listed and find the price per letter. By multiplying the total number of pieces by the price per letter you obtain the list price.

REVISED PRICE LIST PER LETTER

The prices for all sizes of each style of type can be found in this Revised Price List. The left hand column gives size of type or lines pica. The letters L, M, N, etc., at the top of table, give the class to which the letters belong, and the figures in the different columns give the price per letter. The sizes of fonts are given on this page in the Scale of Fonts.

Always state whether CAPS alone are wanted, or CAPS and FIGURES, or CAPS, LOWER-CASE and FIGURES, or CAPS and LOWER-CASE, and how large a font or number of A's.

Wood type is priced by the letter, and sold in various sized fonts, as below. Font orders are subject to a liberal discount; small sort orders are subject to a smaller discount than is allowed on fonts. 3A cap font contains 75 letters; 3a lower-case font contains 65 letters; 4A cap font contains 106 letters; 4a lower-case font contains 90 letters; 5A cap font contains 120 letters; 5a lower-case font contains 104 letters. Figures are put up separately, 26 in each font.

Please bear in mind that End Wood Type is made in any size. A wood-type letter in exact proportion increases in width and length. Example: If a 12-line letter is 2 inches wide, the same letter in 15-line will be 2½ inches wide, the increase being ¼ each way.

All styles of Wood Type which are made can be furnished on receipt of sample at these prices, subject to liberal discount.

MACHINERY
AND SUPPLIES

This Catalogue is the most extensive and complete ever issued for the use of printers.

All the Machinery and Materials listed herein, which are in regular demand in any section of the United States, are kept in stock, and those in occasional demand can be delivered very promptly, usually from the reserve stocks in the larger Branches.

Due regard for the reputation of its own products and its leadership in the field of Printers' Supplies will not allow the American Type Founders Company to recommend anything that is not of well tested merit

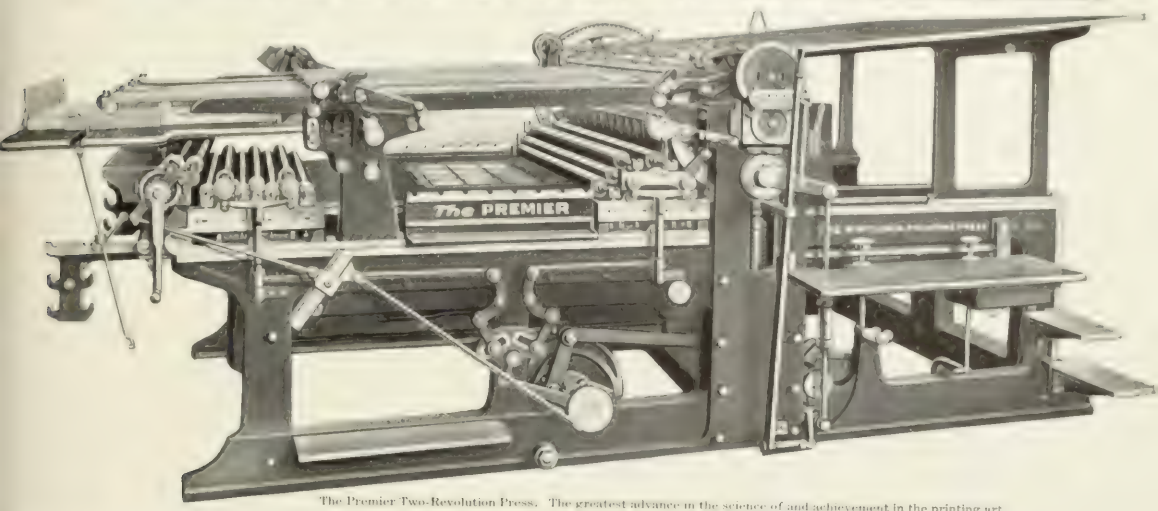
Discounts

The list prices of Printing Machinery and Supplies are subject in most cases to discounts, which will be quoted on application. The net selling prices are the lowest quoted by the various manufacturers.

American Type Founders Company

The Premier Two-Revolution Printing Press

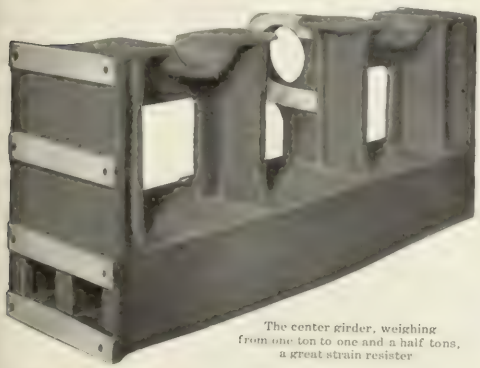
The past two decades have seen a great advance in the science and achievement of the printing art, and so urgent have been the consequent demands made on the printing press, that, while all the two-revolution presses now being built may be considered good printing machines, all of them, without exception, have failed to keep pace with the march of printing progress. The reason for this is obvious. Invention is difficult, laborious and time-taking; one cannot turn a spigot and have a novel mechanical idea come forth. Printing-press invention is very much restricted, besides, by the crisscross of claim and description with which inventors have covered their patents already allowed, so that further originality and novelty seem to be almost impossible in any of the basic features of two-revolution presses. Most of the makes of this type of printing press suffer also from the fact that the machines at



The Premier Two-Revolution Press. The greatest advance in the science of and achievement in the printing art

present built were originally designed from ten to twenty-five years ago, many of the new devices being added from time to time as the manufacturer could invent or design, retaining meanwhile all the weak, inadequate old-fashioned features for the lack of something better. There is but one two-revolution printing press in the market today of entirely new design throughout, fulfilling in every way every demand of the most exacting up-to-date printing, whose every mechanical feature and device has been tried, found successful and standardized, and that is The Premier, of which we are the selling agents.

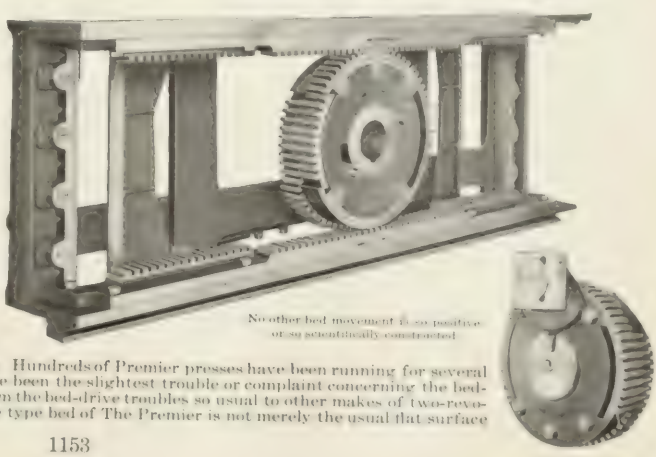
The builders of The Premier, while studying the situation, noted that, while every other two-revolution press of whatever make—the least liked as well as the most popular—possessed some particular feature of merit and value on which its reputation was based and maintained; noted too, that none of them, not even in the remotest way, filled the requirements of present-day printing conditions. They determined, therefore, to design and build a new series two-revolution, which, while original in some features, would base its greatest claim for preferment in the novel combination into one machine of all the meritorious devices and features found singly in all the other two-revolution presses, these devices when embodied in The Premier being simplified, amplified, strengthened and improved to the very fullest degree. This design has been successfully accomplished and the result, as must be plain to any thinking mind, is a two-revolution press, with the best device or feature for every operating function, all working together to effect a printing production of the highest quality in the greatest quantity with the least waste and at the lowest productive cost.



The center girder, weighing from one ton to one and a half tons, a great strain resister

A terse description of The Premier follows: The side frames are solid. On some two-revolutions the frames look solid but are merely flange frames with the flat surfaces on the outside. The greater strength of the solid frames is obvious. Heavy girders at each end join the frames together, while about midway between them and directly underneath the impression is a girder of tremendous depth and thickness, weighing in the larger sizes from a ton to a ton and a half with a strain resistance unequaled in any other two-revolution press. On these girders four bed tracks are separately bolted—not cast in one piece or spider as is the case in other makes of presses—and these tracks are made wider, thicker and therefore stronger than on other presses. Following the usual practice the tracks are steel shod—high-point carbon steel being used. The bed-track friction rollers also are made of the best steel, are wider than usual and are geared throughout their run. The frame center where the cylinder rests is almost solid throughout, there being but one aperture for the single cylinder lifting spring. This frame structure as a whole is positively unequaled in any other two-revolution press for enduring stability and strain resistance, giving the press mechanism the fullest opportunity to run at its highest speed with the least jar and consequent strain and wear.

The bed motion of The Premier is a direct shaft drive and consists of an upper and lower bed rack, at each end of which is a lateral segment cast in one piece with the racks, the teeth of the racks and segments being cut by the gear cutter in the same cut—insuring positive uniformity and accuracy. The bed-driving gear running constantly in one direction engages these racks and segments. This gear is cut away or recessed for a portion of its circumference into which recess is fitted a section of teeth or sector, which alternately recedes from or projects to the gear's circumference to engage or avoid the racks as the bed is moved to and fro by the gear. The bed-gear is not raised or lowered nor slid along the drive shaft before engaging, as on other direct drive two-revolutions, the gear being cast double-width with teeth only on the part of the gear-face which engages the rack—the other part of the gear-face being left blank—excepting where the sector is. Attached to the gear is a Lumen-bronze block with a four or five inch face, sliding in slides or shutters of Jessop steel and assisting to arrest and start the bed movement. The block is obviously better than the roll or rolls generally used—as experiment with any round object will prove. The Premier bed motion is assuredly the best extant. No other is so positive, exact, simple or enduring. It makes for absolute register, high speed, smoothness of operation and a durability and freedom from wear and breaks which no other two-revolution press even approximately equals. Hundreds of Premier presses have been running for several years now, and never, not even in one single case, has there been the slightest trouble or complaint concerning the bed-drive. We are convinced that this remarkable freedom from the bed-drive troubles so usual to other makes of two-revolution presses will continue for many years to come. The type bed of The Premier is not merely the usual flat surface



No other bed movement is so positive or so scientifically constructed

with ribbing beneath as used on all other presses, but has a bottom as well as a top; it is what is termed a box type bed. The Premier is the only press possessing this valuable feature (being patented). It has more than double the strength of the ordinary type beds. The top surface of all type beds but that of The Premier is only planed and then put into the press. But on The Premier the type bed is scraped absolutely true after it is planed. This, combined with the extreme rigidity of the box type bed, makes a great saving in the time spent in make-ready, as also prolonging the life of type and plates. Runs of hundreds of thousands of impressions from a set of plates are common enough on The Premier to allow us to say they are customary.

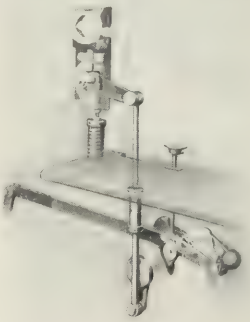
The type bed travels on the four bed tracks already mentioned. These tracks are extra wide as stated and are placed so that the two outer ones support the roll of the cylinder on the bed throughout the printing stroke. As register is gotten on all two-revolution presses by the contact of the cylinder bearers with the bed bearers after the impression segments are passed, great pressure of the cylinder on the bed is demanded. The bed tracks on almost all other makes of two-revolution presses are set too much toward the center of the bed to take up the strain of this tremendous pressure correctly, causing the bed to bow considerably, wearing type and plates and causing work-ups in the form. On The Premier the outer tracks are placed directly under the the bearers. No further comment is necessary.

The impression mechanism of the two-revolution press particularly because of the two-revolution feature of its construction is undoubtedly the *sine qua non* of the up-to-date printing machine. All other functions are made or marred and the machine as a whole is good as worthless if the impressional device is not unyielding. Some presses—even the most popularly sold—have two long rods (sometimes almost four feet long) that pass through the frames (weakening these thereby), which rods are relied on to hold the cylinder rigidly on the bearers. But they fail utterly to do so, as the rods must and do stretch, causing slur, loss of register, wear on plates and type, lost time making ready and renewing or replacing plates. The Premier has an eccentric impression mechanism covered by the span of a man's hand—no rods, no weakening of the frames. A slight turn of the eccentric raises and lowers the cylinder. It is as unyielding as the Rock of Ages. There are four air springs on The Premier—two at each end of the press to assist the bed over centers. On some presses there are but two—one at each end. If there were need to discuss the value of the four over the two air springs we would do so. We think it unnecessary.

The cylinder gear by means of a ring can be moved from one to three teeth forward permitting an increase on the type form printed of two inches or more (the type bed and cylinder impression surface being cast that much larger than the advertised size so as to take the form comfortably and correctly). This important feature is possessed by but a few of the other makes of two-revolution presses. Its value on occasions is incalculable.

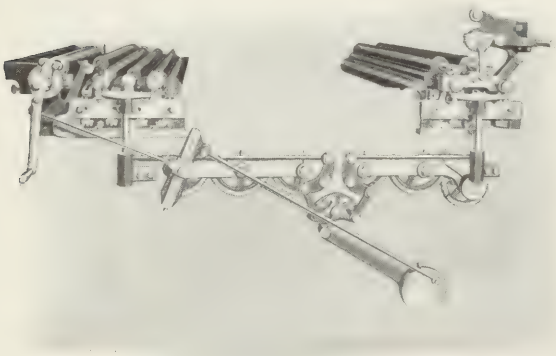
There is no outside intermediate pinion between the cylinder gear and the bed driving shaft gear, consequently the very slightest motion of the bed driving shaft is imparted uniformly to both cylinder and bed assuring more exact and enduring register by the elimination of the wear sure to come in the contact points of the intermediate pinion.

The cylinder of The Premier is unquestionably of the strongest construction possible. Almost all other two-revolution presses have printing and idle surfaces well spoked inside the cylinder, but wide gaps in the cylinder surface are left for the shoe-fly gripper and tympan rods. The Premier cylinder surface is closed-cast in that there are no openings for the rods, deep depressions being left in the cylinder surface to allow ample room for the rods and their easy manipulation. As the contact blow between the cylinder and the bed at the point of impression occurs within half an inch of the edge of the impression surface the closed-cast periphery of The Premier cylinder presents an adequate resistance with which the weakness of the open cylinder cannot be compared.



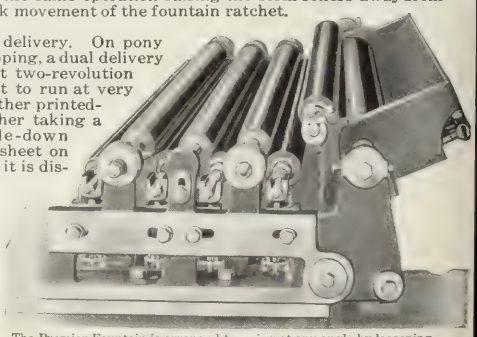
The Wonderful Eccentric Impression Mechanism--the span of a man's hand covers it.

On all two-revolution presses at the commencement of the printing stroke, the cylinder and bed are geared together up to the headline so as to travel at a uniform speed to get register. After the headline is passed, however, the sole reliance for register through the impression is the pressure contact between the bearers on the bed and cylinder. To hold this pressure more certainly and register surer, the bearers on the cylinder and bed of all Premier presses are wider than on all other two-revolution presses, size for size. The gripper mechanism on The Premier is of the most approved type, rotary in its action, strong, taking the sheet without shock and almost noiseless. A safety turn-back device throws the gripper rod back without damage should the press be started while the gripper rod is turned up. There are three tympan rods to draw and hold the make-ready and top sheets at the very highest tension.



The Unequaled Distribution: note the independent vibratory mechanism

The distribution of The Premier is immeasurably superior to that of any and all other two-revolution presses. All these latter print and have distributions which lay on the ink in more or less satisfactory manner. But none other than The Premier has the sheet and ink saving possibilities of the tipping fountain and the independent vibratory motion. The fountain on every other two-revolution press is fixedly bolted to the press frames, whereas The Premier fountain is arranged to swing at any angle merely by loosening one bolt and tightening it again. The fountain is placed above the ink plate. The ductor roller carries the ink, not to the ink table, but to the first table vibrator roller, and as the ink table is then at the other end of the press (when the press is running), the ink is cut up to some extent already when first laid on the plate. Over the table and form rollers there are three vibrators beside two top vibrators over the form roller vibrators. These form and table vibrating rollers are independent one of the other, so that while those over the form rollers may be set to vibrate a great deal, but little, or not at all, those over the table rollers can be set to vibrate as desired, whether much or little. The vibrators over the form rollers can be raised by the mere turning of a lever—the same operation raising the form rollers away from the form. There are two fountain pawls, permitting of a supplemental half nick movement of the fountain ratchet. The form and table rollers are interchangeable and gear-driven.

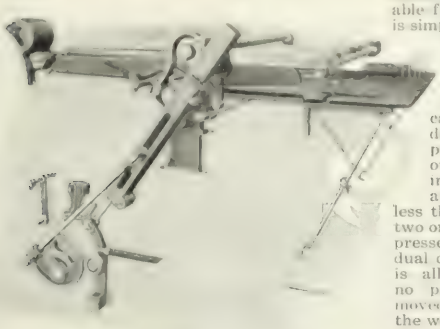


The Premier Fountain is arranged to swing at any angle by loosening one bolt and tightening it again and the fountain is placed above the plate

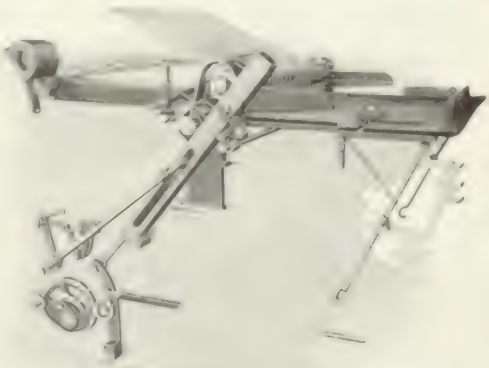
No modern four roller two-revolution press is complete without a dual delivery. On pony presses where a sheet can be flicked off the press with one hand without stopping, a dual delivery is not alone unnecessary but is oftentimes more or less of a nuisance. But two-revolution presses designed to print color or black work of very high quality or built to run at very high speed must be supplied with a delivery which can deliver the sheet either printed-side-up so as to permit of the work being critically examined without either taking a sheet from the pile or stopping the press, or fly the sheet printed-side-down at the fullest speed the press driving mechanism can operate. The printed sheet on all printed-side-up delivery presses is absolutely uncontrolled at the place it is discharged to the pile. The fly delivery, or printed-side-down, controls the sheet very much better; hence the speed of so fast a two-revolution as The Premier and one or two other makes is necessarily cut down to the ability of its delivery to take care of the sheets. If, therefore, a press is supplied with only the printed-side-up delivery it cannot in the very nature of things run as fast on some work as if supplied with the fly, while if supplied with only the fly a pressman cannot examine his sheet or adjust his color thoroughly well without stopping the press—an expensive and time wasting operation. Hence, the really modern two-revolution press must have both deliveries. Having both deliveries on the press is not all there is to it either. There is a certain popular two-revolution press possessing both, whose printed-side-up delivery can handle only good heavy stock because it uses sticks with pushers to get the printed sheet onto the pile. The Premier dual delivery will handle all sheets from tissue to board equally well, because the delivery carries the sheet directly over the pile and then rolls away from under the sheet leaving it to fall on the pile and adjust itself thereto with a fine layer of air between. This latter saves slip-sheeting on all but the very heaviest-inked cut forms. There are besides three just printed sheets exposed to the air for drying throughout the printing operation. The printed-

The Premier Two-Revolution Printing Press

side-up delivery of The Premier dual delivery has been used for years by the trade in connection with another make of press, our improvement thereon consisting in the invention of a method for applying the fly in conjunction with it. A further absolute necessity in the use of a dual delivery is that it shall be readily and simply changeable from fly to printed-side-up and vice versa. The drive of The Premier dual is simplicity itself. It consists of the usual fly cam and lever with rack teeth cut in the latter to mesh with the fly pinion, and a duplicate of this mechanism turned back to back for driving the printed-side-up delivery, a circular plate taking the place of the fly cam. The change is made by pushing a handle up or down—this handle throwing out of mesh either the fly gear from its lever or the printed-side-up delivery gear from its lever. The change can be made in from half a minute to two or three minutes and is so simply done that, once shown, a layman can do it correctly forever after. Where a press is running on badly curled sheets or on paper with broken edges and one delivery seems not to handle it as well as it might, the other can be put into use almost instantly. If there is improvement in the production, well and good. If it is not so good, the delivery can be changed over again and less than five minutes only have been lost in the effort. Compare that with the two or three hours the same effort would cost on some of the other two-revolution presses. The Premier dual delivery besides is all self-contained no parts being removed to be hung on the wall or left standing around, and the fly is used as overguides when the printed-side-up delivery is in operation and is not suspended in the air. In every feature, whether of utility, and ability, simplicity, effectiveness, ever-readiness for quick change or from any other standpoint whatever, The Premier dual delivery is undoubtedly unapproached in even the remotest way by any other dual delivery on any other two-revolution press in the world. The Premier is supplied with a brush at the bottom of the cylinder to assist the front bands to snug the sheet close so as to expel the air between the sheet and cylinder.



The Premier Printed-Side-Up Delivery



The Premier Fly Delivery

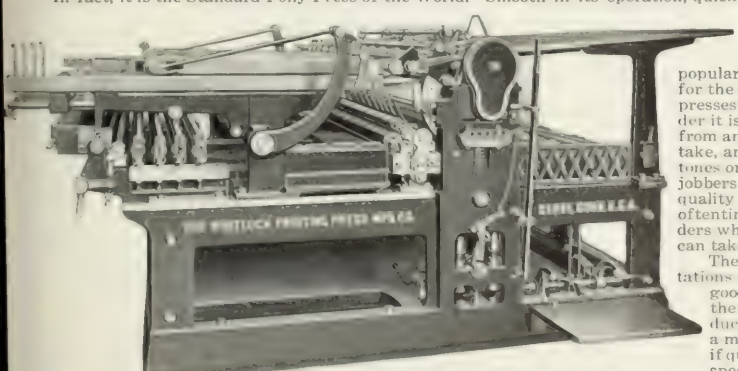
Dimensions of The Premier Two-Revolution Press

Bed Inches	Form Inches	Sheet Inches
28x41	23x37	25x38
33x45	28x41	30x42
36x48	31x44	33x46
41x52	36x48	38x50
43x56	38x52	40x54
47x66	42x62	44x64

There are both trip and back-up motions on The Premier. Some of the other two-revolution presses have the trip and a brake, but no back up. This requires another hand at the fly wheel when putting on make-ready and top sheet. The back-up is therefore a time saver. The trip does not operate, no matter if stepped on, during the printing operation, but will throw-off up to just before the head-line or after the impression-end is reached. We respectfully submit The Premier to the trade with perfect confidence that our claim for its far excelling any and every other two-revolution press in the market in any and every function of the modern printing press will be fully demonstrated on any user's floor to his perfect satisfaction if afforded the opportunity of doing so. It will make good absolutely.

The Whitlock Two-Revolution Two-Roller Pony Press

No cylinder printing press is so profitable an investment for the printer as the Whitlock Pony. Its reputation is world-wide. In fact, it is the Standard Pony Press of the World. Smooth in its operation, quick to make ready and to get the form on and the work off, with a fine distribution, even and rigid impression, exact register, easy to feed and to operate, simple and durable—all these elements have combined to make it the most popular of all the pony presses. It is as profitable for the large printing office with one hundred cylinder presses as it is for the small printer, whose only cylinder it is. Its range of work comprehends everything from an envelope to a sheet the full size the bed will take, and from the lightest form to one in which halftones or other plates abound. It displaces the larger jobbers—producing the work more quickly, of finer quality and with less work in the production, and oftentimes relieves the rush of work on large cylinders where the sheet can be split to a size that the bed can take on.



Whitlock Pony Press, with Printed-Side-Up Delivery

There are in the market to-day a half dozen imitations of the Whitlock Pony, all purporting to do as good work as it does, but all of them will disclaim the ability to run as fast or to yield as much product whether in a run of an hour, a day, a week, a month or a year. If product means profit, and if quality is not sacrificed to product, the unrivaled speed at which the Whitlock Pony operates—its unbeatable product—should make its value to the user so great as to make impossible the consideration of any of the aforementioned imitations on the part of any intending Pony press purchaser. The Whitlock Pony possesses every known device for the production of the maximum of work at a minimum expense. The following is a description of some of its features with a terse comparison of the same features as found in other makes of pony presses:

The bed motion is a simple crank movement where the bed driving gear is constantly engaged with the bed, driving it backward and forward without the tumbling around ends or the jumping up and down or the sliding in and out of the bed gear, as in other pony presses. These latter run smoothly up to a speed of two thousand or twenty-two hundred an hour when new, but at a greater speed or when slightly worn they jar badly over centers causing deviation in register, wear and trouble. The Whitlock Pony is guaranteed to run at three thousand per hour in the smaller size and twenty-six hundred per hour in the larger. It can be speeded, however, from five to ten per cent faster than this—thirty-three hundred per hour being not uncommon for the former and twenty-nine hundred for the latter. And this with exact register and without undue wear or strain. No other pony printing press can approach this wonderful operating capacity.

The type bed of the Whitlock Pony is a box type bed—with a bottom as well as sides and top. By this means a strength more than double that possessed by any other pony press type bed is gotten. It is, besides, scraped absolutely true after planing so that type forms (and most pony presses run mainly on type forms) can be made ready in much less time because of this feature.

The cylinder on the Whitlock Pony is closed cast, *i. e.*, there are no openings at the front and tail of the impression for the insertion of the gripper, shoo-fly and tympan rods as in the case of other pony presses. The cylinder of the Whitlock Pony is cast with a deep depression in place of the rod openings, allowing ample room for the comfortable accommodation of the rods. This strengthens the cylinder by over one hundred per cent, assisting to make ready quickly and prolonging the life of type and plates.

The fountain on the Whitlock Pony is the only fountain on any cylinder press not bolted fixedly to the frames of the press. It can be tipped and set at any angle so that ink cannot work away from the fountain roller, thereby permitting color to work light. By means of this tipped position all the ink is used and waste prevented.

The Whitlock Pony has both trip and back-up motions. Some of the other pony presses have either the trip or the back-up,

The Whitlock Two-Revolution Two-Roller Pony Press

but few have both. The value of both these features is inestimable. There is a heavy sole plate supporting the superstructure of the Whitlock Pony while almost all other pony presses stand upon their side frames. The sole plate imparts rigidity and takes up the thrust which other pony presses impart to the floor where they are operating. As a consequence, the Whitlock Pony can be installed and will run correctly on a floor much lighter as to strain resistance than any other pony press built. Concentrating the construction of the Whitlock Pony has made it lower, shorter and narrower than any other pony—its weight being kept well down to the sole plate, avoiding thereby that tendency to top-heaviness so noticeable in other machines and lending itself to the smoothest operation when running at highest speeds.

The Whitlock Pony will make good absolutely no matter what other pony may be put in opposition against it. It is built with front fly as shown in the preceding page or with a printed-side-up (all tapes) as shown in the two illustrations. The presses are equipped with a set of composition rollers, an extra set of stocks, hard packing for cylinder, slitter, counter, jogger, press tools and steam fixtures or motor pulley and bearing.

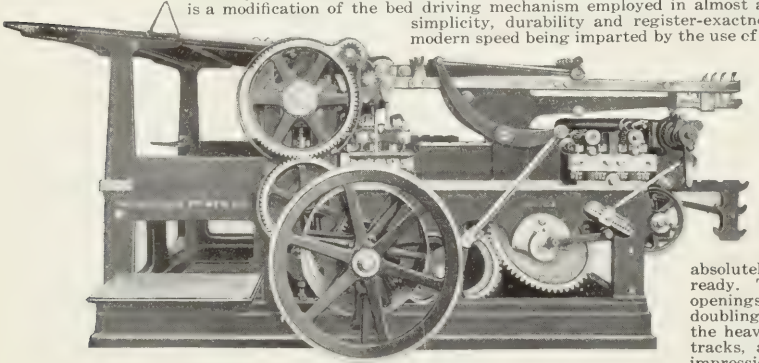
The Whitlock No. 23 Two-Revolution Three-Roller Pony Press

The Whitlock No. 23 Pony is a Three-Roller Pony, an adaption of the No. 00 Four-Roller and the No. 3 Two-Roller Ponies. It is designed to meet the needs of those printers who, not needing the very high speed the two-roller can run at, yet find unnecessary the very fine distribution of the four-roller. The bed drive is the well-known elliptical-gear crank motion, which is a modification of the bed driving mechanism employed in almost all stop cylinder and lithograph presses, the simplicity, durability and register-exactness of these machines being retained, and modern speed being imparted by the use of the speed gears.



The Whitlock Two-Revolution Three-Roller Pony Press

Four air springs, set in pairs at each end, take up the thrust of the bed. A simple device automatically adjusts them for more or less air, as speed requires. The No. 23 is built with four full length steel-faced tracks in which run more than the usual number of steel friction rollers, whose pecular shape forms a perfect preventative to any side lash of the bed, and besides which, in their travel, carry the oil so that the tracks are thoroughly lubricated. The box type bed has a bottom surface and not merely the usual cross ribbing. This fully doubles the strength of the type bed. The type bed beside is scraped absolutely true—a time saver in making type forms ready. The cylinder has its periphery closed-cast (no openings for gripper or blanket-clamp rods) thereby doubling its strength. This, with the heavy sole plate, the heavy double-arched girder, the four full length tracks, and the box type bed, contrive to make an impressional capacity unequaled by any other press. The fountain is not bolted fixedly to the frames, but may be tipped to any angle. This forces the ink down on the fountain roller thereby preventing color from working light. It also saves ink waste. All ink rollers are interchangeable, being of same diameter. Old form rollers can be used as angle rollers, thus saving roller expense. The angle rollers are geared and driven in the same direction with the moving ink plate and at the same speed by a simple rack and gear driving mechanism—avoiding the use of belts and trains of gears. The fountain ductor roller deposits the ink, not on the ink plate, but upon the first angle roller, and makes more than one complete revolution before returning to the fountain roller, thus cutting up the ink most effectively. The hinged roller frame with roller-lifting device is so finely balanced that an easy swing of a lever lifts the top riding and vibrating rollers from off the form rollers, the form rollers being lifted away from the form at the same time. The press has both trip and back-up motion. The trip cannot be broken through improper timing. The back-up operates by friction and acts instantly at highest speed without any damage to the press. The printed-side-up delivery, which lays the sheets over the fountain, is an all tape delivery already in use for many years and is exact, simple and most effective in its operation.

Bed	Type	Sheet
28x41	23x37	25x38

The Whitlock Two-Revolution Newspaper Press

This press is specially designed to do not only the finest newspaper work at the highest speed at which a flat bed press may be run, but also to be equally efficient for production of the general work of the modern printing office. Its various patented and modernized features have been in use long enough and tested severely enough on the Whitlock Four-Roller Book Press to warrant the claim that the Whitlock Newspaper Press is the swiftest, smoothest running, simplest, most durable and most efficient of all the two-revolution presses. The Whitlock Newspaper Press is built with a heavy foundation. This, with the extra heavy double-arched girder directly under the impression and the heavy girder at each end of the machine, impart a strength and solidity not possessed by any other two-revolution newspaper press. The new crank bed movement is a modification of the bed driving mechanism employed in almost all stop cylinder and lithographic presses—the simplicity, durability and register exactness of these machines being retained, and modern speed being imparted by use of the speed gears. The speed of this machine depends largely on the place of installation. If on a first-class foundation the usual speed will easily be eighteen hundred to two thousand per hour. This we guarantee. Twenty-two to twenty-three hundred per hour is not infrequent in the offices where these machines are in operation. Four air springs, set in pairs at each end, take up the thrust of the bed. A simple lever quickly adjusts them (in pairs), for more or less air, as speed or form requires. This machine is built with four full length steel-faced tracks in which run more than the usual number of steel friction rollers, whose peculiar shape forms a perfect preventative to any side lash of the bed, and besides which, in their travel, carry the oil so that the tracks are thoroughly lubricated. The box type bed has a bottom surface and not merely the usual cross ribbing. This fully doubles the strength of the type bed. It is besides scraped absolutely true—a time saver in making ready. The cylinder is much larger in diameter than is commonly used, thereby lessening considerably the wear on type and plates. Its periphery is closed-cast (no openings for grippers or blanket-clamp rod), thereby doubling its strength. This, with the heavy sole plate, the heavy double-arched girder, the four full-length tracks, and the box type bed, contrive to make an impressional capacity unequaled by any other press. Made in one size only, seven-column quarto.

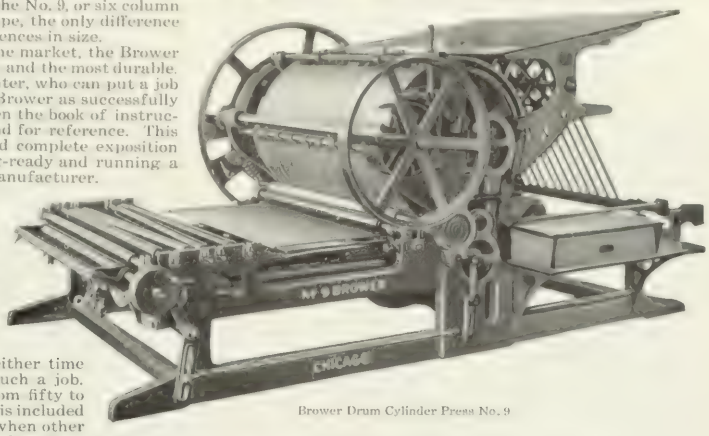
The Brower Drum Cylinder Presses

The Brower Drum Cylinder Press was first placed upon the market in January, 1906. It is, therefore, the most modern of standard drum presses. At the outset only the No. 7 size was manufactured, but the universal popularity of the machine among country publishers ultimately resulted in the bringing out of the No. 9, or six column quarto press. These two presses are of the same type, the only difference in their construction being the result of their differences in size.



Brower Drum Cylinder Press No. 9

Of all standard or one-revolution cylinders on the market, the Brower is the lightest running, the simplest in construction and the most durable. Indeed it is so easily understood and run that a printer, who can put a job on any kind of a press, quickly learns to operate a Brower as successfully as an expert pressman. This is especially true when the book of instructions, which is sent with every press, is kept at hand for reference. This booklet is an invaluable aid and is the first clear and complete exposition of the salient points of erecting, adjusting, making-ready and running a cylinder press ever published by a cylinder press manufacturer.

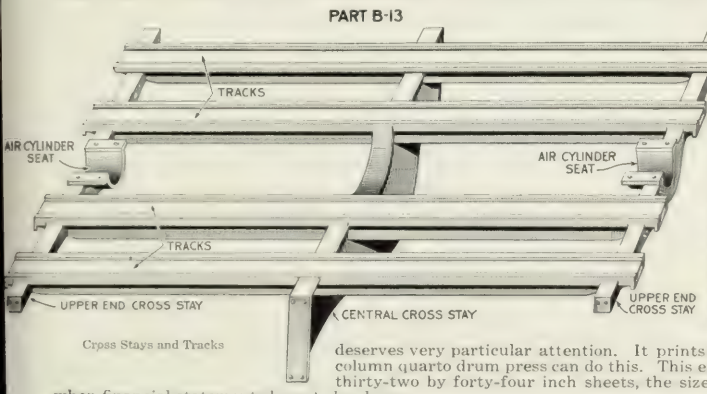
For the work of an office in which there is only one cylinder press, the Brower is without a peer, for each of the machines is fitted with table distribution and will deliver with perfect rhythm the smallest sheet usually put upon a cylinder up to the largest its capacity will take. Too much stress can not be laid upon the fact that every Brower has table distribution and at no extra cost. Where a poster or some other job requiring a special ink is desired to be run, it is necessary only to disconnect the fountain of a Brower and apply the special ink directly to the plate with knife or brayer. Neither time nor ink is wasted cleaning out the fountain to do such a job. The usual extra charge for table distribution is from fifty to one hundred dollars, but in the case of the Brower it is included in the regular price. This should be borne in mind when other drums which do not have table distribution included in their price are offered in competition with a Brower. Every Brower likewise is fitted with tapeless delivery, receding gripper studs, hinged feed board, detachable fly, adjustable chase head clamp, sheet slitter and every other valuable up-to-date convenience as befits the latest standard drum built.

Furthermore, as will be seen by reference to the cut above, every one of these machines has its fly wheel shaft placed high up, so that should the motor balk, a handle may be inserted and the run finished by hand before time and patience are expended in coaxing the motor to resume operations. No other drum built can be run by hand for they are all of too heavy draught and their fly wheel shafts are consequently placed low down. This one feature gives a confidence and degree of independence to the owner of a Brower which, if it could be expressed in figures, would exceed the cost of the machine.

There is no drum built other than the Brower which will give hair line register throughout its life. Perfect register is claimed for many competing drums, but after the newness has been worn off from these machines, they cannot give hair line register, because every one has an intermediate gear between bed and cylinder, and such a gear makes perfect register a mechanical impossibility.

Evenness and rigidity of impression are of the first importance in a cylinder press. Years of experience have shown conclusively that where a bed is more than forty inches wide, it requires more than two tracks to give unflinching rigidity of impression. Therefore the No. 7 Brower, being but thirty-eight inches wide, is provided with two tracks under the bed, while the No. 9 Brower with a bed forty-eight inches wide, is supplied with four tracks. In other words, these two machines are the only drum presses built in compliance with scientific rules envolved by long experience. Competing drums claim to have four tracks, but when these claims are investigated it will be found, in every instance, that they are untrue. Besides two tracks the larger of them have two outside stationary roller bearings, but such roller bearings are mere makeshifts and no competent mechanic will ever claim that they can perform the functions of tracks. However the addition of such roller bearings to old presses is an admission of their defects.

It goes without saying that the fewer the parts in a structure of given dimensions, the stronger and stiffer it is. Therefore in designing the Brower cylinders, wherever two or more parts could be made in one, that plan was followed. For instance, take the tracks and cross stays as shown in the cut and it will be seen that what in other machines is composed of seven different pieces, is in the No. 9 Brower only one piece. It is costly to cast and machine such a piece, but it gives one hundred per cent more stiffness and at the same time makes less weight on which freight has to be paid. In short, this system of construction produces the best machine and that is what the manufacturers of the Brower have aimed at from the start.



Cross Stays and Tracks

A word must be said about base length. The space in an office occupied by a press is really measured by the over all dimensions. Therefore as long base length gives stability, why not have the length of the base equal to that of the machine? The makers of the Brower answer this question by referring to the projecting feet at the end of each side frame as shown in the cut. The result is the Brower stays where it is put and is as free from vibration as any such machine can be.

The No. 9 Brower possesses one feature which deserves very particular attention. It prints thirty inches around the cylinder. No other six column quarto drum press can do this. This extra printing surface enables the machine to handle thirty-two by forty-four inch sheets, the size most desired for large pamphlet work, especially when financial statements have to be shown.

The books say that a bearing should be fifty per cent longer than the diameter of the shaft working in it. Many of the bearings in most of the cylinders on the market fall short of this rule and practically none of them exceed it. But in the Brower the principal bearings are more than double the diameter of the shaft and all the other bearings meet the rule with a margin on the right side. Few publishers look into technical points like this one, but they would be better off if they did. On such features of construction does the life of a machine depend. Please note this: No drum cylinder now on the market has a life equal to that of the Brower. The Browers are made on the interchangeable plan, jigs, templets and special tools being employed at every stage of manufacture.

Prices of the Brower Drum Cylinder Presses f. o. b. Factory

	No. 7	No. 9
Brower Drum Cylinder, with drop rollers fitted for hand or belt power, without springs	$650 00	$735 00
Attachment. Air Springs complete	37 50	37 50
Attachment. Screw Vibrator	37 50	37 50
Complete Press	$725 00	$810 00

The attachments when purchased subsequent to shipment of press will cost $50 each for each machine. Each press is packed in boxes, not crates, and furnished with felt blanket, sheet slitter, one set of composition rollers, one extra set of roller stocks, handle, wrenches and screw driver.

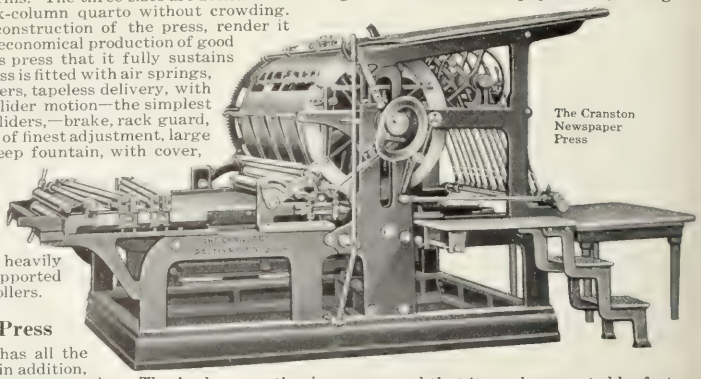
The Cranston Newspaper Press

The castings of the box frame style are solid, not only giving the press a massive appearance, but the required resistance for heavy impressions in cut work, and with full forms. The three sizes are desirable ones for general book and newspaper work, taking a six-column folio, a seven-column folio and six-column quarto without crowding. The quality of stock used, and the careful construction of the press, render it capable of the highest speed consistent with an economical production of good work. It is the experience of printers using this press that it fully sustains the points for which it is recommended. The press is fitted with air springs, with extra long cylinders and adjustable plungers, tapeless delivery, with wheels adjustable to any size sheet, simplex slider motion—the simplest device known for regulating the motion of the sliders,—brake, rack guard, iron feeder's stand, feed guides that are capable of finest adjustment, large size form rollers, register rack and segment, deep fountain, with cover, which will hold a large supply of ink, a simple adjustment for regulating the fountain roll, and rack and cam distribution. The gripper motion is smooth and noiseless in operation.



The Cranston Newspaper Press

The tracks have solid ends with oil reservoirs which prevent any leakage of oil from the ends of the track. The bed has steel runners, is heavily webbed, and on the largest size is additionally supported under the impression by two adjustable truck rollers.

The Cranston Improved Newspaper Press

The Cranston Improved Newspaper Press has all the features of the Cranston Newspaper Press, and in addition, it has a long register rack and segment and a back-up motion. The back-up motion is so arranged that it can be operated by foot pedal when the belt is on the loose pulley and the machine backed up at quarter speed. The back-up parts are all of iron and steel, and are substantially constructed on correct mechanical principles, and do not get out of repair.

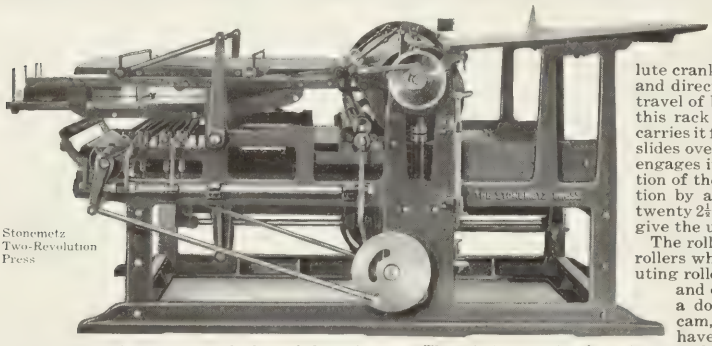
Table distribution will be furnished for either press for $100 extra.

Stonemetz Two-Revolution Press

The Stonemetz is a two-roller, two-revolution job and news press, capable of doing high-class halftone and color work. A new and excellent bed control reduces the vibration to a minimum and greatly enhances the value of this machine. Two air chambers of ample size are provided to overcome momentum, and the amount of compression in these can be adjusted without stopping the press. The bed is reversed with absolute crank motion. The driving rack is attached to and directly underneath the bed, insuring uniform travel of bed and cylinder. At the end of the stroke this rack is freed from contact with the gear which carries it forward, and while thus relieved of all strain slides over in line with the reverse gear, which then engages it and carries the bed back. At the completion of the stroke it is brought into its original position by a similar motion. The bed is supported by twenty 2½-inch steel rollers running in tracks. These give the utmost rigidity to the bed.



Stonemetz Two-Revolution Press

The roller equipment consists of two 3-inch form rollers which clear the form and four 2-inch distributing rollers set parallel with the edge of the table and oscillated in pairs in opposite directions by a double cam. The feed guides, operated by a cam, hold the sheet firmly until the grippers have engaged it, when the guides move away at a rate of speed uniform with that of the grippers. The trip is very simple and cannot be made to break the press. The fly fingers are metal, presenting a smooth curved surface to the paper. They are adjustable in all directions. Both feed and delivery boards can be adjusted or removed. The cylinder and bed are driven in absolute unison, there being only one bearing between. The cylinder is held to the impression by an eccentric thrown beyond the center, thus insuring a perfectly rigid contact.

The Diamond Cylinder Press

The Diamond Cylinder Press is the evolution of many years' experience in press building. It has been designed to meet the requirements of country newspapers for a reliable low price press to run editions up to three thousand copies. In appearance it is handsome and it is a mechanically correct machine.

The frame is substantially built, strong and compact. The machine will print any sheet up to six-column folio.

Ink distribution and impression—two very salient features in any press—are perfected in the Diamond. Ink is furnished to a ductor roller by the Challenge Book Fountain with screws conveniently placed. The ink is carried to a roller and thence to a vibrating roller resting upon the two form rollers. The latter ink the form in both directions as it travels back and forth on the bed of the press beneath the cylinder. It needs no attention after the fountain has been adjusted. The rollers can be removed quickly and easily.

The points of strain in impression are the cylinder, the bed and the bed support. The cylinder is heavy and unyielding under pressure. The journals at both ends run in anti-friction, oil retaining roller bearings. The impression can be adjusted quickly and to a nicety by simple screws and locknuts at the cylinder ends.

The bed is heavy, evenly balanced and finely machine finished. Three anti-friction steel rollers in the line of impression not only insure absolute rigidity, but make the motion free and easy.

To insure easy feeding the large varnished, white pine feed board has the right pitch. Sockets fit over supporting standards and these can be lifted off and replaced in a moment as no adjustment is necessary. The sheets are delivered by tapes of linen twine, so arranged to deliver them to a fly, which in turn delivers them printed side up, on a nicely finished white pine table. The table can be removed when not in use to save space.

Each press is furnished with felt blanket, set of cast rollers, extra set of roller cores, fly table, wrenches, oil can and screw driver. The steam power series in addition to the above, has tight and loose pulleys, shifter and fly wheel. Rubber blanket in place of felt, $4.00 additional. Felt blanket complete with trimmings, $20.00. Rubber blanket, complete, with trimmings $30.00. Steam power attachments (for hand power presses), $70.00.

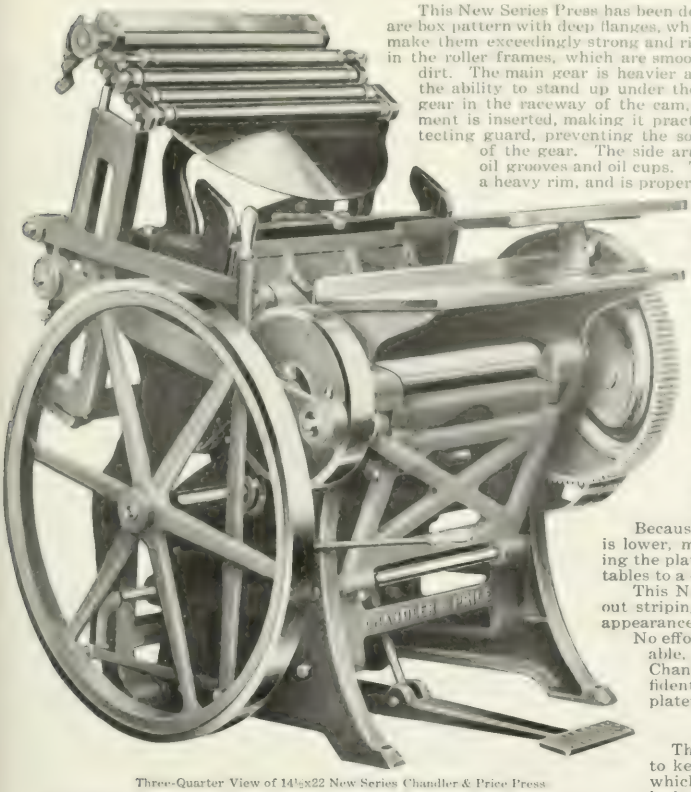
The Chandler & Price New Series Presses

In bringing out this new and improved design of the Chandler & Price Gordon Press the endeavor has been to attain an advanced style of construction without changing any of the fundamental principles of the Gordon type of platen press, invented by George P. Gordon, and perfected by The Chandler & Price Company.



Three-Quarter View of 14½x22 New Series Chandler & Price Press

This New Series Press has been designed along approved scientific lines. The frames are box pattern with deep flanges, which, together with the proper distribution of metal, make them exceedingly strong and rigid. The roller saddle rods and springs are enclosed in the roller frames, which are smooth outside and have no projection to catch and hold dirt. The main gear is heavier and has a broader face, insuring a longer life and the ability to stand up under the heaviest strain of fine type printing. Inside the gear in the raceway of the cam, where the wear is greatest, a hardened steel segment is inserted, making it practically non-wearable. The gear is covered by a protecting guard, preventing the soiling of paper by accidental contact with the top of the gear. The side arms are of steel, forged flat, and are provided with oil grooves and oil cups. The fly wheel is smaller, has straight spokes and a heavy rim, and is properly proportioned to give the best balance. The shafts are large, made of steel, and are ground true, thus reducing friction to its lowest point and insuring smooth, quiet running. All parts of the New Series Presses are accurately made to standard gauges and are interchangeable with proper adjustment.

The essentials of a perfect impression are weight and power with correct balance and adjustment. The new gear and crank wheel, steel crank pins, forged side arms and massive steel shafts combine to produce a powerful, rigid, even impression with absolute register, yet so finely balanced and so accurately adjusted is this great weight that the impact does not cause undue wear of type and cuts.

Improved inking is provided by the new metal riding roller which vibrates above the form rollers, adding lateral distribution to the rotary distribution of the disc. This simple device can be placed in position or removed as easily as an ordinary form roller, and is very effective where exceptional distribution is required.

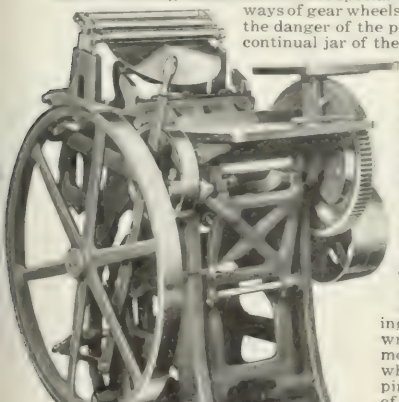
Because of its compact construction, the New Series Press is lower, making the form and rollers more accessible, bringing the platen within easy reach for make-ready and the feed tables to a convenient height for rapid feeding.

This New Series Press is painted a dark steel color, without striping or other ornamentation, giving it a distinctive appearance and making it easy to keep clean.

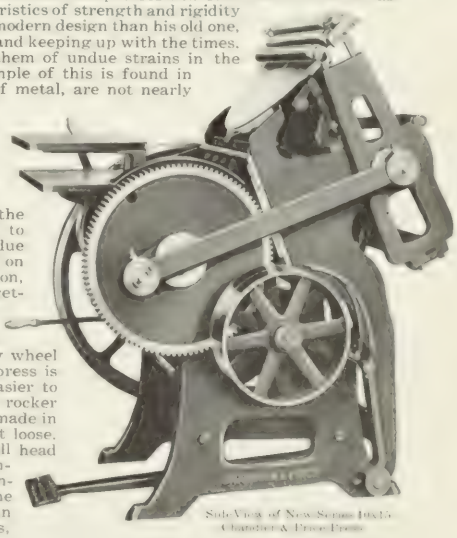
No effort has been spared to build a compact, rigid, durable, serviceable printing machine, and this New Series Chandler & Price Gordon Press is presented with the confident assurance that it possesses the highest degree of platen press efficiency yet attained.

Other Advantages

The appearance is more modern, and the press is easier to keep clean because there are fewer projections on which dirt, oil or ink can lodge. The metals used have had very particular attention. A variety of metals are utilized most suited to the various parts with the best materials in every case. The design is distinctive and comports in appearance with the Chandler & Price Paper Cutters. The modern design of these paper cutters and new presses will soon become known as The Chandler & Price style. They have an individuality all their own and characteristics of strength and rigidity which make them absolutely distinctive. When a printer buys a new press of more modern design than his old one, he is impressed with the fact that the manufacturers are improving their product and keeping up with the times. The distribution of metal and the parts are more symmetrical, thus relieving them of undue strains in the cooling of the castings. This is most noticeable in the separator. A further example of this is found in the side frames, which by reason of their better shape and better distribution of metal, are not nearly as liable to breakage from the rough handling incident to export shipment. Also the roller arm lug on the left side frame is better braced, and not as liable to breakage as in the old style press. Gears run smoother and wear longer, because the depth of the raceway is greater than on any other press and the surfaces are finished with the greatest care. Three special machines are used to complete the raceways of gear wheels. The feed tables set level, which avoids the danger of the paper piled thereon being spilled by the continual jar of the press while printing. The bottoms of the feet are milled, which allow the press to stand level, thus avoiding any undue strains incident to the press standing on three legs. It also lessens the vibration, and there is less danger of the press getting out of alignment. The rocker box caps and the crank shaft box are interchangeable, and the crank shaft has a longer bearing in the journals. The fly wheel is smaller and less in the way. The press is lower and easier to feed. Also it is easier to put in and take out the forms. The rocker shaft is larger in diameter, and being made in one piece with the rocker, it cannot get loose. The large gear cam wheel and the small head and lock cam are both thicker, which insures a more rigid impression. Thickening of these parts does away with the wrist pin collars and gives the wrist pin more support. The side arms have oil cups, which insure better lubrication of the wrist pins. The large gear cam wheel is equipped with hardened steel segment. The diameters of the discs of the Chandler & Price New Series Presses are as follows: 8x12 press, thirteen and three-quarter inches; 10x15 press, seventeen and one-quarter inches; 12x18 press, twenty and five-sixteenths inches; 14½x22 press, twenty-four and one-quarter inches.



Three-Quarter View of an 8x12 New Series Chandler & Price Press



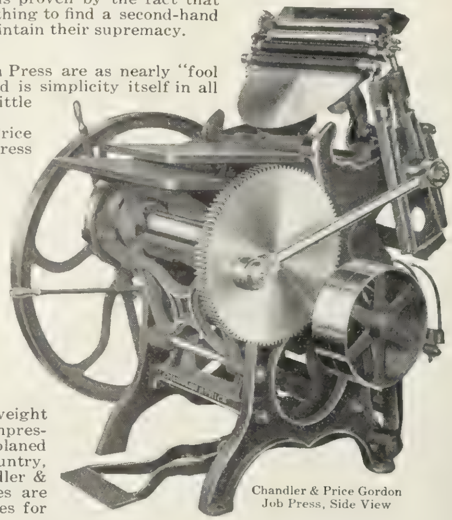
Side View of New Series 10x15 Chandler & Price Press

The height of the upper and lower tables are: 8x12 press, upper table, thirty-nine and three-quarter inches, lower table, thirty-four inches; 10x15 press, upper table, forty and five-eighths inches, lower table, thirty-five and one-quarter inches; 12x18 press, upper table, forty and one-quarter inches, lower table, thirty-six and one-half inches; 14½x22 press, upper table, forty-one and one-half inches, lower table, thirty-six inches.

The roller trucks regularly furnished are: with the 8x12 press, one and three-eighths inches in diameter; with the 10x15 press, one and five-eighths inches in diameter, and with the 12x18 and the 14½x22 presses, one and seven-eighths inches in diameter. Trucks can be furnished for each press, either one-sixteenth inch or one-eighth inch oversize, or one-sixteenth inch or one-eighth inch undersize, as desired. The following are the dimensions of the presses when boxed: 8x12 press, 38x40x54 inches; 10x15 press, 46x49x61 inches; 12x18 press, 42x52x63 inches; 14½x22 press, 46x56x67 inches. The following extras are recommended: Side Power Fixtures, Buckeye Fountain, C. & P. Fountain and Vibrating Distributer. We can supply Steel Skeleton Chase and Spider Chase, full description of which can be found elsewhere. The prices of these extras are listed under their respective headings in this catalogue.

Chandler & Price Gordon Job Press

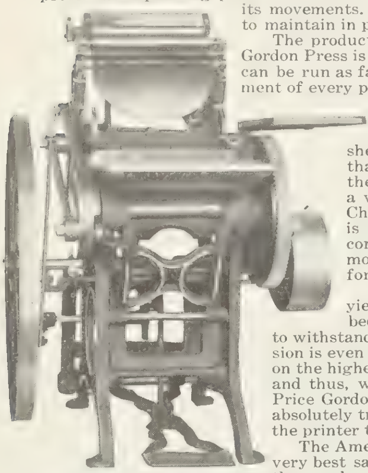
The foundations of a majority of the successes made in the printing business, during the past twenty years, were laid with the profits made upon Chandler & Price Gordon Presses. Although the first of these machines were built in 1886, most of them are still in use, as printers do not part with them except to buy new. This is proven by the fact that though nearly forty thousand of these machines are in use, it is an unusual thing to find a second-hand Chandler & Price Press offered for sale, they being so well built they still maintain their supremacy.



Chandler & Price Gordon Job Press, Side View

The Design and Mechanical Principles

The design and mechanical principles of the Chandler & Price Gordon Press are as nearly "fool proof" as a printing press can be made. It has no complicated parts, and is simplicity itself in all its movements. It requires few repairs and costs little to maintain in perfect condition.



Chandler & Price Gordon Job Press Front View

The product to be obtained from a Chandler & Price Gordon Press is a purely personal equation. The press can be run as fast as it can be fed. Every movement of every part is as brief as its duty permits, but the platen is in rest during the time the sheet is being fed, enabling the feeder to place the sheet more quickly and accurately than is possible on presses on which the bed is constantly in motion or has a very brief "dwell" or rest. On the Chandler & Price Gordon Presses it is easier to feed, as the feeder is not confused or retarded by unnecessary movements of the platen while the form is being inked.

The impression is decisive, unyielding, because of the rigidity of bed and platen, procured by sufficient weight to withstand even extraordinary strains. The impression is even because the bed and the platen are planed on the highest grade machines made in any country, and thus, when the bed and platen of a Chandler & Price Gordon Press are finished, these surfaces are absolutely true, so that there are no inaccuracies for the printer to overcome in his make-ready.

The American Type Founders Company has sold thousands of these presses and all have given the very best satisfaction. We shall be pleased to give you any additional information required regarding these splendid presses. A beautifully printed pamphlet describing and illustrating the Chandler & Price line of machines will be sent upon request.

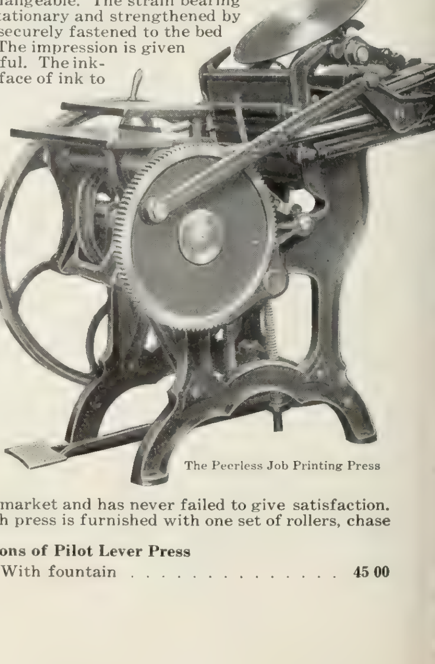
No allowance can be made for the omission of or return of the regular complement of Chases or Treadles. Neither can it be permitted to return Fountains or Steam Fixtures ordered for any size machine.

The Peerless Job Printing Press

Thousands of Printers are familiar with the mechanical construction of the Peerless Press for its worth has been fully proven, but for those who have not had an opportunity of fully investigating its merits the following details are given.

The Peerless is so constructed that every motion is positive. There are no adjustments, so it is impossible for even the most inexperienced person to put it out of order. All parts are interchangeable. The strain bearing parts are of steel and made heavy, thus insuring great strength. The bed is stationary and strengthened by lateral and transverse webs, which prevent springing. The chase is instantly and securely fastened to the bed by a substantial hook. It is accurately fitted and can be inserted either side up. The impression is given by a toggle, applied behind the platen-yoke. This motion is very simple and powerful. The ink-disc makes five-seventeenths of a complete revolution, thus exposing a fresh surface of ink to the rollers and form at every impression. It ensures a proper ink distribution. The rollers are three in number and cover a full form. The roller carriage is of original design, by means of which the rollers are securely fastened thus avoiding all chance of accident by the rollers dropping out. The throw-off is an eccentric, operated by a lever, which locks itself in either position. The grippers are of spring steel, and can be instantly lowered or raised for the purpose of setting. All impression screws are in sight and easy to reach. The gear-wheel is placed below the feeding level—a very important advantage. The pinion is protected by a gear-guard.



The Peerless Job Printing Press

Each press is furnished with three cast iron chases, two sets (six) roller cores, two sets (twelve) roller bearers, a six inch brayer, with core and wrenches. The following are optional: roller mould or casting, one set of rollers and brayer, or two extra chases.

The regular power fixtures consist of a pair of special tight and loose pulleys. If desired the spider for electric drive may be supplied. The Peerless long or hinged well fountain will be found desirable when larger capacity than that of the pony is required.

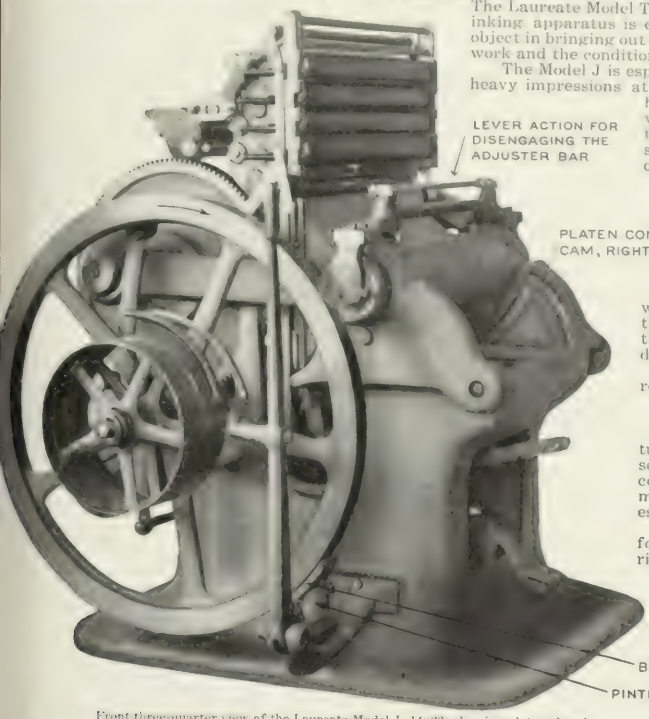
The Laureate Platen Printing Presses

The merits of the excellent line of machines manufactured by the John Thomson Press Company are so well known that comment is almost unnecessary. The American Type Founders Company, however, desires to improve upon its customers, who have never used any machines of this manufacture, that each press described in the pages devoted to this style of machine, "Laureate" is a class by itself. When an extra heavy printing press is required, there is no other machine manufactured that can so satisfactorily do the work. From those printers whom we have supplied in the past we have received many flattering words of commendation and praise. The new Laureate Presses described on this page represent the very last word in platen printing presses of their type, and will prove exceptionally popular with printers who appreciate machinery of the highest merit. Very much more could be said in favor of the Laureate Model, which would be of interest to the printer, but the limited space at our disposal will not permit it. We shall be pleased, however, to send an illustrated catalogue fully describing these and other presses to any one interested. A copy of this catalogue should be in the hands of every printer having use for a machine of this class.

The Laureate Platen Printing Presses, Models J and T

The Laureate is an entirely new four-roller platen printing press. No expense or effort has been spared to produce a machine of the highest grade attainable by modern appliances and methods. It is built only in the Half Super Royal size, but in two models. The Laureate Model T press has a single fly wheel, main gear and pinion. Its inking apparatus is exactly the same as that of Model J, and the dominant object in bringing out the Model T was to reduce its price when the character of work and the conditions are such that it will serve the purchaser satisfactorily.

The Model J is especially intended for work of a character requiring very heavy impressions at speeds of from one thousand to fourteen hundred per hour. While Model T is particularly adapted for work which can be run at a high rate of speed, say from fourteen hundred to eighteen hundred impressions an hour, so far as mere speed is concerned one model may be operated as rapidly as the other.



Front three-quarter view of the Laureate Model J, 14x22, showing platen closed

The particular function of either of the Laureates is for printing halftones, multiple color plates, tint blocks and combinations of cuts, borders and type, and of a size and character generally done on cylinder presses. They can also be used on thick and stiff cardboard signs, or any class of work requiring the very best results.

The rigidity of the bed and platen, and the accuracy with which the platen slides squarely to the form, is such that, with cuts accurately backed to "type-high," very thin and hard tympans may be used; and, under the conditions named, the make-ready is more or less automatic.

The inking facilities are perfection at a down and up reciprocation of the carriage.

There are three distinct methods of form inking.

First. Four inking rollers pass over the form twice.

Second. The upper and third rollers are substituted by tubular steel changers, these riding, by gravity, upon the second and third form rollers. The changer action proceeds continuously across the form, giving the thinnest, most uniform and perfect deposit of ink imaginable, especially effective in halftone and multiple color work.

Third. By attaching the single inking latch, either the four form rollers, or the two form rollers and the two riding changers will be forced away from the form at the termination of the down movement and will be so maintained until the latch, when the carriage is nearing the upper termination of its movement, is disconnected. This is peculiarly effective with solid tint blocks requiring special quick-drying inks.

All shafts and pins are of high carbon or special steels, ground to precise gauge dimensions, and all bearings are reamed to definite diameters.

The movement of the platen has been likened to "oil on water." It is faultlessly controlled and permits of rapid feeding. The Laureate Platen Printing Machines have been in process of development for several years and the completed machine has been subjected to the most exacting service test for many months. The organization of the novel movements involved in its construction caused great difficulty, but the ultimate result, mechanically, is a system of peculiar effectiveness, because of its simplicity. No expense or effort has been spared to produce a mechanism of the highest grade attainable by modern appliances and methods.

General Observation of the Laureate Platen Printing Presses

Shifts from one color to another can be made very quickly. A mere nominal time is required to recharge the inking system. The distribution, as a system, cannot be equaled on any press. It will print a visiting card as a tint block, because of its four roller combinations. The frame and bed are of solid self-contained type, more massive and rigid than hitherto constructed and the main shaft bearing is solid. The fountain cylinder, the ductor roller and the changer sleeve equal the length of the distributing rollers.

The distributing changer is of the enclosed thread type, whereby a considerable charge of oil is contained within the sleeve. The "crescent" or switch, passes through the oil at each revolution; hence the lubrication is continuous. It is believed, that as a system, the distribution cannot be equaled on any press of any kind, either platen or cylinder.

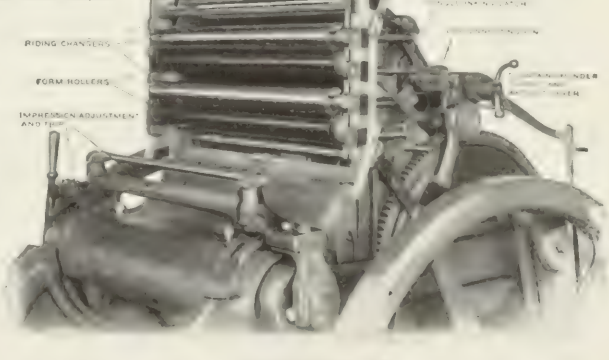
The following roller combinations are available: One form and one distributing roller. In this combination the lateral distribution afforded by the main ink cylinder is ample for a short run card job. Two form and one or two distributer rollers and the changer. Next, three form and two distributer rollers with or without the changer. And lastly, the full complement, that is four form and four distributer rollers, with or without the changer, and with or without the ductor roller, and with or without the fountain.

The crank pins and platen trunnions are provided with oil reservoirs, the oil being readily introduced from the ends.

Please note that the fly wheels on all Colt's Armory and Laureate presses should always run toward the feeder.

In the construction of these presses an effort has been made to avoid the employment of curlicue lines, sharp intersections between angles, a general appearance of harshness and yet to maintain everything that tends to simplicity in the details and to a harmonious result in the aggregate. Many arbitrary conditions forced the construction of certain members of the Laureate Presses in a somewhat different manner than would have been preferred, but it is hoped that their appearance on the whole will be appreciated.

Finally, the Laureate was designed to make it possible to profitably produce a grade of printing of the highest class.



Laureate Models J and T
Detailed view from the front and right-hand side. This shows the carriage when provided with the two riding changers, and also the latch for causing all the form rollers to pass, during the up-movement, free of the form. The inking apparatus is the same in both models.

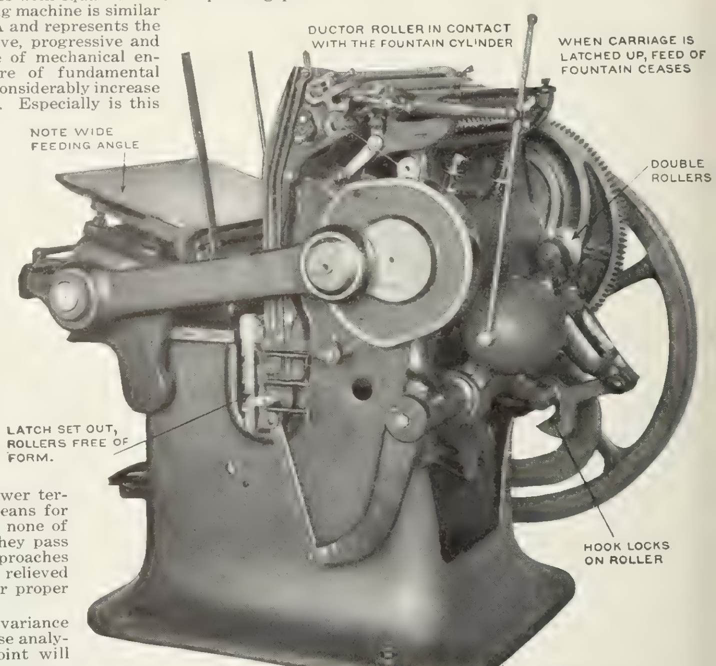
For list prices and important data see next page.

Colt's Armory Press, Style B

The new Style B Colt's Armory Presses (a detailed illustration of the 5-B being shown below) possess many new and distinctive features which are of vital importance to users. Limited space prevents our giving more than passing details. A well-printed catalogue, accurately describing and illustrating these machines, will be cheerfully sent to those interested.

The effectiveness of the man behind the gun would be absolutely nullified were it not for the excellence of the mechanism which he uses and directs. This axiom applies with equal force to the printing press.

The Style B, Colt's Armory platen printing machine is similar to the well-known and popular earlier Style A and represents the embodiment of some thirty years of cumulative, progressive and successful experience in this particular line of mechanical engineering. Although the improvements are of fundamental simplicity, their practical effect is such as to considerably increase both the quality and quantity of the product. Especially is this so in regard to modern halftone multiple color and tint block printing.



Detail Cut of Colt's Armory Style 5-B

The improvements relate entirely to the inking apparatus. The ink fountain has been elevated and set back so that the ductor roller deposits its ink directly upon the changer. Hence the fresh ink from the fountain is immediately distributed; is again passed to the two distributing rollers and redistributed, the finishing touch being imparted by the reciprocating action of the main cylinder.

The vibrator frame is provided with an adjustment for taking up shrinkage of the composition and utilizing either light or heavy contact on the fountain cylinder.

Thus streaky ink can neither reach the cylinder nor be imparted to the form rollers.

When the carriage is latched up, which is done at will, the feed of the fountain automatically ceases. Consequently when the form rollers are again put in action, the delivery of ink to the form is precisely the same as before.

The carriage after it has passed to the lower termination of its movement, is provided with means for latching out all of the form rollers, whereby none of the rollers make contact upon the form as they pass back upwardly. Then when the carriage approaches the cylinders the latches are automatically relieved and the form roller boxes snap back into their proper position for re-inking.

This feature of single rolling is quite at variance with the views usually entertained; but a close analysis of the matter from the present view-point will show that several previous assumptions were erroneous. The fact remains, however, that the results speak for themselves, and it has been proven that this feature insures even and efficient distribution, free from streaking on large and solid surfaces.

The 2-B's are of the lightest construction, but are very sturdy machines and are amply strong and rigid.

The 5-B's are particularly intended for extra hard and heavy halftones multiple color, tint block and mixed form printing. They will stand about fifty per cent more pressure at the platen than the 2-B presses.

We Recommend for Speed of Operation, Style B, as Follows

In the Quarto, twenty-four hundred impressions an hour is frequently realized. In the Half Medium and Half Super Royal, eighteen hundred. As between the 2-B and 5, or 6-B relative merely to the speed no difference need be observed.

All main shafts, pinion shafts, crank pins and cylinders are ground on live centers, thereby producing a faultless surfacing and practically true and uniform dimensions. All steel connections are hardened and ground. Babbited bearings are hammered and then bored. Bronze bearing sleeves and bushings are bronze, copper and tin. Chases are made from cold drawn semi-mild steel bars, milled to interlock.

The parts included with each Style B Press are as follows: Six form roller stocks; four distributer stocks; two vibrator stocks; four distributer stock boxes; four adjusting clamps; six form-roller wheels, one and fifteen-sixteenths inches in diameter; six form roller wheels, one and seven-eighths inches in diameter; five steel chases, interlocked; two feed tables; two feed-table floor standards; three frisket fingers; one treadle (for Quarto only); three wrenches. With Style 6, one and one-eighth inch steel plate.

All John Thompson and Colt's Armory Presses are sold f. o. b. the factory.

The above prices are f. o. b. factory, at Long Island City, N. Y., and include ink fountain, pulleys, belt shifter fork, hand lever, brake and supporting bracket; also boxing and delivering to railroad or steamer.

Double inking device for the regular Colt's Armory Printing Press, **$15.00.** Steam or gas blank for Style 6-A and Model J Presses, **$100.00** net. Riding form roller changers for Models J and T, **$7.50** each. If the fountain is not wanted, deduct **$20.00** list for the Quarto and **$25.00** for the larger sizes; also for power fixtures deduct **$15.00** in any of the sizes. Gas blank with blower for Styles 6 and Model J, **$100.00.** Blower to be used in connection with gas blank for Style 6-A Presses, **$25.00.**

Prices on gauges for book cover or wood printing for Style 6-A press will be quoted on request.

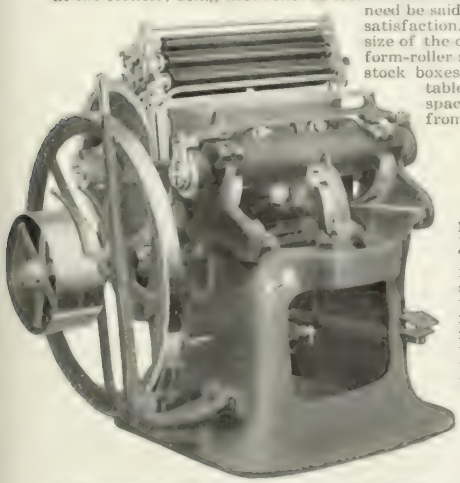
Colt's Armory Printing Presses

The Colt's Armory Half Medium and Half Super Royal in the Style 2-A construction are high-speed presses equal to the average requirements of high-class printers for all letter press and halftone printing.

Colt's Armory Printing Press, Half Medium, Style 2-A

In the 2-A Style the platen may be adjusted forward or backward by means of impression bolts: the heads of outside jack-bolts, at the corners, being first relieved from contact if the platen is to be drawn from the bed. This, however, is rarely necessary. Little need be said about these machines, as thousands of them are in use and giving the greatest satisfaction. The Half Medium Style 2-A has a heavy frame made from new patterns. The size of the chase inside is thirteen by nineteen inches. The following parts are included: Six form-roller stocks, four distributer stocks, two vibrator stocks, one changer, four distributer stock boxes, four adjusting clamps, twelve form-roller wheels, five steel chases, two feed tables, two feed-table floor standards, three frisket fingers and three wrenches. Floor space of table base, thirteen and one-half by thirteen and one-half inches. Distance from center of pinion shaft to floor, nineteen inches.

For list price and dimensions of machine see table on page 1162

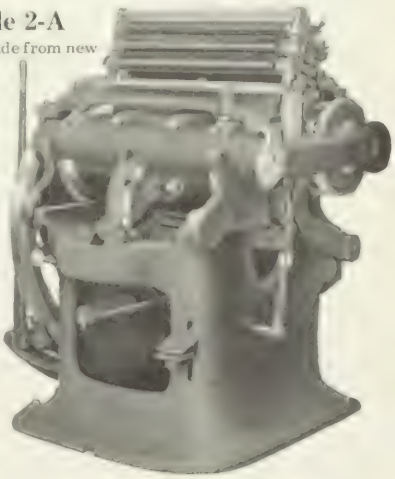


Colt's Armory, Style 2-A. Made in two sizes: Half Medium, 13x19 inches, and Half Super Royal, 14x22 inches (inside chase measurements).

Half Super Royal, Style 2-A

This press also has heavy frame made from new patterns. Its size is fourteen by twenty-two inches inside of chase. The following parts are included: Six form roller stocks, four distributer stocks, four distributer stock boxes, two vibrator stocks, one changer, four adjusting clamps, twelve form rollers, five steel chases, two feed tables, two feed-table standards, three frisket fingers and three wrenches. Floor space of table base, thirteen and one-half by thirteen and one-half inches. Distance from center of pinion shaft to floor, nineteen inches. This is a high-speed press and is equal to the average requirements of high-class printers.

For list price and dimensions of machine see table on page 1162



Colt's Armory, Style 6-A. Half Medium, 13x19 inches inside of chase.

Colt's Armory Printing Press, Style 6-A

The Colt's Armory Half Medium Style 6-A Press is adapted for nearly all kinds of work that can be done on the Styles 2 and 5, and also for certain classes of embossing, book cover stamping, printing on wood, cutting and scoring, and the like, hot or cold. Made in two sizes, Half Medium and Half Super Royal. This press is made with heavy frame from new patterns, size thirteen by nineteen inches inside of chase. Gauges for book cover or wood printing are charged for extra, price depending upon the requirements. The following parts are included: Six form roller stocks, four distributer stocks, two vibrator stocks, one changer, four distributer stock boxes, four adjusting clamps, twelve form-roller wheels, five steel chases, two feed tables, two feed-table floor standards, three frisket fingers, two wrenches and one one-eighth inch steel plate. Floor space of table base, thirteen and one-half by thirteen and one-half inches. Distance from center of pinion shaft to floor, nineteen inches.

For list price and dimensions of above machines see table on page 1162

Gally Universal Embossing Press

The Gally Universal Embossing Press is a combination of strength, power, speed and facility, and the illustration affords a good idea of its massiveness and strain bearing qualities. On this press the impression is obtained by means of a rocking and sliding platen held at the point of impression by lugs, to which is added a steel gibbed lock at the front of the platen and in the line of the face of the embossing dies. This lock holds the platen in position and exact register for the dies and effectually prevents the bridge from raising from its seat and the platen from tilting in either direction. This device is a new patented feature of the Gally Embossing Press, is of great value, and is used exclusively on the Gally presses. This principle permits of developing for the purpose practically unlimited strength and power. The largest press made can be run at eighteen hundred perfect impressions per hour. The platen is set low, is easy to feed to and is under absolute control by means of the instantaneous impression throw-off and impression adjuster. The presses are guaranteed not to stall on the heaviest work. Steel sections are welded into the wide double gears at the point in the periphery where impression is sustained. The main shaft is made of five and one-quarter inch steel with solid reamed bearing through the bed. The driving shaft, which is of two and one-quarter inch steel, runs in a series of six bearings and there is an end floor support to each extremity of the shaft. The platen bridge shaft is of three and one-eighth inch steel. There are six hundred pounds of iron in the rims of the two fly wheels, which revolve five and one-quarter times to each impression. The driving and loose pulleys are sixteen inches in diameter and are intended to carry a three and three-quarter inch belt. The platens of the press are usually set to the height of type. For cold process work, the dies, if blocked type high, may be locked in chases. For hot process work, a steam blank or a gas blank and a steel die plate are used, and the platen blank is removed to provide space for the dies. One steel plate to hold the dies, with screws and dowel pins, will be supplied with each steam blank, or gas blank, without extra charge.

Gally Cutting and Creasing Presses

The Gally Cutting and Creasing Presses are of great power and strength, and are unequaled for their speed and facility of operation. Although these machines are extremely powerful they are easily handled for cutting and creasing. Each has the improved platen movement, is remarkably simple in operation, and its solidity of construction insures lasting qualities. Write for fuller details and net prices.

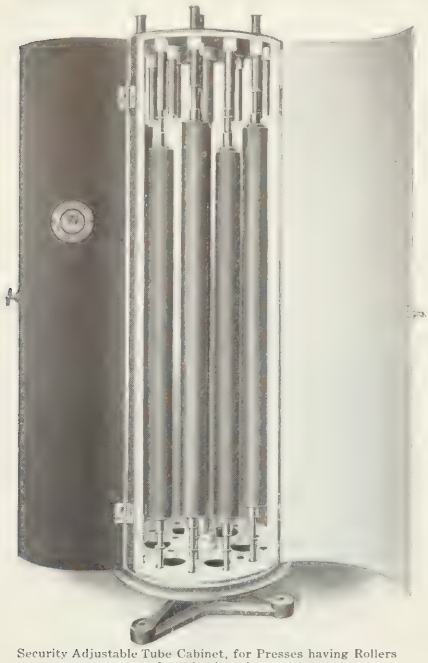
Security Roller Cabinets

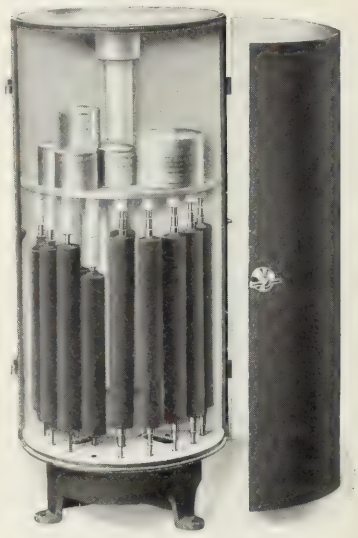
Economy and efficiency in all departments of a printing establishment are essential in these days of increased expenses and great competition. In the press room, where roller troubles often abound, time and money may frequently be saved by adding to the equipment Security Roller Cabinets. These are made entirely of iron and steel and are dust, fire, water and vermin proof. They greatly assist in prolonging the life of rollers and as they contain a liquid substance "Rollerlife" to preserve winter rollers and "Rollerdry" to keep summer rollers in condition, they will soon save their original cost. The Rollers are held in a vertical position thus preventing the sagging of the composition or the loss of rotundity. Unless the rollers are dirty from paper dust they may be placed in the Cabinet and "Rollerlife" will keep the ink from drying. In hot weather if the rollers sweat they should be placed in the Cabinet and an application of "Rollerdry" will materially assist in restoring them to their proper condition.



Security Adjustable Tube Cabinet, for Presses having Rollers of varying lengths

Security Roller Cabinets are made for any size cylinder press and will hold eighteen four-inch rollers. In ordering give the extreme length of roller core over all. The Cabinets are made either stationary or revolving and require but twenty-four inches of floor space.

The very old fashioned and wasteful method of placing rollers in any odd corner or out-of-the-way place should no longer exist in the well-managed printing office. The Security Roller Cabinets represent a great improvement in this respect, as they obviate the danger of damage and tend to increased efficiency. Taking into consideration the convenience and economy they effect, they are not high priced. A circular, fully describing the Security Roller Cabinets, will be mailed free upon request.

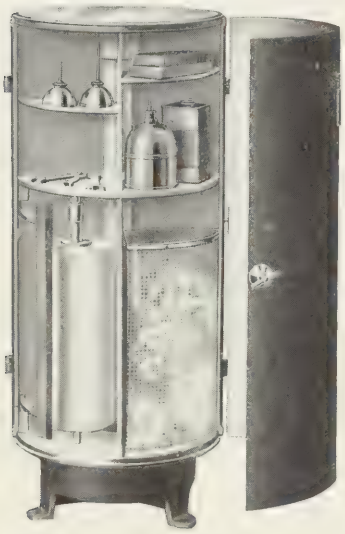


Security Job Press Cabinet, Roller and Ink Storage Side

Prices of Security Roller Cabinets

The Security Cylinder Solid Head Roller Cabinet holds 18 rollers, 4 inches in diameter or under. It is made of iron and steel occupying 23 inches of floor space. Has three doors, revolves and can be placed in a corner or near a wall. List price per inch $1 10

The Security Cylinder Adjustable-Tube Roller Cabinet holds 18 rollers, 4 inches in diameter. It provides for presses having varying length of form, angle and fountain rollers. It is made of iron and steel occupying 23 inches of floor space. It has three doors, revolves and can be placed in corner or near wall. List price per inch $1 20



Security Job Press Cabinet, Tympan Paper, Cleaning Rag Basket, Oil and Benzine Cans, Brush and Tool Side

Security Job Press Roller Cabinet

This is a very attractive piece of iron and steel furniture constructed to hold every job press requisite including composition rollers, tympan paper, waste, ink, benzine can, gauge pins, wrenches, etc. Has plate glass top for ink mixing. Occupies a floor space of seventeen inches, and holds fourteen rollers of uniform length of cores. It is adjustable for any length of rollers. Has two doors, revolves and can be placed in corner or near wall. Built to last a life time.

Weight, 175 pounds. Price $45 00

The Justrite Oily Waste or Rag Can

This Can has received the highest commendation of engineers allied with insurance interests and each Can bears the official label of the National Board of Fire Underwriters, thus insuring protection against other inferior oily waste cans.

It is the only automatic waste can made. The patented foot lever is novel and appeals to all users. A slight pressure of the foot raises the cover and both hands are free to insert the rags. This obviates all desire to block the cover open and greatly increases the efficiency of the Justrite Can over all others. On the removal of the foot from the handle the cover closes automatically. It is easy to carry, absolutely safe, convenient, clean and durable.

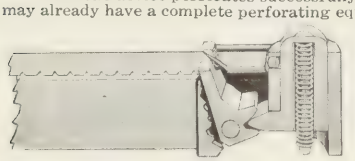
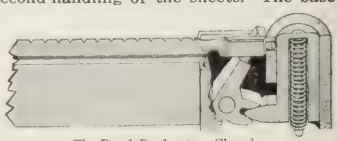
The Burch Perforator

This little device perforates successfully while printing, without inking the stock or cutting the rollers. Although a printer may already have a complete perforating equipment, the Burch Perforator will save the second handling of the sheets. The base of the device is of solid metal, consequently no matter how much pressure is exerted by the quoins, it cannot affect the perfect working of the blade. The head can project into the furniture and needs no support, so no time is wasted on the stone. One simply locks the perforator in the form and the press does the rest. No quad or other makeshift is necessary to paste on the tympan.



The Burch Perforator—Open



The Burch Perforator—Closed

Measurements are taken over all; a ten-inch device just fills a ten-inch chase, but perforates only eight and seven-eighths inches; the head in every case takes up one and one-eighth inches.

Oswego Automatic Clamp Power Paper Cutters

Economy of operation is the first point to consider in purchasing a cutting machine. In the Oswego Automatic Cutters nothing has been spared to produce the most efficient cutting machines that can be built. Uniform accuracy and reliability are always embodied in these cutting machines. They give the greatest cutting output at lowest cost, quality considered. In adopting them for our special line of power cutters, there is full confidence that we are offering printers, binders, box-makers, and other tradesmen, the best cutting machines now made. Ninety sizes and styles of Oswego and Brown & Carver Cutting Machines are made in the only exclusive cutting machine factory in the world. We sell all of them and can provide for the cutting needs of all, whether the requirements be simple or complicated. Write our nearest House for illustrated catalogue and net prices. Each cutter is supplied with one knife, oiler and wrenches. No overhead fixtures or pulleys of any kind are included.

These machines pack, clamp, and cut a pile automatically. The steel indicator band registers position of back gauge. The clamp may be brought down by treadle to see exactly where the knife is going to cut. These machines cut as accurately as the Brown & Carver Hand Clamp Cutters. The automatic clamp is independent of the knife and is powerful and reliable. The stroke is fast and clean. The mechanism is the simplest and there are few moving and wearing parts.

The table is grooved (plain, if desired); front scored one inch lines with brass rule graduated to sixteenths of an inch, back graduated to sixteenths of an inch. Interlocking clamp and back gauge cut work up to three-quarters of an inch. Removable flat plate for clamp prevents clamp fingers indenting fine work. Back gauge is in three parts. Cable gauge movement. Clamp rises six inches.

The line of Oswego and Brown & Carver Paper Cutters, illustrated and described on this and other pages, is unquestionably the very best that human ingenuity and experience can construct. The American Type Founders Company unhesitatingly recommends these machines to printers requiring the very highest grade of paper cutters. Thousands of them are in daily use and in every case they give the greatest satisfaction. If you are contemplating the purchase of an up-to-date paper cutter, permit us to give you additional information and quote you our net prices.

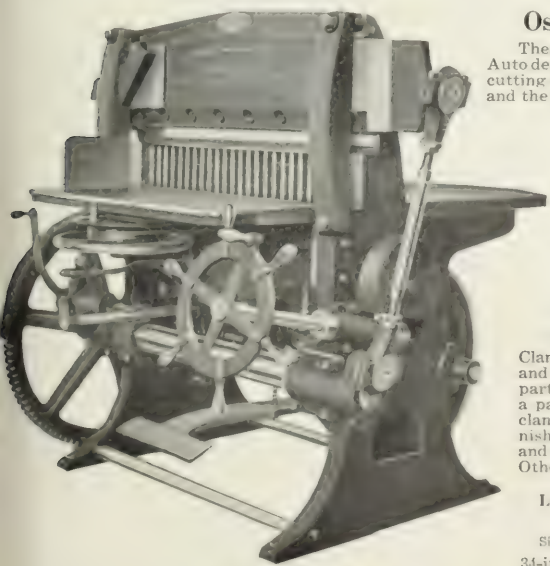
There is no other line of paper cutters so extensive as that manufactured by Oswego Machine Works. For years it has made a study and specialty of cutting machines. Its list ranges from the diminutive sixteen inch bench cutter to the mammoth eighty-four inch automatic clamp. This specializing on paper cutters is undoubtedly the reason why the Oswego and Brown & Carver lines have proven so successful. In the Oswego factory every facility is provided for the economical manufacture of these machines, and, consequently, the prices are as low as is consistent with the high quality of the machinery. The American Type Founders Company has used these machines and can vouch that they are as represented.



Oswego Semi-Automatic Power Cutter

Oswego Paper Mill Automatic Power Cutters

These machines are the same in every particular as the regular Oswego Auto described above except the clamp and back gauge are plain (not fingered), cutting work up to three and one-half inches; the table is plain (not grooved), and the back gauge is in two parts.

Oswego Semi-Automatic Power Cutters

With Foot Treadle and Hand Clamp

The clamp on these machines may be operated as on the regular Hand Clamp Cutters, or it may be brought down to the work quickly by treadle and will lock automatically on the work or return to the top, as desired. A partial turn of the hand-clamp wheel will give full clamping pressure, and a partial turn, in reverse, while foot is held on treadle, will release the clamp so it will rise automatically to the top. These machines are furnished regularly with cable gauge movement (screw movement, if desired) and pilot hand-clamping wheel (round rim clamping wheel, if desired). Other equipment is the same as regular Hand Clamp Cutters.

Oswego Hand Wheel Drive Cutters

The driving mechanism of these machines is powerful, and geared so the machine is easily driven by hand power. The table is plain (not grooved), front scored in one-half inch squares with brass rule graduated to sixteenths of an inch; back graduated to sixteenths of an inch. Extra long back side gauge. Detachable front side gauge can be adjusted in and out. The clamp and back gauge interlock, allowing work to be cut up to one-half inch. The clamp rises three and one-half inches. Back gauge is in two parts, the split part is flush on one side, forming another side gauge near the middle of machine. This allows the knife to be worn equally. Round rim clamping wheel (pilot clamping wheel furnished, if desired). Gauge screw movement. The hand wheel is graduated to measure the movements of back gauge.

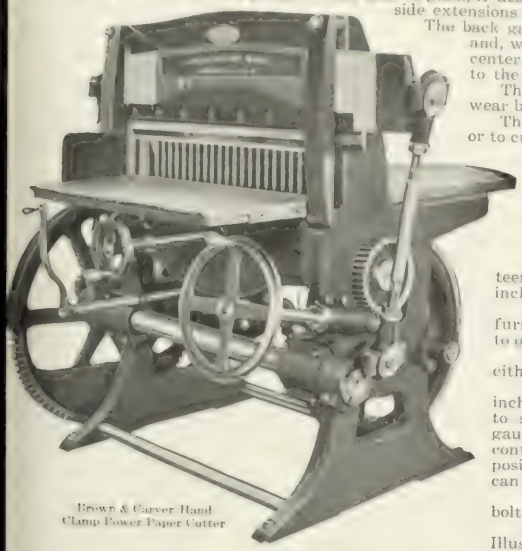
Oswego Die-Cutting Press

Write for Descriptive Pamphlet

Brown & Carver Hand Clamp Power Paper Cutters

Will cut work up to three-quarters of an inch wide, and the knife rises six and one-half inches. Table is grooved to prevent sheets working under gauge, or the table is plain, if desired. The table is convenient height, and is arranged for putting on two side extensions in front for handling work before and after cut.



Brown & Carver Hand Clamp Power Paper Cutter

The back gauge is in three parts regularly (or in two parts, or one part, if desired), and, when split, the section forms a side gauge so that work can be cut near the center of knife as well as at the side of the machine. The back gauge is close to the side gauge for small work.

The knife is bolted solidly to the bar, and is instantly adjusted for level or wear by a turn of the connecting rods.

The direct crank motion to the knife-bar never allows knife to fall short or to cut into the stick.

The clamp is balanced to run the entire distance, up or down, with one spin of the wheel. The clamp is provided with a flat, removable plate to prevent clamp fingers from indenting line work.

Solid clamp and back gauge, cutting up to three and one-half inches, are furnished to order.

Pulleys furnished regularly on side shown in cut, but can be furnished on opposite side to order.

The fast screw movement for back gauge, with wheel divided to sixteenths, is furnished regularly on cutters thirty-four inch to eighty-four inch.

Quick cable movement, with indicator reading to sixteenths, will be furnished instead of screw movement, if desired, without extra charge, to order.

The fifty-four inch to eighty-four inch machines can be started from either side by the bar across the front.

The power movement shown in Brown & Carver catalogue on fifty-four-inch to eighty-four-inch machines, for operating back gauge, is furnished to special order only (extra). This labor-saving device moves the back gauge backward or forward by power, a lever swung to the right or left controlling both the direction and the speed. Its indicator wheel reads the position of the back gauge to sixteenths, and, if desired, a micrometer pointer can be attached to read to less than thousandths.

Friction clutch, cut gears, steel shafts, brass rule, case-hardened steel bolts, iron of a durable quality.

All machines subjected to a running test before leaving the works. Illustrated catalogue free.

Ontario Power Cutters

With Hand Drive Attachment

These machines have points of excellence resulting from thirty-seven years' specializing cutters. The advantage of this specialization is realized by the users of Oswego-made cutters. The Ontario Power Cutters, with hand drive attachment, are adapted for all classes of work. They are fast, powerful, convenient and accurate. The high speed of cut is obtained with low speed of driving wheel, which indicates the easy action and the small power required to drive. Each cutter is one-half inch wider between frames than the listed size.

Size	Shipping Weight	List Price
32-inch	4700 lbs.	$635 00

The thirty-two inch Oswego Automatic Clamp Cutters have been greatly improved by building them on the same general lines as the regular thirty-four inch, thirty-eight inch and larger Oswego Power Automatic Clamp Cutters, which greatly increase their worth. All the Oswego Automatic Clamp Cutters have this advantage: The heavy pressure of the automatic clamp is applied before the instant of cutting and does not consume power during the cut or after the cut is made. The new Oswego Automatic cuts the maximum quantity of accurate work and saves its purchase price in a few years for this one point alone. Other improvements have been made in the other automatic machines shown in the Oswego list, all tending to increase their efficiency, improve their action and minimize the power required to drive the machines. As a matter of fact, it has been the policy of the manufacturers to sacrifice everything, such as patterns, tools, drawings, stock and effort in order to consummate an improvement and keep the Oswego machines up to that high standard of merit which they have enjoyed for so many years. The makers have gone ever forward with the idea that an improvement is the most precious thing in the world and must be incorporated in their machines. This policy has been an expensive one, but it is the best and only one in the long run.

Oswego Hand Lever Paper Cutters

The new toggled lever on the Oswego Lever Cutters, and the double shear, make the cut easier as the knife goes down. Simple and quick adjustment to knife; no long row of bolts to loosen (the knife has a solid backing in the bar instead of abutting against the points of screws). The lever motion is self-contained, the upper and lower turning points being both in the solid, right-hand frame casting.

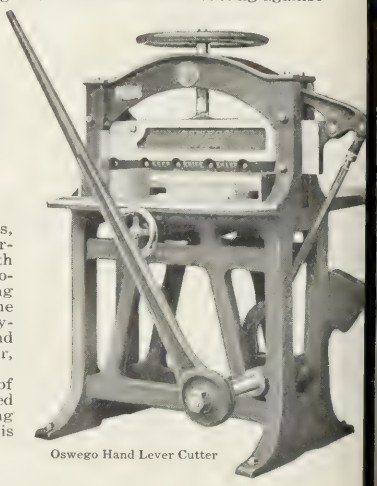
Oswego Hand Lever Cutters

Vertical Stroke

For textile mills, manufacturing tailors, printers, book makers, novelty manufacturers, who wish to cut serrated or special-shaped edges, or tab cards, or to pink cloth samples. The Oswego Automatic, the Oswego Semi-Automatic, and the Brown & Carver Hand Clamp Cutting Machines, thirty-four inch to eighty-four inch, and the Oswego Bench and Lever Cutters, sizes sixteen to thirty-two inches, are built to order with vertical stroke, and are also built to order with vertical, changeable to shear, stroke.

The vertical stroke permits the cutting of piles of paper, cardboard, cloth, etc., with any special-shaped knives within the capacity of the machine. In pinking cloth samples on the Oswego Cutters there is no waste of material, as the serrated edge is obtained both front and back of the knife at one stroke where the pile is cut.



Oswego Hand Lever Cutter

Diamond Lever and Combination Lever and Power Paper Cutters

The Diamond Cutter is a radical improvement in design over any other paper cutter. It involves new features and new principles of construction which are invaluable. The handsome box frame, the symmetrical arch, and the general compactness, simplicity and solidity which characterize it are noteworthy. The box frame, which includes the cross braces supporting the center of the bed, is cast in one piece. The arch is also cast in one piece. Excepting the working parts, the Diamond consists principally of three pieces—the frame, the arch and the bed. This means a vast gain in simplicity and solidity. The Diamond Cutter is arranged for either hand or power. Lever machines are shipped out with holes ready for receiving the bolts which fasten on the power fixtures. These fixtures can be purchased and applied at any time. With each power machine a lever is furnished. By simply unscrewing and changing one stud the power machine is ready to be used by hand. The natural tendency of a cutting machine bed is to sag in the center under the constant strain of heavy cuts. The Diamond Cutter bed rests on two massive adjustable center supports. The result is that it cuts through the last sheet as well as the first. The exact position of the back gauge is shown by the steel back gauge tape, so arranged as to be on a level with the operator's eyes. It is simple, effective and reliable—graduated to sixteenths of an inch. There is a figured scale in the bed, both front and back of the knife, also graduated to sixteenths of an inch. By an ingenious mechanism the speed of the back gauge screw is materially increased. The Diamond screw requires for its operation only one-fourth the average time required by others, yet is under perfect control.

A thumbscrew conveniently placed holds the back gauge securely at any point. The machine is operated by a worm gear, the most powerful drive known. This gear, which is made of semi-steel, runs in oil and is practically everlasting. The new friction clutch grips the drive wheel instantly and powerfully. At the same time it prevents sudden strain and consequent breakage. It drives the knife at a speed of twenty-four cuts per minute. The same lever which operates the automatic throw-off brings into play an automatic brake which promptly stops the shaft or driving wheel without noise, shock or wear. The back gauge is of the well known "Easily Squared" design. It can be placed parallel with the knife in a moment, no tool but a wrench being required. When sold as a lever cutter, a one-piece back gauge is furnished. *With the Combination Lever and Power Cutter there is furnished a triple split-back gauge which allows the trimming of three lengths of stock at one time. Side gauges are accurately placed. The minimum width of cut is three-quarters of an inch. The maximum is one-half an inch more than advertised width of cutter. The knife adjusting screws, operated by a pin wrench, are in full view of the operator as he stands in front of the machine. The quick-acting clamp interlocks with the back gauge. An extra large, well finished hand wheel is provided. The clamp rises three and seven-eighths inches from the bed. The clamp raises or lowers one inch every time the wheel makes two revolutions. Each Diamond Cutter is supplied with our counterbalanced curved lever. This is out of the way when up, and waist high at the end of the stroke. It materially lessens the labor of cutting by hand. The bed is grooved for half-inch cutting sticks. They have eight cutting surfaces same as large ones, and cost only one-third as much.

32-inch	32½ inches	32 inches	¾ inch	1785 pounds	290 00	16 00

*With each set of power fixtures sold separately, we include a triple-split back gauge to take the place of the one-piece back gauge regularly furnished with the lever cutters.

Write for further particulars regarding the merits of these machines.

Chandler & Price Power Paper Cutter

This Power Paper Cutter is very simple in construction, having no extra parts and all parts are interchangeable wherever possible. A deep throat and ample table are salient features. Provision for safety is obtained by the controller knob which must be pulled forward and then given a quarter turn before the clutch engages with gear and the knife descends. It never repeats so the knife cannot fall. This prevents accidents. The speed is twenty cuts per minute, each cut as straight as a die. The power mechanism consists of the worm and gear drive, the most powerful. Power may be furnished by either belt or motor. Worm is keyed to worm shaft, which ends in belt wheel. The worm drives the gear wheel, so that a great power is always back of the knife. Worm wheel runs in oil, thus making the cutter noiseless, easy running and well lubricated. The knife is made of fine steel and is readily adjustable. The knife bar is fitted to housings, which are three inches deep. This avoids deflection from wear. It is easy to clamp because of the extra large hand wheel. The clamp fingers have a broad surface to avoid creasing of stock. The clamping may be as narrow as three-quarters of an inch. All gauges are accurately squared with the knife. Back gauge extends within one inch of side gauge, so small stock can slide by. The table is amply large for all purposes. The legs, braces, table and knife bar will not spring under strain as they are of very heavy pattern. The construction of this Cutter is the strongest possible, and each Cutter is guaranteed.

Two horse-power required for each size

Chandler & Price Lever Paper Cutter

Few parts and utmost simplicity of mechanism is characteristic of this Cutter. While the Cutter is from two hundred to three hundred pounds heavier than other makes of the same size, this extra metal is so distributed as to withstand strains. The legs, braces, table and knife bar are of very heavy pattern. Housings two and five-eighths to three inches deep obviate deflection of the knife bar by wear. A deep throat and ample table permit the handling of paper in quantity. Each cutter works quickly and with a minimum of effort being perfectly counter balanced. The weight and lever are adjustable. Clamping is made easy by an extra large hand wheel. To avoid creasing the stock the fingers of the clamp have a broad surface. The back gauge and clamp interlock, clamping as narrow as five-eighths of an inch. The back gauge extends to within one inch of the side gauge. Each gauge is accurately squared with the knife. All parts are strictly interchangeable.

Advance Lever Paper Cutters

The Advance Lever Cutter is mechanically correct, perfectly constructed and combines in the highest degree simplicity, strength and efficiency. Its serviceableness is increased by various helpful devices, the outcome of many years successful cutter-building experience. The frame is so constructed as to afford the broadest possible base and at the same time concentrate the resistance where most needed. A massive brace securely bolted to the side frames near the bottom supports the bed directly under the center, insuring perfect rigidity under pressure of clamp and knife. The bed is finely machine finished and scraped to insure easy action of working parts.

The ingeniously constructed curved lever combines powerful leverage with convenient shape. With the cut completed it is only a short distance below the bed and about waist high to the operator, thus allowing the application of greatest power when most needed.

When the knife is raised the lever is entirely out of the way and does not interfere with the proper handling of stock. The curved shape also permits reinforcing the lever with a heavy rib at the point of greatest strain. Being perfectly counterbalanced there is no danger of the knife falling unexpectedly. The knife is controlled by a link motion, which secures a smooth, easy shear cut with least power.

Gibs and set screws in the frame take up the wear in knife bar, adding materially to the durability of the machine. Side gauges on both sides, front and back of the knife, are a valuable feature, enabling stock to be squared on either side of the cutter, a great convenience and saving of time, while equalizing the wear on the knife. The extra long back gauge is equipped with our "easily squared" device by means of which it may be accurately adjusted to the knife in a moment's time. It interlocks with the clamp and permits the squaring of cuts only three-fourths inch wide. Half-inch cutting sticks are provided, having eight cutting surfaces same as large ones at one-third the cost. A figured scale is cut in the bed, back and front. The back gauge screw is supported at both ends, preventing wear on back gauge nut. Strength, power, durability, and accuracy are thus fully provided for in the construction of the Advance Lever Paper Cutter.

Advance Pony Lever Paper Cutter

Advance Pony Lever Paper Cutters

The Advance Pony Lever Cutters are unequaled for cutting and trimming small work. They combine great strength and durability with ease of operation. Accuracy is assured by side gauge back and front on left side, which also forms our Challenge side frame protector, and our "easily squared" back gauge which comes within one inch of the side gauge. The interlocking back gauge and clamp allows stock to be gauged within one-half inch of knife. Half-inch cutting sticks, eight cutting edges, are an economical feature. Cutters square fully sixteen and nineteen inches respectively, cutting bed being one-fourth inch wider. No springs, gears or cams to get out of order. These machines may be furnished either as bench cutters or with the iron stand shown in the illustration.

List Prices and Dimensions of Advance Pony Lever Paper Cutters

Size	Shipping Weight	Price	Price for Extra Knife
16-inch With Iron Stand as shown in cut	420 pounds	$71 00	$6 00
16-inch Without Iron Stand	280 pounds	55 00	6 00
19-inch With Iron Stand as shown in cut	505 pounds	88 00	7 50
19-inch Without Iron Stand	365 pounds	72 00	7 50

The Peerless Gem Paper Cutter

The Peerless Gem Paper Cutter is of the well-known "Gem" style and is not an experiment. For thirteen years it has been before the public and has stood the test of practical experience. While some minor changes have recently been made—changes which have constituted improvements of no mean merit—the machine is built on practically the same lines and from the same patterns as the original machine. The leverage is as nearly perfect as anything can be. The frame and bed are well braced. The counterbalance is hung inside the frame out of the way. The knife bar is heavy and accurately finished and the knife is deeper and thicker than usual. The knife bar stop is an important feature as it prevents the breakage of the bell crank, when the lever is thrown up after the cut. The knife bar gibs are important, as any possible wear in the ways may be easily taken up and the Cutter thus made to last for years. The tables are accurately lined in half-inch spaces at right angles to the knife, and the two larger sizes are cross-lined in the same manner on the front part of the table. A metal measuring rule graduated to eighths of an inch, is mortised into the table in view of the operator. The intersecting back gauges are furnished with all sizes, permitting the cutting of very narrow stock. These gauges are adjustable, although they are originally set parallel to the knife when the machines are tested before shipment. The two larger sizes have split-back gauges.

All sizes are furnished with suitable side gauges, both front and back of the knife.

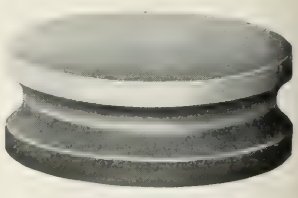
Paper Cutter Knives

We can furnish, on short notice, Paper Cutter Knives for any of the standard makes of paper cutters. As the prices and sizes for the different makes vary considerably, we do not list them, but we will promptly quote you on any make and size you may require. Do not fail to write us when you are in the market.

Paper Cutter Knives.

Carborundum Knife Stone



Carborundum Knife Stone

The Carborundum Knife Stone is something entirely new. The manufacturers have made a convenient size and shape to be used on paper cutter knives. After a knife has cut considerable stock and begins to show signs of dullness, the stockman rubs the Carborundum Knife Stone over the paper cutter knife a few times, first using the coarse surface and finishing the sharp edge with the fine side. The stone is four inches in diameter and one and one-half inches in thickness, made with one side coarse grit for rough work, to cut away metal, or take out nicks, etc., and one side fine grit for putting a keen sharp edge on the knife.

Price, per stone **$1 50**

American Roughing Machine

The demand for a roughing (or pebbling) machine is constantly increasing. Heretofore roughing a job of nicely printed halftones has been considered more or less of a luxury, besides necessitating a great deal of trouble on account of the limited number of machines in operation, when such work was done for the trade. In some of the larger cities plants have been established making a specialty of this work, but the annoyance in shipping the printed stock back and forth, has limited the use of the Roughing Machine. There is no doubt that running the printed stock of any finely printed job through the machines, adds greatly to its appearance. Buyers of printing are generally anxious and willing to pay the extra charge for this work. The process is a simple one, and anyone can do it with the aid of the American Roughing Machine. It is just a matter of the proper amount of "squeeze" and feeding the stock through the machine, as is done on a folding or ruling machine.

The American Roughing Machine will emboss or rough any kind of paper. The steel roller can be engraved to represent the coarse, fine or medium "eggshell" finish. If desired it can be engraved with the "skytogen" finish, which gives the dotted leather effect. Each machine, as shipped from the factory is equipped to do but one style of roughing. Other rollers can be supplied, engraved to order, at an additional expense, as listed in the table below. The machine is shipped complete for operation, with tight and loose pulleys and belt shifter, together with feed and delivery tables and sets of clips for stripping sheets from rolls. The American Roughing Machine is made in four sizes. The fifteen inch and twenty inch sizes are bench machines. The twenty-four inch and thirty inch sizes are regular high frame or floor machines, as shown in the cut. While the large machines are recommended, the smaller machines will do the work equally as well.

The Boston Wire Stitchers

Durability *Rapidity*

Once Used—Always Used
They are Demonstrably
the Very Best

Neatness *Simplicity*

The above cut shows twenty-one Boston Stitchers installed one after another in the plant of the McCaskey Register Company, Alliance, Ohio

The Self-Regulating Stitcher

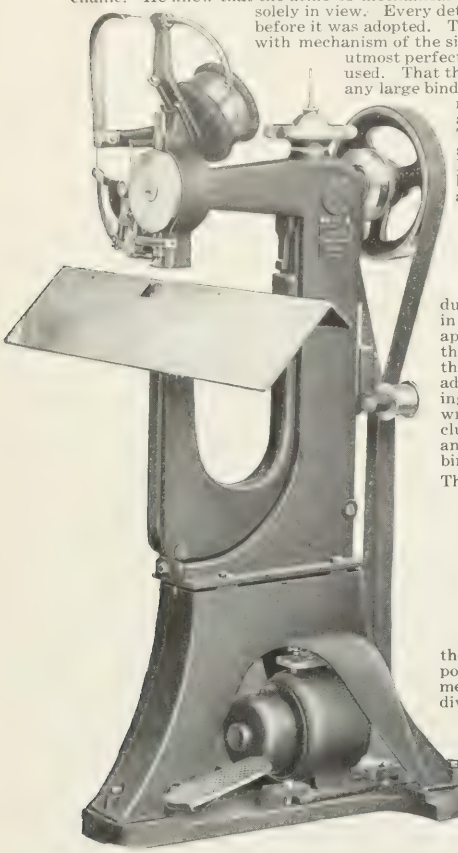
As merchants in machinery for printing plants, we are always on the lookout for the Easy Sellers—machines of such unequalled merit that the sale of one insures orders for additional machines as they may be required. The Boston Self-Regulating Wire Stitchers are in this satisfying class and once used are always used

American Type Founders Company

GENERAL SELLING AGENT

The Boston Wire Stitchers

On certain occasions machines cause almost a complete revolution in the method of manufacture. Previous to the advent of the Boston Wire Stitchers, makers of similar lines were under the impression that the highest perfection in wire stitching had been reached and there was no room for further improvement. The inventor of the Boston Wire Stitcher, however, was not satisfied with the mechanical properties of existing stitchers. He believed that a machine of this class should be, to a very great extent, automatic in its action. He was not satisfied with a machine that required the almost constant supervision of an expert mechanic. He knew that the acme of mechanical perfection was comprised in the word "simplicity" and he worked with this idea solely in view. Every detail of the invention was carefully thought out and proved to the minutest particular before it was adopted. The result has been the production of a machine with wonderfully few parts and with mechanism of the simplest. The Boston Wire Stitcher is the acme of simplicity, combined with the utmost perfection of detail in its work. It is, today, the favorite machine with operators wherever used. That this is so may readily be substantiated by investigating the kind of stitchers used in any large bindery. It will be found that the Boston has been adopted in preference to any other make of stitching machine. These are facts which should be given careful consideration by intending purchasers before additional wire stitching machines are bought. The quick adjustment and rapid manner in which a change may be made from flat stitching to saddle stitching are matters which count for much with operators. The Boston Wire Stitchers, in addition to being exceedingly simple in construction are built strongly for working under every possible condition and present a handsome appearance.



No. 3. Showing Combined Flat and Saddle Table and Electric Motor Equipment

The No. 3 Boston Self-Regulating Wire Stitching Machine

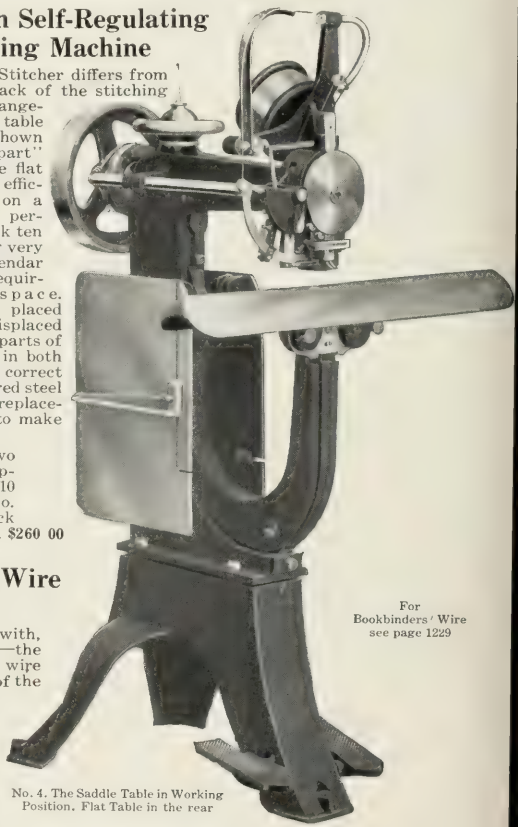
The No. 3 and No. 4 Boston Wire Stitchers have been on the market nine years, during which time more than 2,000 have been sold and are in satisfactory operation in all parts of the United States, Canada and abroad. All users of these machines appreciate their labor-saving features, simplicity of construction and the fact that they can be handled entirely by the operators, something heretofore impossible in this class of machinery. The most prominent feature of Boston Stitchers is the single adjustment for all parts; that is, the operator gauges the thickness of work by turning the hand-wheel, when all other parts are automatically adjusted. No tools or wrenches of any kind are necessary. This self-regulation is important and an exclusive feature in the "Boston," placing it within the complete control of the operator and giving that exquisite sense of wire stitcher satisfaction — a revelation in the bindery and printing office.

The No. 3 Boston Self-Regulating Wire Stitching Machine. Capacity, two sheets to exceeding three-eighths inch. Wire used, 30, 28, 27, 26, 25 round; 21x25 flat; shipping weight, 250 pounds; floor space, 26x26 inches; diameter of pulley, 10 inches; speed, 120 to 140 revolutions a minute; belt, 1½ inches. List Price **$210 00**

The No. 4 Boston Self-Regulating Wire Stitching Machine

The No. 4 Boston Wire Stitcher differs from the No. 3 in frame, space back of the stitching point, weight and table arrangement. The saddle and flat table divides at the center, as shown in the "working part" illustration. The flat table is the most efficient ever placed on a wire stitcher and permits gauging back ten inches, something very valuable in calendar and other work requiring long back space. These tables are placed in position and displaced by merely pulling the thumb-lock pins, without the use of tools. Many parts of the No. 3 and No. 4 "Bostons" are interchangeable with each other, and in both sizes worn parts may be instantly replaced, with positive assurance of correct fitting, as each part is made in a jig or tool and in the instances of tempered steel parts, ground to gauge after hardening. No difficulty can be had with replacements, many thousands of dollars having been invested at the factory to make this possible.

The No. 4 Boston Self-Regulating Wire Stitching Machine. Capacity, two sheets to one-half inch. Wire used, 30, 28, 27, 26, 25 round; 21x25 flat; shipping weight, 335 pounds; floor space 26x28 inches; diameter of pulley, 10 inches; speed, 120 to 140 revolutions a minute; belt 1½ inches. The No. 4 is especially valuable for calendar stitching, having ten inches of back space for gauging. List Price **$260 00**

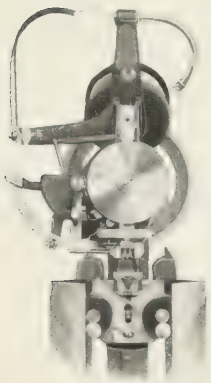


No. 4. The Saddle Table in Working Position. Flat Table in the rear

For Bookbinders' Wire see page 1229

The Boston Self-Regulating Wire Stitching Machine

The "working parts," illustration herewith, show all the principal parts of the "Boston"—the wire tension, feed grip, wire straightener, wire cutter and clinchers. These are in full view of the operator; in fact, the wire may be observed from the time it leaves the spool until it is driven into the work—something possible in no other stitcher.



No. 4. The Feed Sector, Wire Cutter, Clinchers and Working Parts

Something New

We here illustrate a new feature in wire stitching machines, and possible only in the "Boston," owing to its wonderful simplicity.

Figure 1 shows the actual size of the half-inch width of stitch for which the Nos. 3 and 4 machines are regularly fitted. If desired, special extra parts can be furnished at small cost ($18.00) for making a three-eighths inch width of stitch, with a consequent large saving in wire. Figure 2 illustrates this stitch—actual size. The change in the machine can be made in three minutes, and consists of replacing the driving bar, cutter plunger and supporter and slightly shifting the feed sector—work which can be done by the operator. The three-eighths inch stitch is excellent for small booklet and other thin work where wire from No. 30 to No. 25 round is used. We cannot give too much importance to the fact that the tremendous advantage in the Boston Wire Stitcher is its simplicity in construction. The operator can easily take apart and assemble the working parts of the Boston Wire Stitcher.

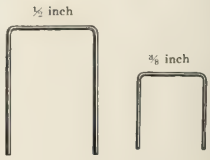


Fig. 1 Fig. 2

The No. 7 New Model Boston Wire Stitcher

The No. 7 Boston Wire Stitcher differs from the No. 3 and No. 4 in nearly all features, excepting the single adjustment for all parts. A great many of these machines are in successful operation in every parts of the country, and the machine is confidently offered the trade as the most powerful heavy stitcher of its capacity. The work-table is convertible from flat to saddle, or vice versa, by merely pulling the thumb-lock pin, and has special front extension for wide work.

The perfected wire straighteners positively straighten the wire for accurate feeding and driving.

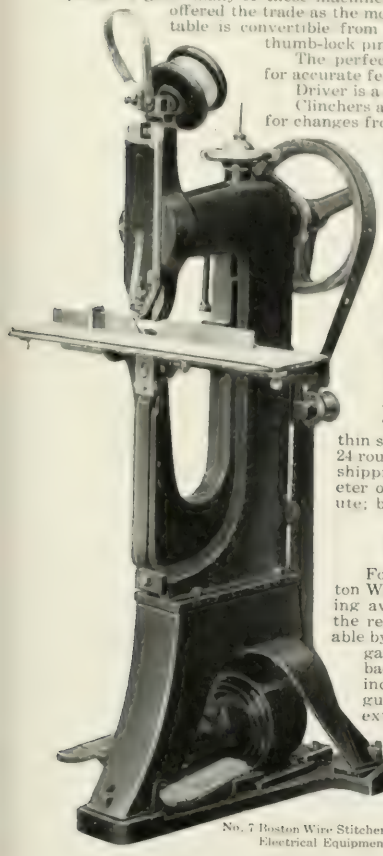
Driver is a single piece of thick steel, quickly replaced when worn.

Clinchers are instantly lifted out of the clincher plate at the top, for changes from flat to round wire if desired. Fixed and movable feeding grips and wire cutters are single pieces, readily replaced when necessary. The cutters are interchangeable, each having four cutting surfaces, and are made of finely tempered steel.

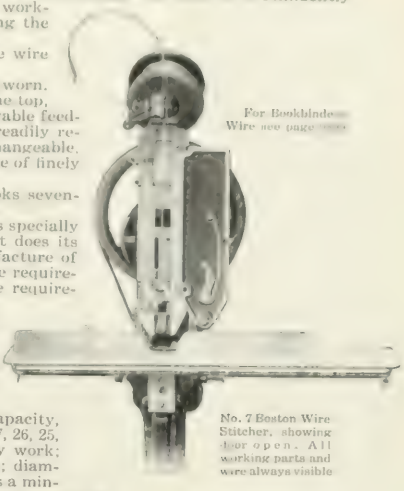
The capacity is from thin pamphlets to books seven-eighths inch in thickness of any regular papers.

The No. 7 New Model Boston Wire Stitcher is specially intended for thick work of various kinds and it does its work well. Extensive experience in the manufacture of these machines has taught the manufacturer the requirements of a heavy stitching machine, and these requirements have been fully met.

There has always been a demand for a stitching machine that would do heavy work in a satisfactory manner, and the No. 7 New Model Boston will fill the bill. The American Type Founders Company will be pleased to give intending purchasers any additional information required.



No. 7 Boston Wire Stitcher with Electrical Equipment



For Bookbinders' Wire see page [illegible]

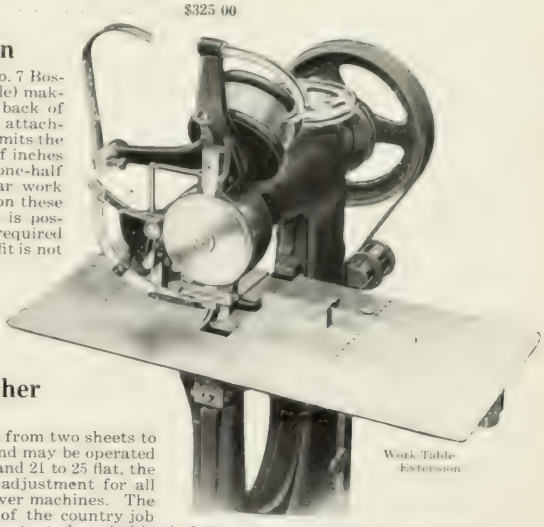
No. 7 Boston Wire Stitcher, showing door open. All working parts and wire always visible

The No. 7 New Model Boston Wire Stitcher. Capacity, thin stitching to seven-eighths inch. Wire used, 28, 27, 26, 25, 24 round; 21x25, 20x25 or 20x24 flat, the last for heavy work; shipping weight, 400 pounds; floor space, 26x27 inches; diameter of pulley, 12 inches; speed, 100 to 115 revolutions a minute; belt, $1\frac{1}{2}$ inches. List price $325 00

Work Table Extension

For attachment to the No. 3 and No. 7 Boston Wire Stitchers (not interchangeable) making available for gauging the space back of the regular table. Nickel plated and attachable by bolts; no fitting necessary. Permits the gauging of work eight and one-half inches back on the No. 3 and seven and one-half inches on the No. 7. The regular work guides and thumb screws operate on these extensions. With this extension it is possible to do the utmost yet required in wire stitching. The outfit is not complete without it. With the Boston Wire Stitcher, equipped with this extension, you can do any job which comes your way.

List price, complete, $11 25



Work Table Extension

New Model No. F 14 Boston Wire Stitcher

For Foot Power Only

The only practical foot power wire stitcher on the market. Capacity from two sheets to one-half inch. Has flat and saddle tables similar to the No. 3 and No. 7, and may be operated seated on a stool or standing. Uses wire from No. 30 to 25 round and 21 to 25 flat, the latter for thick work. Built on the lines of the No. 7, with single adjustment for all parts, and has the many exclusive features of the regular power machines. The foot power Boston stitcher was made to meet the demand of the country job offices, where power is not always available or bindery work constant. Its stitching is fully up to the high standard of the power machines, and it is recommended as a thoroughly efficient stitcher in every respect.

New Model No. F 41 Boston Wire Stitcher. For foot power only. Capacity, two sheets to one-half inch. Wire 30, 28, 27, 26, 25 round; 21x25 flat. Weight, 180 pounds; floor space, 21x26 inches. List price . . $155 00

No. F 14 Boston Wire Stitcher for foot power only

Boston Bindery Tables

Adjustable to any angle, also to height of any Wire Stitcher

These strong and convenient tables (patented) are made by the Boston Wire Stitcher Company to use with the Boston Wire Stitchers, but they are equally desirable for all Wire Stitchers. Each table will operate as a magazine, a saddle or a flat table, and be found valuable in binderies where heretofore a carpenter has had to rig up a stationary affair, admitting of no change. The change in position is accomplished by manipulating the clamps shown in the saddle illustration, the work of a few seconds. Tables are adjustable to any angle; also up and down to conform to the height of the iron table on stitching machine. Base is of iron and heavy enough to counter-balance any work placed on the tops. These tables fill a long-felt need in binderies and are the only equipment on the market for this work.

List price, each $10 00

Flat Saddle Magazine

Boston Bindery Tables may be used with every make of wire stitching machine

Electric Equipment

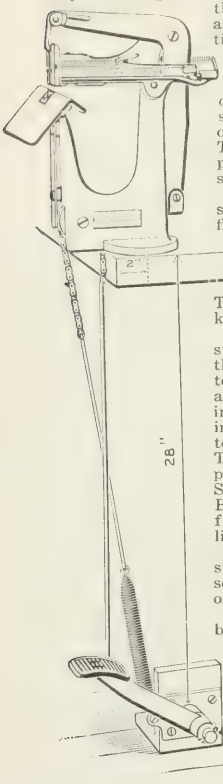
On the preceding page is shown a No. 3 "Boston" equipped with individual motor. This equipment, suitable for all sizes, takes up no extra space, and consists of foundation bed with rolls for moving; motor, belt, belt tightener; also clamps and bolts for motor. Motors can be furnished for any current—direct or alternating—at the following prices for the complete motor equipment:

110 or 220 volts—direct current	$65 00
500 volts—direct current	75 00
104 to 110 volts—alternating current, sixty cycles, single phase	70 00
208 volts—alternating current, sixty cycles, single phase	70 00

These motors will operate in single, two or three phase circuits, and the first three styles are usually in stock for prompt shipment. Alternating current motors of 125 cycles and voltages not listed above, furnished to order. All, excepting for 500 volt, may be attached to lighting service by removing the glass bulb and screwing in the stitcher extension wireplug. Wire and plugs are obtained from any electrician. 500-volt motors require a starting box.

The Boston Staple Binder

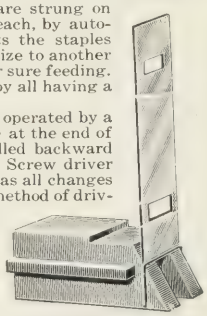
The Boston Staple Binder, like the Boston Wire Stitcher, is built on distinctly new lines, with many valuable features never before used in a stapling machine. It is the nearest approach to a regular stitcher yet devised, and its work is neater and better than that of any stitcher other than the Boston. It is difficult to distinguish its stapling from the best wire stitching. Staples are strung on metal cores (no shrinking or swelling of wood) with paper covers, and placed in the machine at the right-hand side, just as received, without removal from cores. The cores may be lifted out of the stapler and replaced as often as necessary without loss of staples, saving from twenty-five to fifty per cent in staples over all the other machines. The Boston Stapler employs a supporter to prevent buckling staples, this being an exclusive feature and one found only in the regular wire stitching machines. The supporter also permits the use of finer wire than heretofore possible. The result is cleaner work and less cost. Clinchers are the same as in the regular Boston Wire Stitching Machines, operating effectively for even, flat clinching. They will not clog if the stitch be missed, and, being in plain sight and easily detached, will retain their efficiency indefinitely. The driver is a single piece of hardened steel, reversible, and can be instantly replaced when worn without the aid of a wrench. Iron tables are provided at each side of the stitching head with pockets underneath to hold four boxes of staples. These tables are of a height to allow the operator to stand or work from a high stool as may be desired. The Stitcher Work Table tips forward or back for flat and saddle, and is held in the flat position by the back gauge. An extension table is also provided at small cost, making it possible to staple four and one-half inches back.



Style B, Bench

One of the most important features of the Boston Stapler is the method of using staples. (See core on page 1229.) Wire No. 26, round, is used, the same being slightly flattened in the process of staple making. The staples are strung on metal cores of three hundred and thirty-four each, by automatic machinery. A paper covering protects the staples from moisture, permits of changes from one size to another without waste, and keeps the staples in line for sure feeding. This is an entirely original idea and will be appreciated by all having a knowledge of loss through old methods.

The feed is positive, the hardened steel pusher being operated by a steel spiral spring which also engages to a locking device at the end of the tin core to hold the same in position. This lock is pulled backward to release the core when sizes of staples are changed. Screw driver and tools are unnecessary after the stapler is assembled, as all changes in staples are made without them. The illustration shows method of driving and how the supporter operates to enable fine wire to be driven to the maximum capacity of the machines. The reversible driver and staple are also shown, the supporter retiring as the stitch is forced through the work. Staples will never buckle when so supported, and the Boston Stapler is the only machine so provided. This feature is of great value and makes the quality of stapling the best.

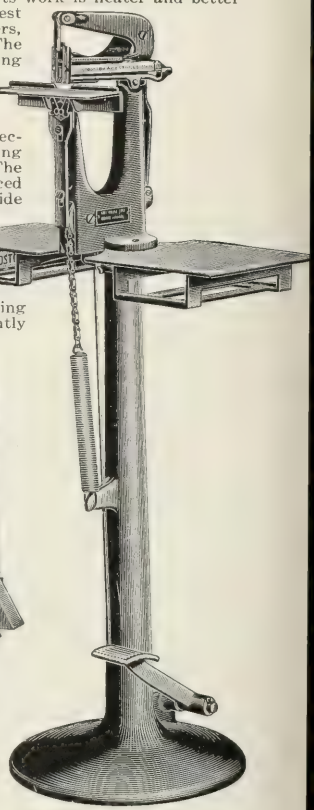


Showing Driver, Staple and Supporter

The foot power Boston Stapler is made in two styles. Style A has a pedestal, and Style B must be screwed to a bench or table, the treadle attaching to the floor. The capacity of both styles slightly exceeds three-sixteenths of an inch, flat or saddle work.

Buyers of the Style B Stapler should note how the same is attached to a bench and that a floor block of wood must be provided.

Staples are put up in packages of five thousand, there being two sizes: one-quarter inch for thin work and three-eighths of an inch for thick work. Shipping weight of Style A, one hundred and ten pounds; Style B, fifty pounds. Floor space, fourteen by twenty-four inches.



Style A, Pedestal

Prices of the Boston Staple Binders

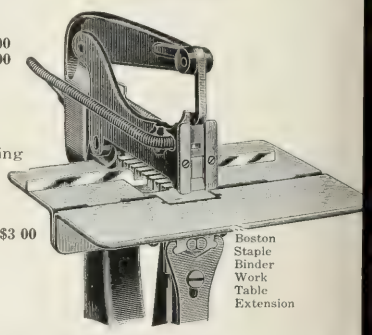
Style A, Pedestal $35 00
Style B, Bench 25 00

Boston Staple Binder Work Table Extension

For Use on Style A and Style B Boston Staplers

A convenient extension table when it is desired to gauge flat work back of the stapling point. Suitable for calendars, pads, novelties, etc., the distance being four and one-half inches. Made of cast iron, nickel-plated and is bolted to the back of the regular work table. A neatly printed circular describing the Boston Staple Binder will be mailed to you upon request. It will pay you to become fully advised as to the merits of the Boston Staple Binder.

Price, each, net $3 00



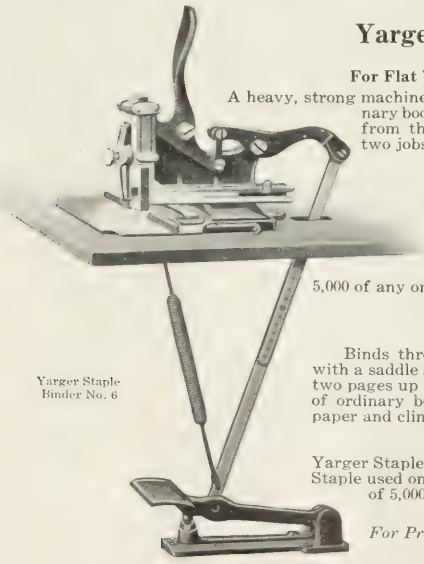
Boston Staple Binder Work Table Extension

Yarger Staple Binder No. 6

(Hercules)

For Flat Work Only—Hand or Treadle Power

A heavy, strong machine, operated by a treadle. It binds from two sheets up to seventy sheets of ordinary book or pamphlet paper. Staples can be inserted three inches from the margin. Country printers will save its cost on one or two jobs, which they usually dispatch to the city, besides avoiding annoying delays. Yarger Staple Binder No. 6 has quick action; binds neatly and securely.



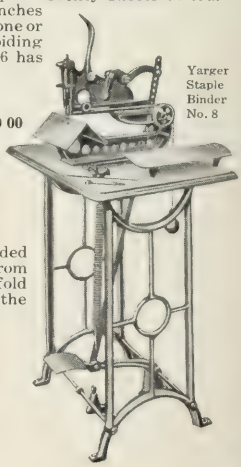
Yarger Staple Binder No. 6

Price of Yarger Staple Binder No. 6

No. 6 Yarger Staple Binder (Hercules) . . . $10 00
The No. 6 Yarger Staple Binder uses the following Staples: F, 3/16-inch; G, 1/4-inch; H, 5/16-inch;—put up in boxes of 5,000 of any one size $0 90

Yarger Staple Binder No. 8

Binds through the fold twelve inches from margin. Provided with a saddle and flat table. It binds pamphlets, calendars, etc., from two pages up to the thickness of one hundred pages through the fold of ordinary book paper. Staples are delivered, driven through the paper and clinched automatically. No adjustments.



Yarger Staple Binder No. 8

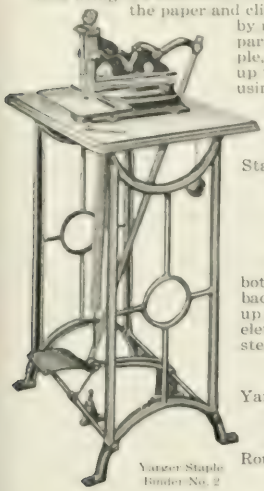
Price of Yarger Staple Binder No. 8

Yarger Staple Binder No. 8 . . . . . $25 00
Staple used on No. 8 Staple Binder: No. 1, 3/16-inch; in boxes of 5,000 90

For Prices and Information regarding Binders' Wire and Wire Staples, see page 1229.

Yarger Staple Binder No. 2

This improved No. 2 Lightning Binder (for flat work only) is a combination of the original No. 1 and No. 2 Binders, one machine now doing the work which formerly required two. Holds two hundred staples at a charge. Staples are delivered and driven through the paper and clinched and can be inserted six inches from margin. There is only one adjustment, by means of a handscrew, which elevates or depresses the clincher. All wearing parts are made of malleable steel to prevent breakage. The action is quick and simple, the work neat and tight. The capacity of this machine is from two sheets up to one hundred and twenty-five sheets of ordinary book or pamphlet paper, using six different sizes of staples from three-sixteenths of an inch to one-half of an inch.



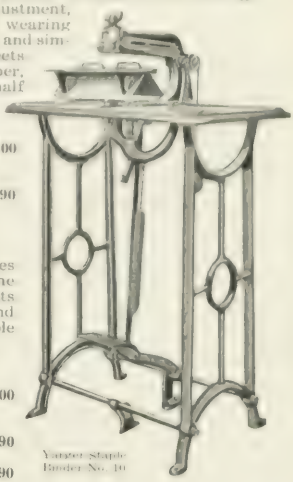
Yarger Staple Binder No. 2

Price of Yarger Staple Binder No. 2

Yarger Staple Binder No. 2 . . . . . $25 00
Staples used on No. 2 Staple Binder: No. 7, 3/16-inch; No. 8, 1/4-inch; No. 9, 5/16-inch; No. 10, 3/8-inch; No. 11, 7/16-inch; No. 12, 1/2-inch, in boxes of 5,000 90

Yarger Staple Binder No. 10

The Yarger Staple Binder No. 10 will use six different sizes of staples both round and flat wire. It will stitch through the fold and through the back from two sheets up to seventy sheets (flat staples) and from two sheets up to thirty sheets (round staples) of ordinary book or pamphlet paper, and eleven inches from margin. The wearing parts are all made of malleable steel and not liable to break or get out of order.



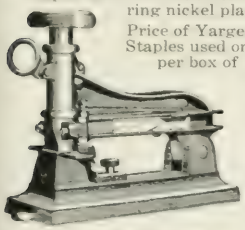
Yarger Staple Binder No. 10

Price of Yarger Staple Binder No. 10

Yarger Staple Binder No. 10 with flat and saddle table $25 00
Flat Wire Staples used in No. 10 Staple Binder: No. 4, 3/16-inch; No. 5, 1/4-inch; No. 6, 5/16-inch; No. 6½, 3/8-inch—per box of 5,000 of one size 90
Round Wire Staples used only in No. 10 Staple Binder: No. 14, 3/16-inch; No. 15, 1/4-inch—per box of 5,000 of one size 90

Yarger Staple Binder No. 4

Binds one to fifty sheets of ordinary paper. Holds one hundred and twenty-five staples at a charge. Does not clog because one staple must be driven before another can enter. Requires no adjustment. Feeds automatically. Machine is japanned. Knob and ring nickel plated.

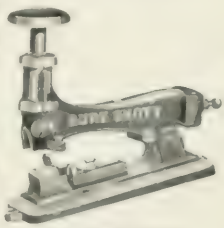


Yarger Staple Binder No. 4

Price of Yarger Staple Binder No. 4 . . . . . $3 00
Staples used on No. 4 Staple Binder: No. L, 3/16-inch; No. M, 1/4-inch and No. N, 5/16-inch—per box of 1,000 of any one size 25
Also No. 4, 3/16 inch; No. 5, 1/4 inch; No. 6, 5/16 inch, per box of 5,000, one size 90

Acme Sure-Shot Binder

The Acme Sure-Shot Binder is one of the strongest binders ever made for office use. It holds one hundred staples at a charge. It binds to one-quarter inch book paper and cannot clog.



Acme Sure-Shot Binder

Price of Sure-Shot Staple Binder $3 00
Staples used on Sure-Shot Staple Binder—No. X, 1/4-inch flat wire; No. XX, 5/16-inch flat wire. Per box of 5,000 of one size 90

Acme Staple Binder No. 4

This machine is the simplest foot-power binder on the market. It uses fine wire staples only. Has both flat and saddle-back tables. Binds up to one-fourth inch book paper. No adjusting. Can not clog. Shipped ready for work.

Price of Acme Staple Binder No. 4 . . . . . $21 00
Staples used in No. 4 Acme Staple Binder: No. 21, 1/4-inch fine wire; No. 22, 5/16-inch fine wire—per box of 5,000 of one size . . . 90

Acme Staple Binder No. 6

The Acme Staple Binder No. 6 is the most complete staple binder sold. Uses both fine and coarse wire staples. Binds to one-fourth of an inch all kinds paper. Has automatic clinching device. Cannot clog. Has both flat and saddle-back tables. No adjustment required at all. Shipped ready for work.

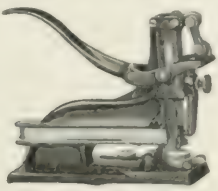
Acme Staple Binder No. 6

Price of Acme Staple Binder No. 6

Acme Staple Binder No. 6 . . . . . $27 00
Staples used in No. 6 Acme Staple Binder: No. 21, 1/4-inch fine wire; No. 22, 5/16-inch fine wire; No. 23, 1/4-inch coarse flat wire; No. 24, 5/16-inch coarse flat wire—per box of 5,000 of one size 90

Acme Staple Binder No. 1

The Acme Binder No. 1 is one of the strongest small binders made. The frame swings on a pivot and lifts high enough to give ample room for putting in and taking out the work. It holds one hundred staples and will not clog. It uses coarse wire staples and binds to one-quarter inch. It is just what is wanted in the small printing office.



Breech Loader Staple Binder

Price of Acme Staple Binder No. 1 . . . . . $6 00
Staples used; No. X, 1/4-inch coarse flat wire; No. XX, 5/16-inch coarse flat wire. Per box of 5,000 of one size $0 90

Acme Staple Binder No. 1

Breech Loader Staple Binder

The Breech Loader Staple Binder is a very useful machine for large or small offices, as it has a great variety of uses. It will bind paper or pamphlets from one to fifty sheets with wire staples. Holds one hundred staples at a charge.

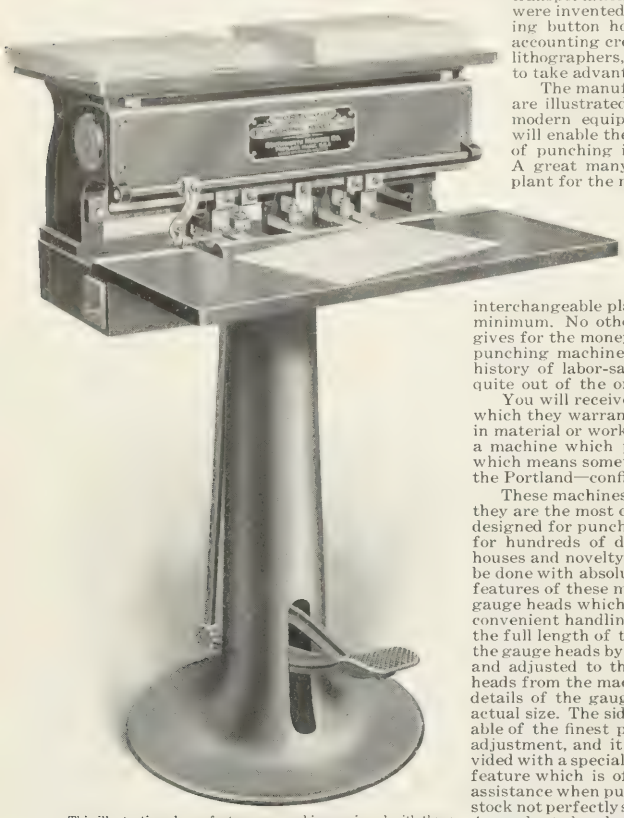
Price of Breech Loader Staple Binder $3 00
Staples used in Breech Loader Binder No. 5; C, 3/16-inch. D, 1/4-inch. E, 5/16-inch. Per box of 1,000 25

For Prices and Information regarding Binders' Wire and Wire Staples see page 1229

Portland Multiple Punching Machines

During the past few years there has been a tremendous increase in the demand for loose leaf and card index records of all kinds. These new systems have so many advantages over the old methods that they are being universally adopted by banking, mercantile, transportation and manufacturing concerns. Multiple punching machines were invented nearly fifty years ago, being originally designed for punching button holes in paper collars, but the new systems for records and accounting created a demand for a machine which would enable printers, lithographers, bookbinders, manufacturing stationers and specialty houses to take advantage of the opportunities offered in this new field.

The manufacturers of the Portland Multiple Punching Machines, which are illustrated on this page, have realized that modern methods call for modern equipment, consequently they have designed a machine which will enable the printing and kindred trades to do every conceivable kind of punching in the most economical and satisfactory manner possible. A great many thousand dollars have been spent in the equipment of a plant for the manufacture of the Portland Multiple Punching Machines in large quantities. A painstaking exactness is exercised every hour by every branch of a highly skillful organization. Nothing but the best material is used in the construction of the Portland. Every part is made on the interchangeable plan, which means that any one of the thousands of Portlands will be interchangeable in its parts with any other Portland of the same type. By making the parts on the interchangeable plan, perfect alignment is obtained and friction is reduced to a minimum. No other punching machine can begin to give what the Portland gives for the money. When you invest in a Portland you not only get the best punching machine on the market at a price which is without parallel in the history of labor-saving machines, but you get something in addition which is quite out of the ordinary.



This illustration shows foot power machine equipped with three round hole punch heads with Punching Sets No. 375. The Punch heads are not included in price of machine, as no two users are likely to require exactly the same equipment.

You will receive with the machine a guarantee from the manufacturers in which they warrant the machine for one year to be absolutely free from defects in material or workmanship, and they will replace, free of charge, any part of a machine which proves defective in any such respect. This is a guarantee which means something. We have absolute confidence in the manufacturers of the Portland—confidence born of years of satisfactory dealings with them.

These machines are remarkable for a great many reasons. In the first place they are the most convenient and accurate punching machines made. They are designed for punching all kinds of round holes, open holes and irregular shapes for hundreds of different purposes. They are extensively used by specialty houses and novelty manufacturers because an endless variety of punching can be done with absolute accuracy and great rapidity. One of the most remarkable features of these machines is the perfect system of gauges. It consists of two gauge heads which can be placed in any desired position in the machine for the convenient handling of any size sheet, and a side gauge which allows the use of the full length of the thirty-inch table. The back gauges, which are movable in the gauge heads by means of the thumb screws, can be set in any desired position and adjusted to the hundredth part of an inch without removing the gauge heads from the machine. The illustration near the bottom of this page shows the details of the gauge head one-quarter actual size. The side gauge is also capable of the finest possible adjustment, and it is provided with a special swivel feature which is of great assistance when punching stock not perfectly square. A graduated rule, thirty inches long, is inlaid in the table close to the front of the punch heads, thus enabling the operator to correctly locate the punch heads in the desired position. Any number of holes can be punched at each operation up to the full capacity of the machine. In other words it is possible to punch a row of holes twenty-four inches long in a sheet of stock thirty inches in length, or holes may be punched any distance apart up to the maximum distance of twenty-four inches from center to center. It is safe to say that the system of gauges provided with the Portland will enable the operator to make ready for a job of punching, either simple or difficult, in a fraction of the time usually required by other punching machines. There is a drawer under the punches running the entire length of the machine, into which the paper punchings drop, preventing litter around the machine.

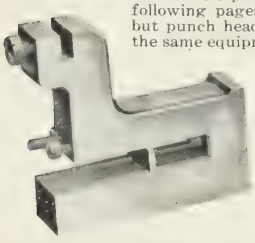


Illustration showing details of gauge head, one-quarter actual size

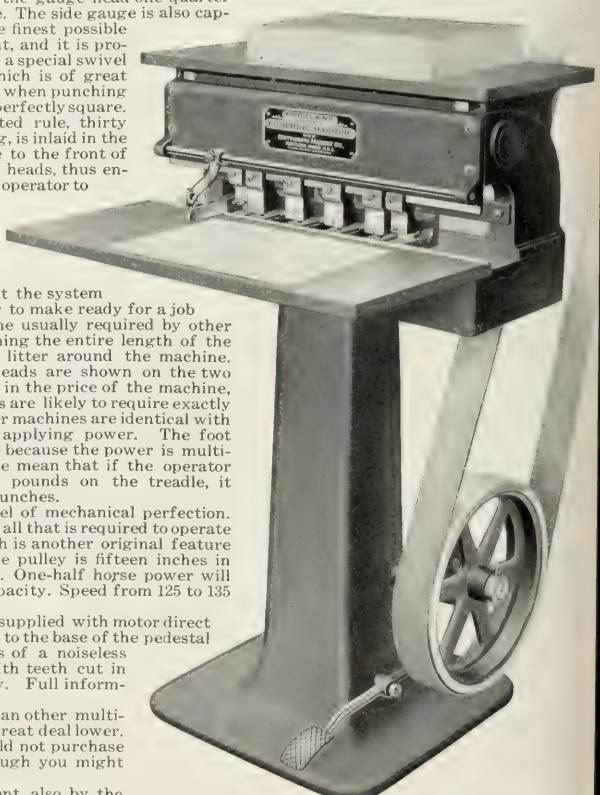
Round hole punch heads and open hole punch heads are shown on the two following pages. The gauge heads are included in the price of the machine, but punch heads are not included, as no two users are likely to require exactly the same equipment. The foot power and power machines are identical with the exception of the method of applying power. The foot power machine is easy to operate because the power is multiplied sixteen times. By this we mean that if the operator should exert a pressure of 100 pounds on the treadle, it would equal 1600 pounds on the punches.

The power machine is a marvel of mechanical perfection. A slight pressure on the treadle is all that is required to operate the noiseless power clutch which is another original feature of this remarkable machine. The pulley is fifteen inches in diameter with a three-inch face. One-half horse power will operate the machine to its full capacity. Speed from 125 to 135 revolutions per minute.

The power machines can be supplied with motor direct connected. The motor is attached to the base of the pedestal and power transmitted by means of a noiseless pinion which engages directly with teeth cut in the rim of the fly wheel which takes the place of the pulley. Full information and prices on application.

Not only is the first cost of the Portland very much less than other multiple punching machines, but the price for punch heads is also a great deal lower. The punch heads are shown on the next two pages. You could not purchase a better multiple punching machine than the Portland, although you might pay twice as much for it.

These machines are in use by the United States Government, also by the largest corporations in the country, such as the Standard Oil Company, United States Steel Corporation and General Electric Company, but our records show that the great majority of the first thousand Portlands were sold to printers and bookbinders. Some of these concerns are quite small, but they are enterprising and have found the Portland to be a great money-earner.



This illustration shows power machine equipped with four open hole Punch Heads Style M1. Punch heads are not included in the price of machine, as no two users are likely to require exactly the same equipment.

Portland Multiple Punching Machine, foot power, shipping weight 480 pounds. Price $60 00
Portland Multiple Punching Machine, power, shipping weight 600 pounds. Price 90 00

Send for pamphlet giving complete information regarding the Portland Multiple Punching Machines.

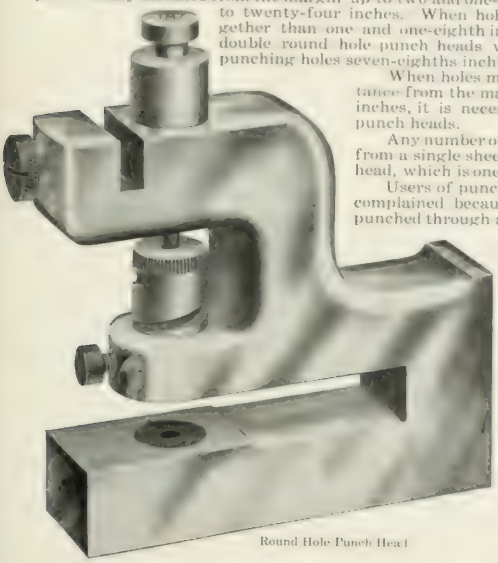
Round Hole Punch Heads and Punching Sets for the Portland

This illustration shows a round hole punch head with punching set. The illustration is one-half actual size. Holes may be punched any distance from the margin up to two and one-quarter inches, and any distance apart from one and one-eighth inches up to twenty-four inches. When holes must be punched closer together than one and one-eighth inches it is necessary to use the double round hole punch heads which are generally made for punching holes seven-eighths inch from center to center.

When holes must be punched a greater distance from the margin than two and one-quarter inches, it is necessary to use the deep throat punch heads.

Any number of sheets of stock can be punched from a single sheet up to the full capacity of the head, which is one-half inch of stock.

Users of punching machines have sometimes complained because smooth holes could not be punched through a thick pile of stock. Attention is called to the fact that holes with smooth edges are not possible when a large amount of stock is punched at a single operation, for the reason that the punch does not cut each individual sheet, consequently the round discs of paper, which are of a yielding nature, will be forced down through the pile of stock ahead of the punch into the die, leaving a ragged hole. The sheets at the top and bottom of a thick pile will have smooth holes, but those in the middle of the pile will necessarily have rough holes.



Round Hole Punch Head

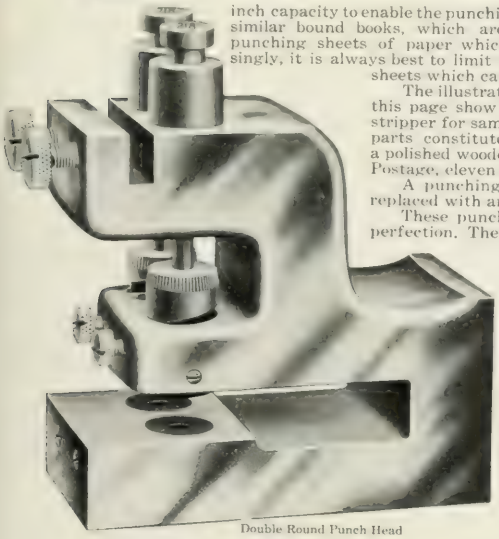
The round hole punch heads are made with a half-inch capacity to enable the punching of telephone directories and similar bound books, which are to be hung up; but when punching sheets of paper which are afterwards to be used singly, it is always best to limit the quantity to the number of sheets which can be punched satisfactorily.

The illustrations on the right hand side of this page show a No. 250 punch with die and stripper for same. (Actual size). These three parts constitute a punching set. The set complete is packed in a polished wooden box. Price, **$2.00** for any of the fourteen sizes. Postage, eleven cents.

A punching set can be removed from the punch head and replaced with another size in less than one minute.

These punches, dies and strippers are marvels of mechanical perfection. The stripper, through which the punch passes, insures absolute alignment of the punch and prevents the die and punch from wearing. The stripper, which is made with a spiral groove, is raised or lowered by revolving in order to accommodate the different amounts of stock to be punched.

These Punching Sets are made in the most perfect manner possible by means of specially designed equipment. The finest steel is used and each part carefully hardened by experts and then ground with diamond dust and the finest corundum. There are twenty-seven operations required for the completion of a punching set. Before shipment every punch, die and stripper is carefully tested by means of micrometer gauges, and then assembled in a special testing head to prove accuracy of alignment. If a variation of as much as a thousandth of an inch is detected the part is discarded.



Double Round Punch Head

All of these painstaking methods result in the production of punching sets which are as accurate and wear-resisting as human ingenuity can devise.

A complete stock of all sizes of punching sets is always kept on hand ready for immediate shipment. All punching sets and punch heads, shown on this page, are made for interchangeable use. Punching sets are never included in the price of the punch head.

The fourteen sizes of punches for the round hole punch heads are shown by this diagram. They are graduated by thirty-seconds beginning with three thirty-seconds which is No. 093. The number of the punch indicates the size in thousands of an inch, i. e., No. 250 is a quarter-inch, No. 500 is a half-inch.

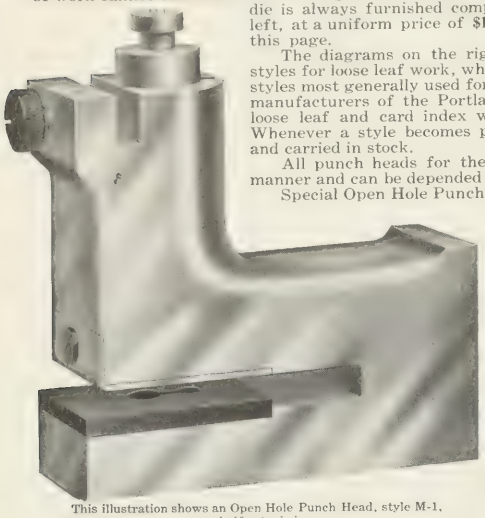
Open Hole Punch Heads for the Portland

Open Hole Punch Heads are used for an endless variety of loose leaf and card index punching. Punches and dies for this class of work cannot be made for interchangeable use, and for this reason the punch head with the required shape or style of punch and die is always furnished complete, as shown in the illustration at the left, at a uniform price of **$10.00** for any of the five styles shown on this page.



This illustration shows an Open Hole Punch Head, style M-1, one-half actual size

Price **$10 00**

The diagrams on the right illustrate three of the most popular styles for loose leaf work, while the diagrams on the left illustrate the styles most generally used for card index work. From time to time the manufacturers of the Portland will standardize additional styles for loose leaf and card index work, as well as for baggage checks, etc. Whenever a style becomes popular or uniform it will be standardized and carried in stock.

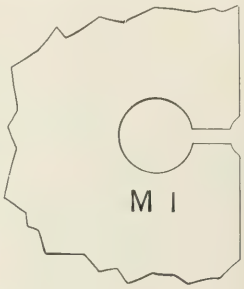
All punch heads for the Portland are made in the finest possible manner and can be depended upon to give perfect results.

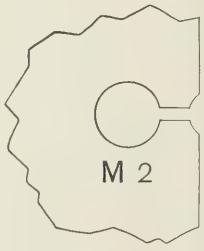
Special Open Hole Punch Heads and other shapes not standardized by the manufacturers of the Portland can be made to order promptly. Prices will be quoted on application.

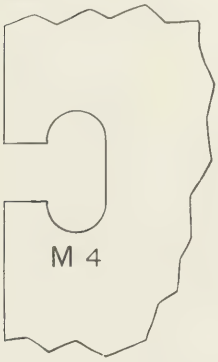
Regular Open Hole Punch Heads can be spaced any distance apart from one and nine-sixteenths inches to twenty-four inches.

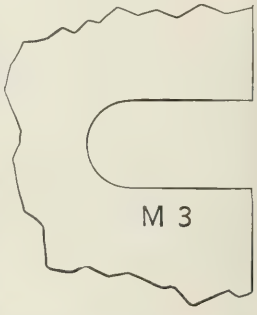
Open Hole Punch Heads are usually made with one-quarter inch capacity, to enable the operator to insert the sheets of stock readily, but it is not possible to punch holes with smooth edges when a large number of sheets are punched at a single operation, as the punch does not cut each individual sheet, consequently the paper or cardboard punchings, which are of a yielding nature, will be forced down through the pile of stock ahead of the punch into the die, leaving a ragged hole.

The best loose leaf and card index manufacturers always limit the quantity of stock punched at each operation to the number of sheets which can be punched satisfactorily.









Tab Cutting Attachment

The rapidly increasing use of sub-division cards, etc., has created a demand for a tab cutting attachment for the Portland.

This tab cutting attachment will fill a long felt want for a reliable equipment for the production of tab-cards and similar work. Hundreds of different styles of sub-division cards and folders for vertical filing systems, etc., can be handled with great economy and satisfaction. Full information with samples and prices will be furnished on application.

Special Punch Heads

The manufacturers of the Portland are prepared to furnish special punch heads for almost every conceivable purpose.

Some manufacturers of loose leaf goods find that it is of considerable advantage to have gang heads instead of single heads, thus preventing the liability of variation in distance between the holes.

The illustration at the bottom of this page shows a three-gang special head.

Special gang heads are frequently furnished for punching a large number of holes at fixed distances.

A Portland Multiple Punching Machine in the plant of an enterprising concern is sure to be a money-earner, because business which is new and profitable will come to those who are ready for it.

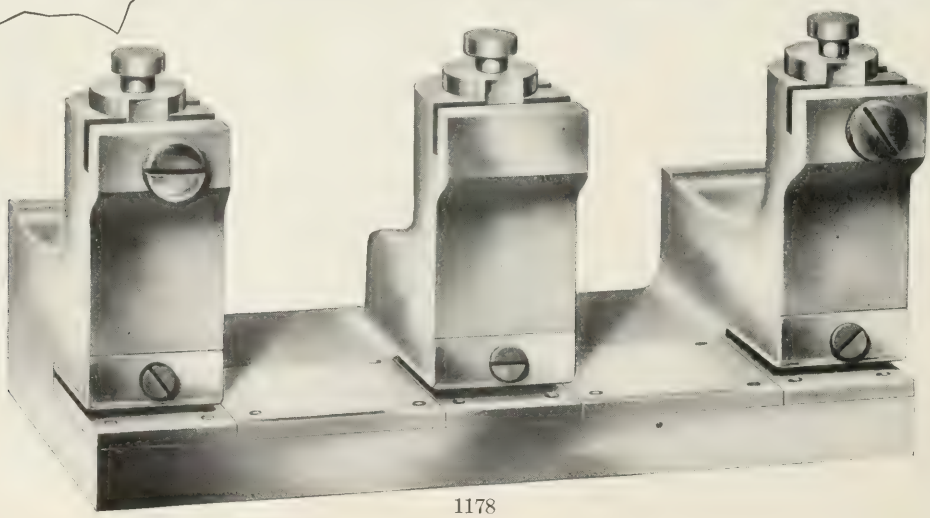
Thin sheet metal can be successfully punched with the Portland, as well as celluloid, fibre and other material.

New fields of usefulness for the Portland are being constantly developed. Special punch heads for punching cards on which cuff links, chains, pins, etc., are mounted can be made to order promptly. Such cards are extensively used by manufacturers of jewelry.

Paper box manufacturers use special heads for cutting odd shaped corners of stock.

Very effective household reminders can be manufactured economically by the use of heads designed for these purposes.

Novelty manufacturers, particularly those houses making goods for the department store trade, have found that the Portland equipped with special punch heads enables them to produce a great variety of attractive articles in the paper and cardboard line.



Southworth Punching Machines

These machines are for punching paper, cardboard, celluloid, thin sheet metal and other material. They are designed for round hole punching only. Irregular shapes, such as open holes for loose leaf sheets, card indexes, etc., cannot be punched with them.

They are the best machines for the money which have ever been put on the market. They are powerful, strong and rapid, and contain exclusive features which merely have to be seen to be appreciated. The method of changing the punching set is only one of the many reasons for the great popularity of these machines. The change can be made from one size to another in less than one minute without the use of any tools. The gauges are exceedingly convenient and accurate. Adjustments can be made to a hundredth part of an inch, and holes can be punched at any distance from margin up to four inches. There is a drawer in the base of the machine under table into which the paper punchings drop, preventing litter around machine. A graduated rule eighteen inches long is inlaid in the table. This rule also illustrates the fourteen sizes of punching sets. Any number of sheets of stock can be punched from a single sheet of paper up to the full capacity of the machine which is one-half inch of stock. Users of punching machines have sometimes complained because smooth holes could not be punched through a thick pile of stock. Attention is called to the fact that holes with smooth edges are not possible when a large amount of stock is punched at a single operation, for the reason that the punch does not cut each individual sheet, consequently the round discs of paper, which are of a yielding nature, will be forced down through the pile of stock ahead of the punch into the die, leaving a ragged hole. The sheets at the top and bottom of a thick pile will have smooth holes, but those in the middle of the pile will necessarily have rough holes. The Southworth Punching Machines are made with a half-inch capacity to enable the punching of telephone directories and similar bound books which are to be hung up. When punching sheets of stock, which are afterwards to be used singly, it is always best to limit the quantity to the number of sheets which can be punched satisfactorily. There are no better machines made, regardless of price, for single round hole punching than the Southworth Punching Machines. They are in successful use everywhere.

Southworth Punching Machine
Foot Power

Southworth Punching Machine
Hand Power

The illustrations show the hand power and foot power machines, which are identical, with the exception of method of applying power. The hand power machine is designed for bench use. The foot power machine can be easily moved around the workshop and allows the operator the use of both hands for guiding the stock. Purchasers of hand power machines sometimes ask if it will be possible for them to convert their machine into a foot power machine. As the method of applying power is not the same in the two machines, it is not possible to change a hand power machine into a foot power machine by the addition of the foot power features. The price of either style of machine includes one punching set. (See next page for full description.) The three-sixteenths inch size, which is No. 6, is always sent with the machine unless otherwise directed. Additional sizes of punching sets are $2.00 each.

The Southworth Punching Machines have proven their superiority in manufacturing establishments in all parts of the country. Paper and cardboard mills and selling agents everywhere find the machine indispensable for punching holes in samples of all kinds.

A large number of calendar manufacturers and art publishers use the Southworth for round hole punching; in fact, no printing office, bookbindery or similar concern can any more afford to be without the services of one of these machines than it can afford to be without the telephone or typewriter.

Every printing office and bookbindery is sure to have work which requires the use of a punching machine, and it is therefore necessary that even the smallest plants should be equipped with a machine which will produce the greatest income on the smallest investment. The average country printer has found that the Southworth Punching Machine can be used to great advantage.

The machines are also used extensively for punching library index cards of the styles requiring the round hole only.

Newspaper publishers in every state in the Union have found that it is profitable to have a Southworth Punching Machine in their equipment.

Schools and colleges are also finding these machines to be very convenient and satisfactory.

The transportation companies use the foot power machines quite extensively for punching holes in large quantities of stock which must be fastened together.

Purchasers of Southworth Punching Machines located at some distance from well equipped book binderies have found that they have saved the entire cost of their machine by the elimination of transportation charges on work which would ordinarily have been sent out of town to be punched. The saving in time is also a factor of a great deal of importance.

In establishments depending on girls to operate the machine the foot power machine is always recommended on account of the ease of operation. If the operator exerts a pressure of fifty pounds on the treadle, it would equal eight hundred pounds on the punch, because the power is multiplied sixteen times.

As the foot power machine costs only twelve dollars more than the hand power machine it is generally preferred because a larger amount of work can be punched with greater ease than with the hand machine.

The demand for Southworth Punching Machines from foreign countries has been surprising. When the machines were shown for the first time to the supply houses in England they ordered more than one hundred of them during the first week and more orders are constantly being received.

Any size punching set can be supplied from three thirty-seconds to one-half inch in diameter. Note the diagram of sizes below.

The fourteen sizes of punching sets are shown by above diagram. They are graduated by thirty-seconds beginning with three-thirty-seconds which is No. 3. The number of the punching set indicates the size, *i. e.*, No. 5 is five-thirty-seconds; No. 16, sixteen-thirty-seconds or one-half inch.

Southworth Punching Machine, Hand Power, shipping weight 75 pounds. Price **$18 00**
Southworth Punching Machine, Foot Power, shipping weight 175 pounds. Price **30 00**

Punching Sets for the Southworth Punching Machines

The illustrations on the left hand side of this page show a No. 8 Punch with die and stripper for same. (Actual size.) These three parts constitute a punching set. The set complete is packed in a polished wooden box. Price **$2.00** for any of the fourteen sizes. Postage eleven cents. (See diagram of sizes on preceding page.) These punches, dies and strippers are marvels of mechanical perfection. The stripper, through which the punch passes, insures absolute alignment of the punch and prevents the punch and die from wearing. The stripper, which is made with a spiral groove, is raised or lowered by revolving, in order to accommodate the different amounts of stock to be punched.

These punching sets are made in the most perfect manner possible by means of specially designed equipment. The finest steel is used and each part carefully hardened by experts and then ground with diamond dust and the finest corundum. There are thirty operations required for the completion of a punching set. Before shipment, every punch, die and stripper is carefully tested by means of micrometer gauges, and then assembled in a special testing machine to prove accuracy of alignment. If a variation of as much as a thousandth of an inch is detected the part is discarded.

All of these painstaking methods result in the production of punching sets which are as accurate and wear-resisting as human ingenuity can devise. A complete stock of all sizes of punching sets is always kept on hand ready for immediate shipment.

Eyeletting Sets for the Southworth Punching Machines

Almost every owner of a Southworth Punching Machine has an occasional job of eyeletting to be done. It is needless to purchase an expensive self-feeding eyeletting machine unless you have considerable of this class of work, because eyeletting can be done with the Southworth Punching Machines in a satisfactory and economical manner.

The process is very simple. First the stock is punched with the required size of punching set and the eyelets are then clinched with the corresponding size of eyeletting set. The punch, die and stripper can be taken out of machine and the eyeletting set put in its place in less than one minute.

The illustrations on the right hand side of this page show a No. P6 Clincher with anvil and stripper for same. (Actual size.) These three parts constitute an eyeletting set. The set complete is packed in a polished wooden box. Price **$2.00** for any of the five sizes. Postage eleven cents.

The sizes are as follows: P4, P6, P8, P10, P12.

The eyeletting sets are made in the best possible manner. The stripper or guide supports the clincher insuring absolute alignment with the anvil. The description, together with the illustration of the brass eyelets shown above, clearly explains the proper size of eyeletting set for clinching the corresponding styles of eyelets.

Tatum Paper Drill

The Tatum Paper Drill, with adjustable table, is a great time saver. The table is readily adjustable, and by the use of adjustable stops in front and with convenient gauges, the work is easily controlled, so that any desired distance between centers, from one-half inch to twelve inches, is quickly secured. The projecting handle of the sliding table is provided with a spring catch which engages these adjustable stops wherever they are placed. The gauges on the table also provide easy adjustments from edges to sheets. A very important feature is the clamping device which is operated by the foot, thus leaving both hands free to control the work.

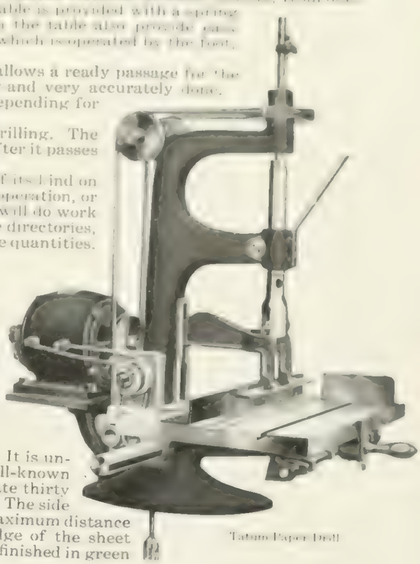
The drills are hollow, a feature which avoids "choking," as the clearance inside allows a ready passage for the refuse. The holes produced are clean all the way through, and the work is very rapidly and very accurately done.

The holes may be the depth of one sheet or two inches in thickness if desired, depending for maximum thickness upon the size of the holes.

The gauge at the top of the spindle regulates very precisely the depth of the drilling. The wooden backing strip in the table is adjustable, and receives the cutting edge of drill after it passes through the paper.

The Tatum Paper Drill, with adjustable table, is undoubtedly the best machine of its kind on the market. For excessively thick work beyond the capacity of an ordinary punching operation, or for holes far from edge of sheet, the Tatum Paper Drill will be found invaluable and will do work not heretofore done satisfactorily. It is especially adapted for railroad tariffs, telephone directories, order blanks, calendar cards and work on which the holds are punched or drilled in large quantities.

Send for circular completely describing the machine and its capacity.



Tatum Paper Drill

Prices of Tatum Paper Drills

No. 43 B. Paper Drilling Machine, belt drive, with universal chuck and one one-quarter inch hollow drill	$150 00
No. 43 M. Paper Drilling Machine, with direct current motor 110 or 120 volts, one-quarter H. P. and supporting bracket, attached as shown in illustration	180 00
No. 43 M. Paper Drilling Machine, with alternating current motor, 110 or 120 volts, 60 cycles, single phase	200 00

The "Marvel" Punch

The "Marvel" Punch is the most effective low priced paper punch on the market. It is unusually simple in construction and may be truly called "a Marvel." It operates on the well-known Arbor rack and pinion principle and will easily perforate thirty sheets of ordinary sixteen-pound folio paper at a time. The side gauge is adjustable to any desired margin, while the maximum distance from the center of the holes to the binding edge of the sheet is one-half inch. The machine is handsomely finished in green with nickel-plated trimmings.

The "Marvel" Punch

Prices of The "Marvel" Punch

No. 60 "Marvel" Punch, punches two holes ¼-inch in diameter (for three-sixteenths inch posts) 2¾ inches center to center, each	$1 25
No. 63 "Marvel" Punch, punches two holes ¼-inch in diameter (for three-sixteenth inch posts) 4¼ inches center to center, each	2 00

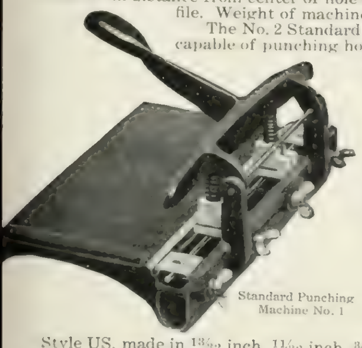
Special prices will be quoted on heads other than standard. Send for circular giving other sizes and complete details.

Standard Punching Machines

The No. 1 Standard Punch will punch holes any distance apart from one-half inch to ten and one-fourth inches on any size sheet. Maximum distance from center of hole to edge of sheet is five-eighths inch. Punches are easily removed, and sharpened with a round file. Weight of machine with two heads, eight pounds.

The No. 2 Standard Punch is similar in construction to the No. 1, but it is larger, heavier and stronger; it is capable of punching holes any distance apart up to 14¾ inches in any length of sheet; Takes the same Punch Heads as No. 1. Weight, twenty pounds.

We have sold a great many of them, and they invariably give satisfaction. The Standard is a handy machine for small jobs of punching and it soon pays for itself. We shall be pleased to supply you with any additional information regarding this line of punches.



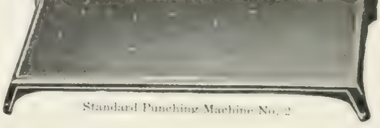
Standard Punching Machine No. 1

Prices and Dimensions of Standard Punching Machines Nos. 1 and 2 and Punch Heads

Standard Punch No. 1 (without punches)	$ 6 00
Standard Punch No. 2 (without punches)	14 00
Style U Punch Heads, for punching single round holes. Made in 1/8 inch, 3/16 inch, 7/32 inch, ¼ inch, 5/16 inch, 3/8 inch, 11/32 inch, 13/32 inch	1 70
Style DU Double Round Hole Punch Heads, made in 7/32 inch	4 00
Style CU Punch Head. A combination Punch Head capable of punching five different sizes of round Holes as follows: 1/8 inch, 3/16 inch, 7/32 inch, ¼ inch, and 3/8 inch. Fitted with five punches, four of which may be removed, leaving the proper size punch in the die for punching. Price, complete	$ 8 00
Styles 13U and 15U Slotted Hole, price each	20 00
Style US, made in 13/32 inch, 11/32 inch, 3/8 inch for punching round holes, slotted for loose leaf work	6 75

Will punch holes any distance apart from ½ inch to 10¼ inches on any size sheet. Maximum distance from center of hole to edge of sheet is 5/8 inch. Punches are easily removed, and sharpened with a round file. Weight of machine with two heads, eight pounds.

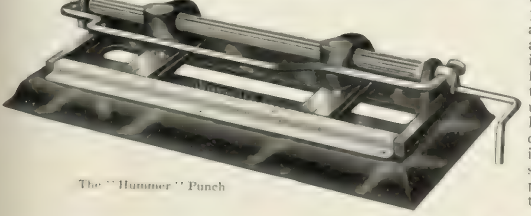
If you have any problems in the line of punching loose leaf work send us samples stating amount of work to be done, and we will gladly recommend the machine best adapted to your needs.



Standard Punching Machine No. 2

The "Hummer" Punch

The "Hummer" Punch is an adjustable punch for either round or slotted holes, and satisfies a most pressing demand for a combination adjustable office punch of high quality moderately priced. The "Hummer" Punch is made unusually strong and operates with ease. While it will be found a great convenience in the printing office for punching small jobs quickly, it is more particularly adapted for the counting room or business office. The "Hummer" is adjustable to any distance between centers from three-quarters of an inch minimum to seven and one-eighth inches maximum. It can be fitted with extra heads for punching three or more holes at one operation. The side gauge is adjustable to any desired margin and may be used on either side. The maximum distance from center of holes to binding edge of sheet is one-half inch for round holes and five-eighths of an inch for slotted holes. The base of the "Hummer" is of solid iron, four and one-half by nine and three-quarter inches, and is handsomely finished in oxidized copper, and the trimmings are nickel plated. The large demand for loose sheets in the modern filing systems makes this machine desirable for any printer.



The "Hummer" Punch

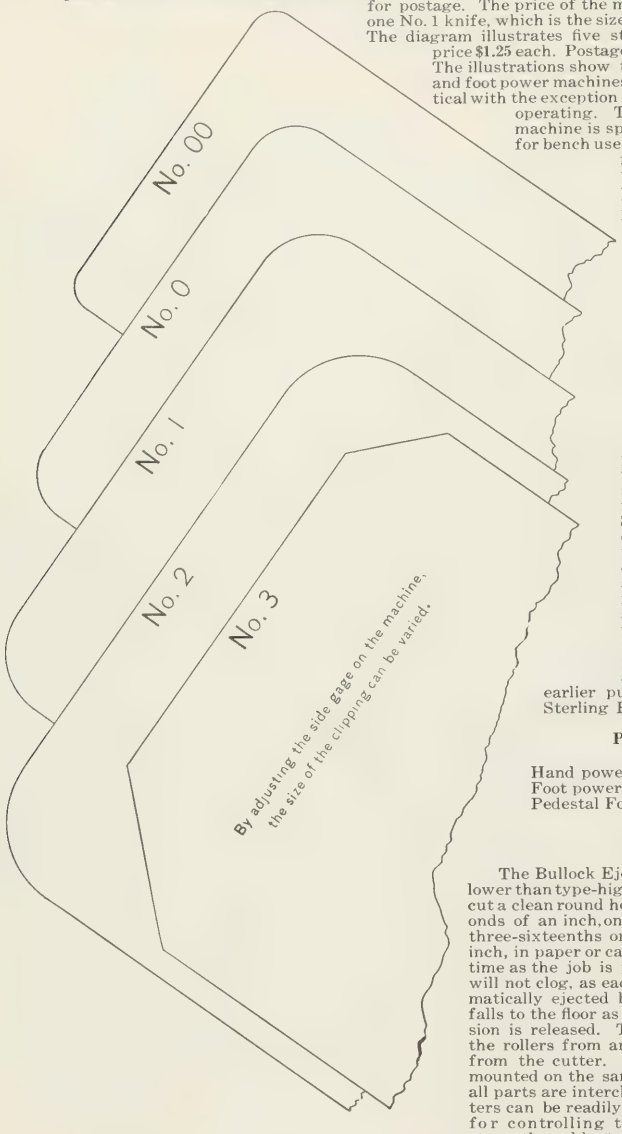
Prices of The "Hummer" Punch

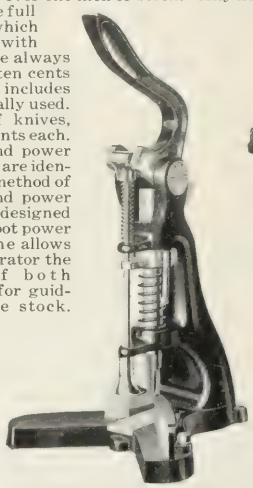
No. 70, "Hummer" Punch, two round holes, each	$5 00
No. 83, "Hummer" Punch, two slotted holes, each	9 00
Extra Heads, 9/64 and ½-inch, round holes, each	$1 00
Extra Heads, standard sizes, slotted holes, each	3 00

Special prices will be quoted on heads other than standard. Send for circular giving other sizes and complete details.

Sterling Round Cornering Machines

These machines are for round cornering booklets, catalogues, cards of all kinds, labels, folders, calendar backs and an endless variety of other work. The Sterling is the most popular round cornering machine ever devised. Over eight thousand of these machines have already been sold to printers, bookbinders and kindred trades in every civilized country in the world. The machine is self-clamping and very rapid. Every part is made with the utmost care, and nothing but the very best material is used in its construction. The operation of the Sterling is so simple and the price so low, that no enterprising concern can afford to get along without one of these wonderful machines. Round corners add to the appearance of a great many different kinds of work, and in many instances they are absolute necessities. The actual cost of round cornering is only a trifle. The capacity of the machine is a little over one inch of stock. Any number of sheets can be cornered with the greatest ease, from a single sheet up to the full capacity of the machine. The knife cuts onto a block of end grain hardwood, which is held in position by means of a spring. Four cutting blocks are included with each machine. Extra cutting blocks are 35 cents per dozen. These blocks are always packed in boxes containing one dozen, which can be sent by mail at a cost of ten cents for postage. The price of the machine includes one No. 1 knife, which is the size generally used. The diagram illustrates five styles of knives, price $1.25 each. Postage five cents each. The illustrations show the hand power and foot power machines which are identical with the exception of the method of operating. The hand power machine is specially designed for bench use. The foot power machine allows the operator the use of both hands for guiding the stock.





Sterling Round Cornering Machine
Hand Power

Sterling Round Cornering Machine
Foot Power

The fact that the foot power machine can be easily moved around the workshop is a valuable feature in many plants. As the Sterling machines are built on the interchangeable plan, the hand power machine may be converted into a foot power machine in a few minutes' time by the addition of the pedestal foot power attachment. Several thousand pedestal foot power attachments have already been sold to the earlier purchasers of hand power Sterling Round Cornering Machines.

Prices of Sterling Round Cornering Machines

	Shipping Weight	List Price
Hand power	35 pounds	$15 00
Foot power	160 pounds	30 00
Pedestal Foot Power Attachment	136 pounds	15 00

Bullock Ejector Press Punch

The Bullock Ejector Press Punch is a useful device, which is made two points lower than type-high. One or more of them can be locked up in a type form and will cut a clean round hole three-thirty-seconds of an inch, one-eighth of an inch, three-sixteenths or one-quarter of an inch, in paper or card stock at the same time as the job is printed. The Punch will not clog, as each piece cut is automatically ejected by the plunger and falls to the floor as soon as the impression is released. The ejector protects the rollers from any danger of injury from the cutter. The cutters are all mounted on the same size body and as all parts are interchangeable, new cutters can be readily fitted. The spring for controlling the ejector can be strengthened by turning the screw at the bottom.

Bullock Ejector Press Punch

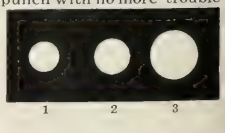
Prices of Bullock Ejector Press Punches

Punch for 3/32, 1/8, 3/16 or 1/4-inch on bases 7/16-inch square, each					$0 75
Punch for 5/16 or 3/8-inch, on bases 9/16-inch square, each					1 25
Extra Cutters, small	$0 35	large	$0 60	Extra Plungers, small	$0 10 large 20
Extra Screw, small	10			Extra Cutting Plate, dozen, small	10 large 10
Extra Square Base, small	20; large		40	Extra Springs, small	05 large 05

The Dillingham Punch

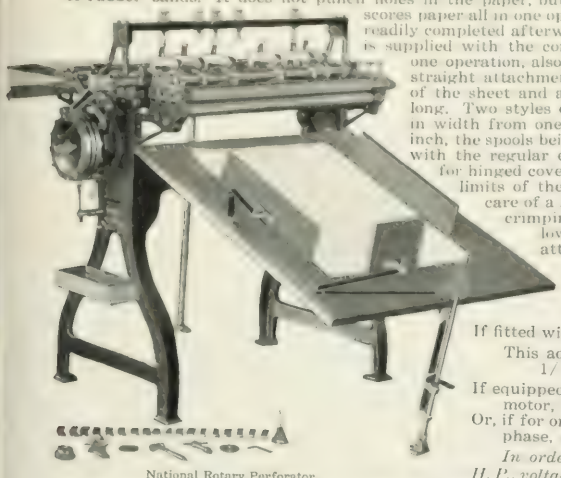
The Dillingham Press Punch is secured to the tympan of Platen presses in practically the same manner as a feed guide. The slightly curved spring as shown in the illustration is placed under the upper tympan sheet and the sheet to be punched is fed over this curved spring and under the punch with no more trouble than in feeding to gauge pins. The punch is secured to the tympan with paste or glue. If so desired several punches can be used on a sheet and the printing and punching done at the same time. It is made to punch holes five-thirty-seconds, three-sixteenths and one-quarter inch. State size of hole wanted when ordering. This is an extremely useful device for any printer, and is thoroughly effective in operation. Price, each, $1.25.

The Dillingham Punch



The National Rotary Perforator

The National Rotary Perforator is designed to fulfill all the requirements of an up-to-date perforating machine. It has no tapes or rubber bands. It does not punch holes in the paper, but makes a clean cut, leaving no burr. It perforates, cuts or trims and scores paper all in one operation. If desired, the paper can be perforated first and the printing readily completed afterwards. The speed is limited only by the expertness of the operator. It is supplied with the combination attachment for stub (or strike) and straight perforation at one operation, also with crimping-scoring-slitting-trimming-attachment. The stub and straight attachment enables a straight line of perforation to be made the entire length of the sheet and at the same time striking as desired on stock not over thirty-six inches long. Two styles of crimping may be obtained, as ordered, one eight crimps to the inch, in width from one-eighth to one and three-quarter inches, or twenty-five crimps to the inch, the spools being one and one-half inches wide. Only one set of spools is furnished with the regular equipment. The scoring spools can be adjusted for single scoring or for hinged cover work from one-eighth of an inch up to any width desired within the limits of the machine. The National Rotary Perforator, thus equipped, will take care of a large variety of work, and will effect an economy in floor space. The crimping attachment can be furnished as an independent machine. The following prices are for machines fitted with combination and crimping attachment.



National Rotary Perforator

Prices of the National Rotary Perforators

National Perforator, with 24-inch standard equipment	$345 00
National Perforator, with 28-inch standard equipment	405 00
National Perforator, with 30-inch standard equipment	460 00
If fitted with special Micrometer adjustment, extra	30 00

This adjustment permits the setting of crimper spools to a reading of 1/1000 inch and assures a perfect crimp on any weight stock.

If equipped for self-contained individual motor drive with direct current motor, 110-220 volts, single phase, add	30 00
Or, if for one-quarter H. P., alternating current motor, 110-220 volts, single phase, add	65 00

In ordering motors, give voltage. Prices will be quoted on motors of other H. P., voltage and phase.

National Rotary Perforator, without Combination and Crimping Attachment

20-inch National Rotary Perforator, fitted with 3 Heads	$200 00	28-inch National Rotary Perforator, fitted with 5 Heads	$300 00
24-inch National Rotary Perforator, fitted with 4 Heads	250 00	30-inch National Rotary Perforator, fitted with 6 Heads	350 00

Tatum Perforators for Round Holes

In the design of the Tatum Perforators, especial attention has been given to the proper distribution of the metal. This is notably the case with our arch or top member, which is very much heavier than usually made. This unusual stiffness of the arch or top member, with other features named, makes perfect perforating and unusual durability. Our total weights of various styles are from forty to sixty per cent. heavier than those of other manufacturers. This fact, in connection with the design and the high character of our workmanship and material, is bringing us orders from the most discriminating buyers. Perfect alignment is necessary for really good work in any perforator. The studs upon which our heads slide are long, of large diameter and in direct line with the needles. These guiding studs have double the bearing surface of other makes and being without any strain of supporting the top feed table, a perfectly true and even action of the needles is thus ensured.

Two of the weak points of perforators are the tempered needles and die plate. Realizing this, the manufacturers have put in special machines and furnaces to handle and temper these important parts, to secure even and uniform results. This, combined with careful and experienced workmanship, enables them to make perforators which will not wear out in a short time, but will continue to make good, clean, round perforations for years. Both needles and die plate are hardened, and a special hard temper is given the die plate, as then the needles are more easily replaced.

The Tatum Perforators have been in use more than eight years, and the manufacturers have never replaced a single die plate. The strippers on our perforators are made of steel and are so supported that they cannot "give" in the center. Being rigid their entire length, the work is always stripped in a perfect manner, no oval or ragged holes appearing in the center of the sheets, as in other makes where the strippers are not properly constructed or secured. The sectional adjustment length of perforations is amply provided for. The backing pieces which give action to the needles are cut into convenient divisions, which are easily adjusted. The removal of needles is quickly accomplished. One needle or one hundred can be readily removed or replaced without disturbing the others. A waste box to catch perforations is provided; is easily emptied and replaced. The Tatum Perforators are finished beautifully in smooth black ornamented in gold. Tables are of golden oak, "built up," and will not warp. A broad guarantee covers the Tatum Perforators.

Write for descriptive circular of full line of Tatum Perforators.

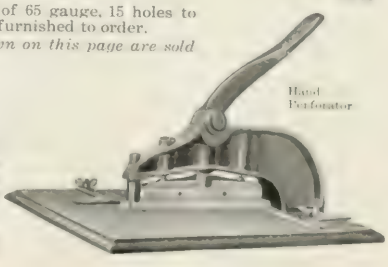
Perforators fitted with needles of 65 gauge, 15 holes to the inch. Needles 18 holes to inch furnished to order.

The Perforating Machines shown on this page are sold f. o. b. factory.

Hand Perforator

This is a first-class Hand Perforator, intended for small work. Printers requiring a machine for doing little jobs which would otherwise have to go to the bindery will find these Hand Perforators entirely satisfactory and very economical. These machines make fifteen round hole perforations to the inch and when needles are bent or broken they can readily be taken out and replaced. If your work does not call for more than a machine of this capacity you will make no mistake in adding one to your equipment. Correspondence invited regarding Perforating Machines.

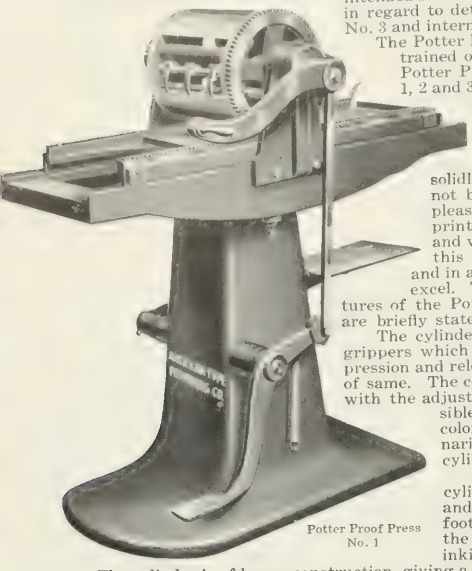
Price $35 00



Hand Perforator

The Potter Proof Presses

The complete line of Potter Proof Presses shows an innovation in proof press construction. In the busy printing office some one of these machines is essential. The Potter line offers a machine for nearly every purpose. Beginning with the No. 0 machine, intended for the smaller offices and selling at a much less price, the same careful consideration in regard to details of construction and manufacture has been accorded to it as to the large No. 3 and intermediate models.



Potter Proof Press No. 1

The Potter Proof Press simplifies the whole proofing problem and enables anyone, whether trained or not in proof taking, to obtain the very best results in the briefest time. The Potter Proof Presses are built on the lines of cylinder presses. The cylinders on Nos. 1, 2 and 3 are fitted with grippers, have steel rods to hold the draw sheets and are provided with trips for use when it is desired to throw the cylinder off the impression. These are features which will be found exceptionally advantageous when register proofs are being taken. The bed, which travels back and forth under the cylinder on all models, has a continuous register rack, which is engaged by the cylinder gear. The Potter Proof Presses are constructed solidly and substantially throughout so that repair parts need not be considered by users. The design of each is not only pleasing, but is of the most practical nature, enabling the printer to take a proof of a single line of type equally as well and with the same even impression as a full form, doing this work in the quickest possible time and in a manner that it would be difficult to excel. The important features of the Potter Proof Presses are briefly stated as follows:

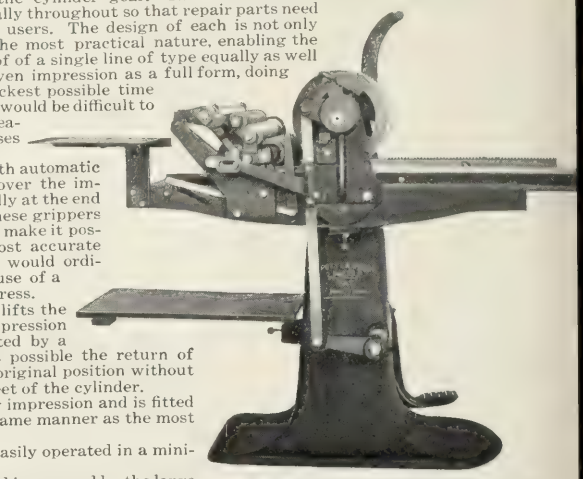
The cylinder is equipped with automatic grippers which take the sheet over the impression and release automatically at the end of same. The combination of these grippers with the adjustable feed guides make it possible to take the most accurate color proofs which would ordinarily require the use of a cylinder or platen press.

The trip which lifts the cylinder off the impression and is easily operated by a foot treadle, makes possible the return of the cylinder to the original position without inking the draw sheet of the cylinder.

The cylinder is of heavy construction, giving a solid, unyielding impression and is fitted with reel rods, which make it possible to pack the cylinder in the same manner as the most modern two-revolution press.

The reel rods in the cylinder are of very simple mechanism, easily operated in a minimum amount of time.

The continuous register rack runs the full length of the bed and is engaged by the large gear on the cylinder. This insures absolute register, and overcomes any possibility of slurring or wear on the type.



Potter Proof Press No. 2 with inking attachment

Quick clean proofs with cuts well brought out and every error in composition or damaged type shown clearly are being turned out daily by users of the Potter Proof Press. Machines are equipped complete with inkplate, trip, cast brayer and galley plate for use when proofs are taken of matter not in the galley, such as individual cuts, etc. The machine will also be supplied without trip for plants where straight work is done, such as linotype offices, etc.

Each Machine regularly furnished is supplied with rubber blanket and heavy press board, for bringing the rubber blanket directly next to cylinder and wrenches.

If you want good proofs at the minimum of expense the Potter Proof Press is the machine for you to buy.

The Potter Proof Press is built in four sizes to suit the various requirements of all printers. The latest No. 0 machine has no grippers or impression trip, but otherwise is the same as the regular Potter Proof Press. It is a splendid machine for the smaller sized shops and for large printers who need more than one press for one color proofing. It is very easy to operate, being designed primarily for speed and convenience. It can take equally as good proofs as the regular machine, excepting that it has none of the attachments for taking register proofs.

The No. 1 Potter Proof Press is equipped complete with grippers and impression trip for printers who do not have large forms to prove.

The No. 2 Potter Proof Press is the same as the No. 1, but has wider bed. It has grippers and trip, and is known as the standard machine, as it will handle the work of almost any printing office, large or small.

The new model No. 3 Potter Proof Press is equipped with grippers, trip and feed table and also has an inking attachment. It is easily operated as it has eight anti-friction bed rollers under the impression and four on the tracks. It is masssive and substantially constructed throughout and weighs about eighteen hundred pounds. This machine is designed for large commercial plants and newspaper offices where full page forms are proved at one time. It will also be useful to country newspapers as it will print two pages of a six column paper.

Potter Proof Press No. 3

Potter Proof Press No. 0

Prices of the Potter Proof Presses

No. 0 Potter Proof Press, bed 11x24 inches	$110 00

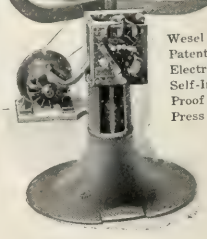
Inking device for No. 2 press, complete with cast rollers	85 00

Wesel Patent Electric Self-Inking Proof Press

The Wesel Electric Proof Press is a self-inking proof press, which is designed to be operated by an electric motor. It can also be operated by hand. The entire press is thoroughly well made and finished and will do fast and accurate work. Twenty-five proofs per minute can be easily taken. It gives a sharp, clear impression over the whole form. The quality and amount of its output makes the Electric Proof Press a far more economical press than any other. The press stands on a strong pedestal, strongly supported by braces. A pedal operates the friction clutch. The impression cylinder is of steel covered with seamless rubber tubing.



Wesel Patent Electric Self-Inking Proof Press

Sizes and Prices of Wesel Patent Electric Self-Inking Proof Presses

Wesel Electric Self-Inking Proof Press, bed 10x29 inches, with motor complete	$210 00
Wesel Electric Self-Inking Proof Press, bed 12x29 inches, with motor complete	265 00

In ordering, state voltage of current by which motor is to be driven. With each press a set of cast rollers is furnished.

Vandercook Composing Room Automatic Cylinder Proof Press

The Vandercook Composing Room Cylinder is virtually a perfected printing press without the disadvantages of locking up and making-ready. Forms are placed on the stationary bed, inked automatically, sheet is laid on or fed to grippers, and the proof is taken instantly with just the right impression. No matter how large or small the form may be, uniformly excellent proofs are the result.

The bed and form remain stationary. The method of holding down the cylinder to the bed is a new and valuable idea in printing press construction. The method of distributing the ink is also a decided departure and advance over other methods. It is perfect. Three rings are placed on the cylinder that it is impossible for them to strike a form, even if it extends beyond the printing lines. They insure against damage of plates and forms by careless workmen. The register is so perfect that a halftone can be proved two or more times and show absolute register. A simple lever at the side of the press causes the cylinder to pass high over the type, clear from the form. This feature enables the operator to run the press backwards and forwards should he so desire without soiling the tympan. In proving book pages they may be laid out on the bed so that they will fold in book form. Large sheets can be fed to the grippers easier than they can be laid on the form. By removing the brass bedplate proofs can be taken direct from the galleys. This is very useful in proving large mailing lists. There are many of these proof presses in use in the best newspaper and job printing offices, and are giving the very best results. Send for descriptive circular.

Vandercook Composing Room Automatic Cylinder Proof Press

Prices and Dimensions of the Vandercook Composing Room Cylinders

No.	Actual Printing Surface	Floor Space Over All	Approximate Shipping Weight	Price
25	25x25½ in.	48x60 in.	1650 lbs.	$385 00
*30	25x25½ in.	48x60 in.	1150 lbs.	187 00

*No. 30 is plain, without automatic inking attachment, grippers or trip action.

Vandercook Roller Series Proof Press

This Roller Press was designed for linotype, monotype and general galley and mailing list work, but may be used for regular job work. The inking rollers are passed over the form to a position under the cylinder, which is then brought over the form to the opposite end of the press. The operation is then reversed, a proof being taken at each travel of the cylinder. The action is so precise that no lock-up or even tie-up is necessary. The matter is inked with special hand operated roller device, with vibrator, giving perfect distribution.

This Roller Press is also furnished without inking attachments in two sizes. No. 15, the regular galley size, for use with hand brayer, and No. 30, also hand inked, but large enough for full newspaper page. It will give the best of satisfaction. Send for descriptive circular.

Vandercook High Side Arm Proof Press

This Proof Press was designed for a general run of work and is largely used in job and publishing plants. It is easy to handle and the quality of its work and speed of operation are remarkable. The impression is made on the forward movement, the trip action raising the platen so that it clears the form on the return movement. The entire impression strain is carried on two solid wheels on trunnion, one on each side of the curved platen, thus giving a perfectly uniform impression. Heavy cuts and fine line work may be proved at one impression with equally good results, without make-ready. The matter is inked by hand brayer.

The Nos. 5 and 10 High Side Arm Presses are suitable for galley work.

Chandler & Price Galley Proof Press

The Chandler & Price Galley Proof Press is almost too well known to need a lengthy description here. We might say, however, that hundreds of these presses are in daily use and giving entire satisfaction. They are built in the same factory and under the same careful supervision as the well-known line of Chandler & Price Gordon Presses and Paper Cutters, which should be a sufficient guarantee that they are built right. The Chandler & Price Galley Proof Presses are thoroughly braced and possess an accurate bed and cylinder, the latter being much heavier than the average galley proof presses and consequently should give a better impression.

The American Type Founders Company's line of printers' proof presses is very extensive. This company constantly lives to its motto, "Everything for the Printer." We are always pleased to give expert advice in the matter of equipment.

Washington Hand Proof Press

Many radical improvements have been made in the Washington Hand Press, which cannot fail to still further increase its great popularity. It is constructed entirely from new patterns and all parts are now interchangeable. The platen has been strengthened by transverse ribs, and in order to resist the force of the impression, and to make it uniform at all points, the bed has been made heavier. A brace extending upwards against the frame strengthens the lever support. The bed trucks have been made stronger and the studs, steps and points are all of hardened steel.

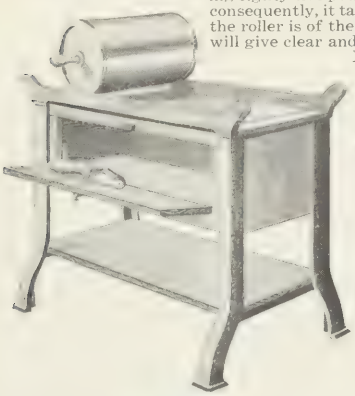
Washington Hand Proof Press

Challenge Proof Presses

These proof presses are built to give the best possible service, and are supplied with and without stands. The bed of each is true and even. The roller is extra heavy, on the No. 1 weighing eighty-five pounds. Its circumference equals the length of the bed and, consequently, it takes only one revolution from end to end. The felt used on the roller is of the finest quality. These proof presses are machines which will give clear and distinct impressions with no injury to delicate type. Nos. 00, 01, 02 and 06 are made to fasten on a stand or table. Nos. 0, 1, 2, 3, 4, 5 and 6 have a substantial iron frame. Directly beneath the bed is a convenient spring door cabinet used for ink, etc.



Proof Press with stand

Proof Press without Stand

Cylinder covered with finest felt blanket. Brayer, handle and core are furnished with each press, excepting those without the iron stand.

Sizes and Prices of Challenge Proof Presses

Size	Size of Bed	Shipping Weight	List Price
No. 00	9 x27-inch bed without stand	135 pounds	$17 50
No. 01	10½x32-inch bed without stand	200 pounds	20 00
No. 02	16½x35-inch bed without stand	345 pounds	30 00
No. 06	9 x40-inch bed without stand	160 pounds	22 00
No. 0	9 x27-inch iron stand, cabinet	219 pounds	25 00
No. 1	10½x32-inch iron stand, cabinet	275 pounds	30 00
No. 2	16½x35-inch iron stand, cabinet	430 pounds	40 00
No. 3	20 x38-inch iron stand, cabinet	830 pounds	60 00
No. 4	24 x42-inch iron stand, cabinet	900 pounds	75 00
No. 5	27 x54-inch iron stand, cabinet	1300 pounds	125 00
No. 6	9 x40-inch iron stand, cabinet	230 pounds	30 00

We shall be pleased to give additional information regarding any line of Proof Presses.

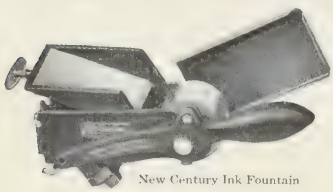
New Century Ink Fountain

The New Century Ink Fountain is used on Chandler & Price and Gordon Presses. It makes possible an evenly inked form and an ink supply to meet the form requirement. It will increase the press output many hundred impressions per day and will not mark the form or print. It will minimize offset dangers and make the dreaded wash-up a quick and easy task. Its quick, one-screw ink regulation and one-screw contact adjustment, not only save time, but insure that beautiful, even, uniform color so prized by printers who do high quality, distinctive work.

Always specify size and make of press if the New Century Ink Fountain is desired for use with other than the Chandler & Price and New Series, or the Challenge Gordon Presses, as special attachments are required.

The New Century Ink Fountain fits all sizes New Series and regular Chandler & Price Presses; also Challenge Gordon from 8x12 to 14x28.

Price, complete $10 00

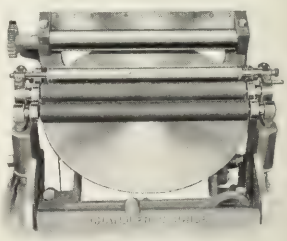


New Century Ink Fountain

The C. & P. Long Fountain

This Fountain is used for the better grades of printing, halftone, and work where fine, even distribution is essential. Thousands of these fountains are in constant use and invariably give the greatest satisfaction. It is simple in construction and effective in operation. Flow is readily adjusted and the fountain can be quickly removed and another substituted for colors if desired.

Price $20 00

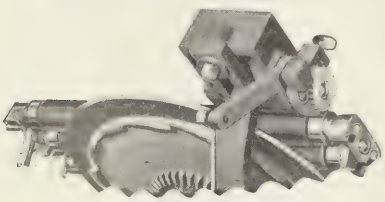


C. & P. Long Fountain with vibrating roller

The C. & P. Buckeye Fountain

This illustration shows the position of the Buckeye Fountain, which is generally used on smaller sizes of the Chandler & Price and other presses. This fountain is an economical device and is found to be entirely satisfactory on medium classes of work. It is readily attached, well constructed and its action is all that can be desired. The roller can be quickly removed for cleaning and the ink supply adjusted with expedition.

Price, Buckeye Fountain $10 00



Buckeye Fountain

Vibrating Roller for C. & P. Presses

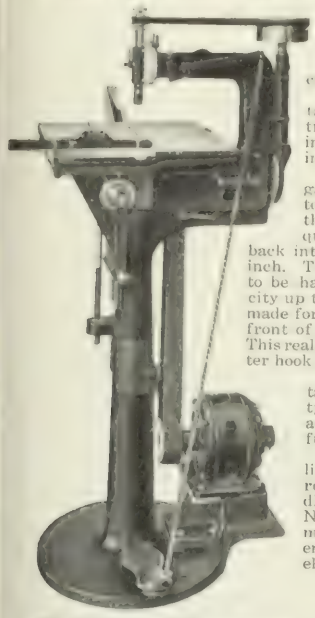
This is an extra, which should be used on halftone or solid work which requires exceptional distribution. Its action produces the same result as double rolling the form and it absolutely prevents streaking.

Price, Vibrating Riding Roller $10 00

The capabilities of this catalogue are large, but they are not ample enough to allow space for all the appliances which are used in the art of printing. If you do not find just what you want in this list, do not rest under the impression that we cannot get it for you. Our aim is to please our customers and fill their requirements, so write us at once and we will promptly execute your wishes.

The Miller Universal Saw-Trimmer

The Miller Universal Saw-Trimmer is unique in many important features and has so many advantages of real merit that it should be an indispensable portion of the equipment of every modern composing room.



It is the only machine that saws and trims in one operation, gauging absolutely to American Point System; that saws zinc blocks (of any size) without burning the printing surface; that rabbets zinc tint blocks with the circular saw, the complete operation of sawing and rabbeting being finished in less than five minutes per block; that drills two, eight-, ten-, twelve- and eighteen-point to American Point System; that planes type-high without "dipping" in the center; that mechanically routs or jig-saws a perfect circle.

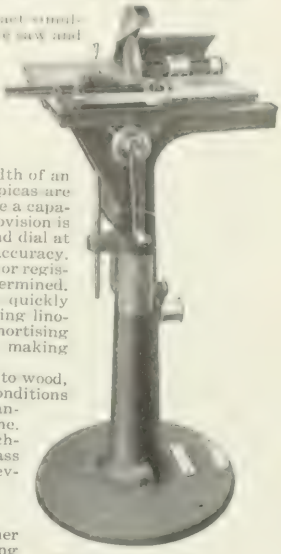
It combines a saw blade and trimmer head in one so that they act simultaneously. In these is the basic principle of the entire machine. The saw and trimmer are on the same mandrel with the trimmer knives projecting through the saw blade. The knives, when changed for sharpening, can be readjusted in a few moments with the utmost accuracy.

By simply turning the knurled worm the lateral micrometer gauge is adjustable to points and fractions of points. If it is desired to change the adjustment quickly, the gauge may be lifted free from the rack and moved backward and forward rapidly as in the ordinary quick-acting vise. It is locked automatically by simply dropping it back into place. The gauge is absolutely accurate to within one-thousandth of an inch. The capacity length is sixty picas. Where lengths more than sixty picas are to be handled an extra gauge can be obtained which will give the machine a capacity up to one hundred and sixty picas. The table slides freely and every provision is made for wear. By raising and lowering the table by means of the crank and dial at front of the table, the projection of the saw blade is regulated to point accuracy. This really constitutes a vertical micrometer gauge, so that in making tacking or register hook bevels, mortising or undercutting, the depth of the cut is readily determined.

All the ordinary operations arising in the composing room are quickly taken care of by the standard equipment, such as sawing and trimming linotype slugs, and similar metals to the accuracy of type; squaring, mortising and undercutting cuts accurately to pica and point measurement; making furniture, reglet, and tint blocks; notching initial letters, etc.

The tools furnished with the standard equipment limit its use to wood, linotype slugs, electrotypes, stereotypes and the softer metals. If conditions require work of a still greater scope, convenient attachments for handling same can be provided with the machine or at any subsequent time. No mechanical change is necessary for their application. The attachments usually furnished are the brass saw for cutting brass rule, brass embossing plates, zinc and copper; the rabbeting head for tacks; the beveler head for register hooks and the router and jig-saw attachment.

Miller Universal Saw-Trimmer with Router and Jig-saw Attachment in working position and motor attached



Miller Universal Saw-Trimmer

Equipment of Miller Universal Saw-Trimmer

The equipment furnished with the Miller Universal Saw-Trimmer consists of the following: One column complete with tables, elevating mechanism, saw arbor and single pulley idler; two six-inch standard saws and heads with trimmers; one sixty-pica swivel gauge with locking bolt, nut and locating-pin; one sixty-pica point end gauge; one five-point line holder; one removable workholding vise and locking screw; one miter vise; one batter with locking screw and washer; one saw hood with bolt and nut; one four by three-eighths inch flat emery wheel; one saw file; one saw swage; one punch; one hammer; one oil stone; one screw-driver; one brush; one machine oil can.

Price, Universal Saw-Trimmer with standard equipment only $300 00

The Router and Jig-saw Attachment

This attachment is invaluable for routing, drilling, jig-sawing and type-high planing. To swing it into working position, it is only necessary to remove the circular saw and elevate the table. No change of speed or shift of belt is required. The complete change from Universal Saw-Trimmer to Router and Jig-saw and vice versa can be made in thirty seconds.

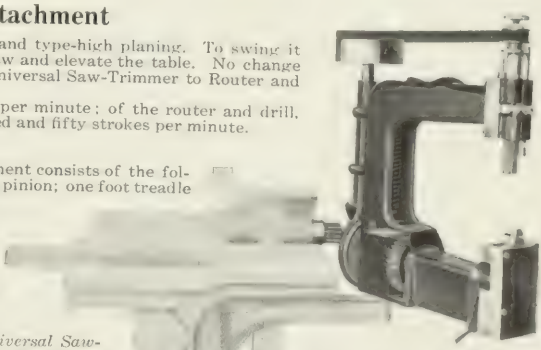
The speed of the saw arbor is thirty-six hundred revolutions per minute; of the router and drill, fourteen thousand per minute; and of the jig-saw, thirteen hundred and fifty strokes per minute.

Equipment

The equipment furnished with the Router and Jig-saw attachment consists of the following: One router and jig-saw head with locking bolt; one driving pinion; one foot treadle and chain; six router belts; one type-high gauge; one work plate with four locking levers; three narrow jig-saw blades; three wide jig-saw blades; one broach; six router bits—one-sixteenth, one-eighth, three-sixteenths, one-fourth, one-half and three-fourths of an inch; seven drills—two six-point, two eight-point, one ten-point, one twelve-point, one eighteen-point; one countersink for screws; one eight-point pin for circles; one sperm oil can; one stand for attachment.

Practically all of the tint blocks used in the display pages of this catalogue were made on the Router Attachment of the Miller Universal Saw-Trimmer by means of an off-set impression on maple engraving block and then placing the block on the bed of the Saw-Trimmer and following the lines desired to be routed. After a little experience very close work is possible.

Price, Router and Jig-saw Attachment with tools $200 00



Miller Universal Saw-Trimmer with Router and Jig-saw Attachment

Special Attachments

The following attachments will fit any Universal Type Saw-Trimmer, but are not included in the standard equipment:

160-pica point end gauge, complete	$25 00	Angle Cutter Vise, complete	$10 00
4-point, 5-inch brass saw and head, complete	20 00	Angle Cutter Grinding Attachment	15 00
Brass Saw Grinding Attachment and dish emery wheel	10 00	Line holders, per set, complete (any size)	5 00
Beveling head, complete	10 00	Right-hand Miter Vise, complete	10 00
Rabbeting head, complete	10 00	Glass Guard, complete	7 50
Register Gauge, complete	15 00	Double Pulley Idler, complete	5 00
12-point attachment for workholding vise	10 00	12-point, 5-inch special brass saw, with head complete	20 00
120-degree Angle Cutter with head, complete	25 00	6-point, 5-inch special brass saw, with head complete	18 00
90-degree Angle Cutter with head, complete	22 50	3-point, 5-inch special brass saw, with head complete	18 00
60-degree Angle Cutter with head, complete	20 00	2-point, 5-inch special brass saw, with head complete	18 00
45-degree Angle Cutter with head, complete	17 50		

Special Motors for the Universal Saw-Trimmers

The motors listed are of ample power and fully guaranteed by the manufacturers.

Direct current motor, with starting box, 110 or 220 volts	$50 00	Altern't'g current motor, 2 phase, 60 cycle, 110 or 220 volts	$60 00
Direct current motor, with starting box, 500 volts	60 00	Altern't'g current motor, single phase, 60 cycle, 110 or 220 volts	75 00
Altern't'g current motor, 3 phase, 60 cycle, 110 or 220 volts	60 00		

Above prices cover motors mounted on special iron sub-bases attached to column and complete with pulley and belt to saw arbor.

Countershaft (attached to column with belt to saw arbor), complete $25 00

Weight (Crated for domestic shipment)

Universal Saw-Trimmer, without motor or countershaft (approximately)	325 lbs.	With Motor (approximately)	400 lbs.
With Countershaft (approximately)	350 lbs.	Router and Jig-saw Equipment, boxed (approximately)	125 lbs.

New Mercantile Addressing Machine

The Mercantile is a simple machine built wholly of iron and steel, with polished steel working parts and can be supplied either with or without power. A substantial pedestal supports a long flat bed grooved to receive a galley in which is held the addresses.

Mercantile Addressing Machine with Motor Power Attachment

The best method of setting these addresses is to use American Type Founders Company's Time-Saving Mail-List Type, but linotype slugs or other cheap material may be used. This groove is covered with a nickel plated steel cover which has an opening in the center sufficiently large to accommodate the size of address used. The printing arm, a "V" shaped piece, the upper half of which is shown in the cut herewith, is actuated by a rod fastened directly to the treadle below. This arm is fitted with a rubber printing head. By means of a steel hook which engages the last line of type in each address, the address is pulled forward exactly under the opening in the steel cover. The wrapper, envelope or other matter to be addressed is fed into position over the cover and the rubber tipped arm descending brings the paper into contact with the inked type and secures an address as perfect as if printed on a printing press. When the treadle is released, a strong spring raises the printing arm and the next address is automatically pulled into position. One downward motion of the treadle and its release suffices for the whole operation. The machine can be operated just as fast as the treadle can be depressed and released and as the speed of this operation is far in excess of the number of sheets which can be fed into position, the output is limited only by the dexterity of the operator. A good average speed is from two thousand to three thousand per hour, but it is possible to double this.

Mercantile Addressing Machine Cabinet

The work of the Mercantile is excellent. One of the great advantages which it possesses is that of printing of imitation typewritten addresses, either direct or through silk. These addresses may be made to match perfectly letters printed at high speed on regular printing presses, multigraph or other suitable devices. This is almost invaluable in circularizing. The favorable impression which a neatly printed envelope creates upon the mind of the recipient is of great value to the advertiser. After your mailing list is once prepared there is practically no chance for error. Every name and address is neat and legible. There are no pasted labels to rub off in the mails and no faintly suggested names surrounded by a smudge covering the back part of the envelope, wrapper or invoice. There is no handling of the individual addresses. A galley containing from fifty to one hundred and ten addresses is shoved into the groove under the nickeled plate until it engages the propelling hook. The galley then requires no more attention until the bell rings to indicate the last address and it is pulled out and another substituted. A cabinet containing fifty thousand addresses occupies a floor space of only forty-three by thirty-four inches and is an ornament to any office. Every name in a list of this size would be within the reach of the operator and if properly indexed could be instantly located.

Mercantile Quoin

Mercantile Addressing Machine Galley

Galleys are thirty inches long, constructed of the best double compressed sheet zinc. The addresses are held firmly in place by a thumbscrew at the end of the galley. Addresses varying only one line in width may be used promiscuously when a ten point lead, slug or wood reglet is used after each address. One of the greatest advantages of this equipment is the convenience with which changes or corrections can be made. The system lends itself readily to classification, alphabetically or otherwise, and any name on a list is readily accessible. When our Time-Saving Mail-List Type is used, the cost of making changes in the list is simply the cost of distribution and composition of the type. This work may be readily done by any intelligent boy. Machines are made regularly in three sizes, ten, fourteen and sixteen ems in width. Special widths can be made to order.

For prices and information regarding Mercantile Addressing Machine Galleys refer to the galley section of this catalogue. Send for circular giving complete details and illustrations of these machines.

The New Wing-Horton Mailers

The large number of Wing-Horton Mailers in use well demonstrate their superiority. The machine is particularly adapted to the use of publishers, societies and business houses that mail a large number of envelopes or circulars to members and customers. It is guaranteed to do better, easier and faster work than any other mailer, and is easy to learn to operate. It is held naturally, does not cramp the muscles of the hand or arm and can be operated equally well with either hand. It perfectly guides and thoroughly pastes the slip, removes all surplus paste and the papers or wrappers are not stuck together. The knives are reversible. The rollers which feed the paper are pressed together by a spring and accommodate different thicknesses or inequalities in the paper. The Wing-Horton Mailer is manufactured in six sizes, to carry any list from 1⅞ inches up to 3⅞ inches.

The Mustang Mailers

The Mustang Mailer prints directly on the paper or envelope. The platen and its frame move automatically, printing one address only at a time. It will print addresses making three lines of eight point type, or their equivalent. It occupies a space of thirty-seven inches in length and four and one-half inches in width, is made wholly of iron, without springs or complications of any kind. The mail list is made up in galleys ten ems pica wide on the inside. Each galley holds seventy-five addresses, is easily accessible for making corrections, and is convenient to handle. The machine weighs about fifteen pounds and the galleys one pound each. The mailer is capable of printing addresses at the rate of fifteen hundred to twenty-five hundred per hour, according to the expertness of the operator in passing the paper to and from the mailer.

The Acme Mailing Machine

The Acme Mailing Machine has been greatly improved, simplified and strengthened. It is light and convenient and may be readily handled by anyone who has learned to use a mailing machine. It will do a large amount of work in the shortest space of time and with least labor to the operator.

Price of the Acme Mailing Machine

Acme Mailer, complete **$15 00**

Ideal Form Trucks

The Ideal Form Trucks are very substantially built and embody the latest designs in improved construction. The body of each truck is of unusual strength, and carries the form close to the floor, making it almost impossible to upset the truck, at the same time facilitating the handling of the form. They are made in two styles. No. 1 has solid iron wheels. No. 2 is provided with rubber tires, which prevent slipping and are easier to propel on any floor. Boxed individually.

Ideal Form Truck

List Prices of Ideal Form Trucks

No. 1 Ideal Form Truck, with iron tires	$3 00
No. 2 Ideal Form Truck, with rubber tires	5 00

Success Safety Three Wheel Form Truck

The Success Safety Form Truck has the great advantage of supporting a form safely, no matter how heavy it may be. The form is supported by a stout rod, to which it is held by an adjustable clamp. This obviates the necessity of supporting the form by hand. The front wheel has swivel bearings, so that the load is guided with more ease and sureness than is possible by the use of an ordinary truck. The construction is extraordinarily strong, and of first class quality.

Success Safety Three Wheel Form Truck

Prices of Success Safety Form Trucks

Success Safety 3 Wheel Form Truck	$10 00
4 Wheel Form Truck	6 00
2 Wheel Form Truck, cast iron (15 lbs.)	3 00
2 Wheel Form Truck, malleable iron (4 lbs.)	3 00
Rubber Tires, extra, per wheel	1 00

Sectional Chase and Form Rack

Sectional Chase and Form Rack

The Sectional Chase and Form Rack is a new article for pressroom and composing room requirements, and provides a suitable holder for chases and locked forms at a very moderate price. In the pressroom the Sectional Chase and Form Rack can be put in position convenient to the presses, and forms when received from the composing room, ready for the press, can be temporarily placed in this rack until required for printing. In the composing room the use of the Sectional Chase and Form Rack will clear up the office, allow more stone room and minimize the danger of pied forms. This Rack is made in two sections and sold in sets consisting of two sections "A" and one section "B." One each of section "A" and "B" is screwed to the floor and one section "A" to the wall. A set arranged thus accommodates six chases or forms. If provision for more chases or forms is required, other sets can be added, as the sections are designed to work in multiples. Made of cast iron, strongly reinforced to withstand any amount of hard usage. The Sectional Chase and Form Rack represents the newest device for economically placing chases and forms.

Section A

Section B

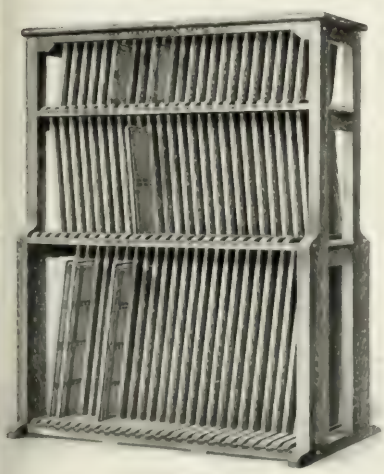
List Prices of Sectional Chase and Form Rack

Set consisting of two of Section "A" and one of Section "B"	$3 75
Single Section "A," each	1 25
Single Section "B," each	2 50

Prices quoted on this page are subject to prevailing discounts which will be quoted on application.

Form Racks

The new Form Racks as represented by Nos. 0, 1 and 2 (see left hand illustration), are strong and substantially built. They take up a surprisingly small amount of floor space considering the number of forms accommodated. The bottom boards where the forms rest are covered with sheet iron turned at the edges and firmly fastened. This prevents wear and tear which would otherwise occur when heavy forms are pushed into the compartments. The use of these Racks will clear up the office, allow more stone room and minimize the danger of pied forms.



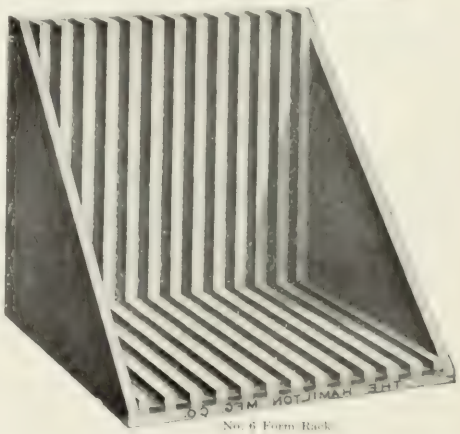
No. 2 Form Rack

Prices and Dimensions of Form Racks

No. 0. Height, 6 feet 9 inches; width at base, 22 inches; length, 2 feet 8 inches. Shelves for 10 chases in each tier, 30 shelves in all. Weight, 350 pounds. Price $24 00

No. 1. Height, 6 feet 9 inches; width at base, 22 inches; length, 3 feet 9½ inches. Shelves for 16 chases in each tier, 48 shelves in all. Weight, 475 pounds. Price 36 00

No. 2. Height, 6 feet 9 inches; width at base, 22 inches; length, 5 feet 4½ inches. Shelves for 24 chases in each tier, 72 shelves in all. Weight, 600 pounds. Price 52 00



No. 6 Form Rack

The Form Racks represented by No. 5 and No. 6 (see right hand illustration) are new articles especially designed for pressroom requirements, and provide suitable holders for locked forms at a very moderate price. Racks can be placed near presses and forms when received from the composing room ready for the press can be temporarily placed in these Racks until required for printing.

Price and Dimensions of No. 5 Form Rack

No. 5 Form Rack provides accommodation for 18 large chases. The height at the back is 31¼ inches; the depth from front to rear is 25 inches; the width across the front is 37 inches. The bottoms of chase grooves are lined with iron, turned at the edges and fastened with screws at the front, to prevent damage to woodwork. Weight, crated, ready for shipment, 200 pounds.

Price $22 00

Price and Dimensions of No. 6 Form Rack

No. 6 Form Rack provides accommodation for 12 medium size chases. The height at the back is 25¼ inches; the depth from front to rear is 19 inches; the width across the front is 25¾ inches. The bottoms of chase grooves are lined with iron, turned at the edges and fastened with screws at the front, to prevent damage to woodwork. Weight, crated, ready for shipment, 100 pounds.

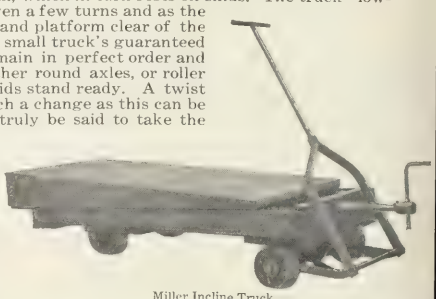
Price $14 00

The Miller Incline Truck

The Miller Incline Truck, Platform and Skids end all truck troubles of the printer. No trucks are tied up for every platform is a truck. By this plan the pile of sheets does not rest on the floor, but on a platform, which in turn rests on skids. The truck—lowered — is shoved under the platform, between the skids. Then the crank is given a few turns and as the top part of the truck is elevated by an incline plane device, it raises the sheets and platform clear of the skids. It will do this even if the sheets weigh five thousand pounds, which is the small truck's guaranteed capacity. No exertion is necessary on the part of the workman. The sheets remain in perfect order and all the man has to do is walk away with the load. The truck is equipped with either round axles, or roller bearings, so it is easily pulled. When the destination is reached another pair of skids stand ready. A twist of the crank to the left and the sheets and platform are then deposited safely. Such a change as this can be made very quickly. The truck is now ready for other work. This truck may truly be said to take the place of fifty trucks, as it is only a question of having enough skids and platforms to meet your needs and these, which may be readily constructed and are cheap, may be placed at convenient positions all over your plant.

The Miller Incline Truck is applicable to every business, where much moving of wares is done.

There is a fifth wheel plate in front, except on the No. 1, which has a large size castor. If preferred a truck may be equipped with all castors and swivel castors. Prices will remain the same.



Miller Incline Truck

That the Miller Incline Truck is an investment which readily pays for itself is confirmed by some very strong testimonials which have been received. The Knapp Company writes that it is using about three hundred platforms operated by two trucks at its plant, located at Bush Terminal, Brooklyn. The Stone Printing and Manufacturing Co., of Roanoke, Va., states that it has found them very satisfactory. The H. Bridgman Smith Co., of Brooklyn, is using a truck with entire satisfaction. The Richmond and Backus Co., of Detroit, admits that there is nothing that it has added to its equipment in the way of a money-saver that has produced such an excellent result as this Truck. The R. R. Donnelley & Sons Co., of Chicago, states that it has found the Truck to be perfectly satisfactory, both as a time and money saver.

Wisconsin Printers' Trucks

These strong, easy running Trucks are made especially for the use of Koerner Interlocking Drying Racks and can be easily moved in a limited space. The Truck will turn in its own length, the two end wheels bearing on swivels. The handle is detachable and hooks on at either end—this feature saving much time in turning a truck laden with drying racks, paper or a form. These Trucks are designed to hold an unlimited number of Patent Interlocking Racks and may be depended upon to bear immense weight and give lasting service. They are unquestionably the easiest running printer's trucks on the market.

List Prices of Wisconsin Printers' Trucks

	Size of Top	Weight, Crated	Price
No. 1	24x36 inches over all	160 pounds	$16 00
No. 2	33x45 inches over all	180 pounds	18 00
No. 3	38x52 inches over all	200 pounds	20 00

Wisconsin Printers' Truck

Hamilton Form Truck

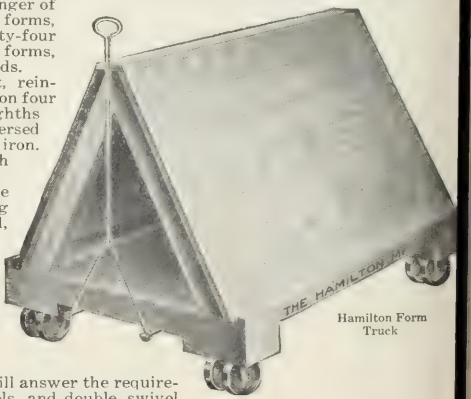
A most convenient article to have around a printing office. It can be used to advantage trucking forms back and forth between the composing room and the pressroom, without danger of accident. It will take two forms, one on each side, up to thirty-four by forty-eight inches, or several small forms, without overlapping the edges of form beds.

It is made of hardwood throughout, reinforced by cleats underneath, and mounted on four double-wheeled swivel castors. Diameter of wheels is three and five-eighths inches. This insures easy motion. The Truck can be turned around and reversed within the floor space it occupies. The handle is detachable, and of malleable iron. The bottoms of the grooves where the chases rest on the Truck are lined with iron, so that the woodwork will not be damaged.

Length, forty-eight inches; extreme height from the floor, thirty-nine and one-half inches; extreme width, forty-two inches; size of the sloping form beds, thirty-four inches high, forty-eight inches long. Weight, crated, ready for shipment, three hundred pounds.

List price $48 00

Other sizes of this Truck made to order at proportionate prices.



Hamilton Form Truck

Truck for Paper Rolls

In every large printing office using paper from the roll there is always a demand for a suitable truck for conveying the heavy rolls to the stock room when received, and from the stock room to the pressroom. This new Truck will answer the requirements fully. Made substantially of hardwood, with cast iron center wheels, and double swivel castors on the ends. If interested we shall be pleased to send you an illustration.

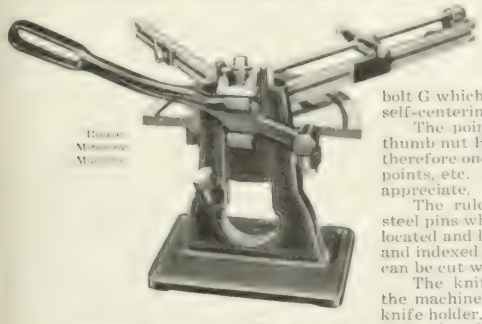
Length, twenty-eight inches; width, twenty-four inches; extreme height, fourteen and three-eighths inches; center height, eleven inches. Weight, crated, one hundred and fifty pounds.

List price $24 00

All prices quoted on this page are subject to prevailing discounts.

Rouse Mitering Machine

This machine has so many excellent qualities that it is claimed to be the most perfect mitering machine made. It is equipped with a positive point gauge that sets instantly and locks automatically to points. This enables the operator to miter rules to picas, nonpareils or points, inside as well as outside measure. The construction and operation of this gauge is shown in the X-Ray View. Here the gauge rod A on which the gauge head F slides is graduated to picas. It also has flaring notches milled on one side six points apart. These notches are engaged by four teeth of corresponding taper on the end of the locking-bolt G which is held firmly in position by a stiff spring. These teeth are self-centering, take up all play or lost motion and compensate for wear.



Rouse Mitering Machine

The point adjustment shown in the front view is secured by the thumb nut B, one revolution of which moves the entire gauge six points, therefore one notch towards you adds one point, two notches two points, etc. This is an advantage which printers will be quick to appreciate.

X-Ray View Rouse Mitering Machine Gauge

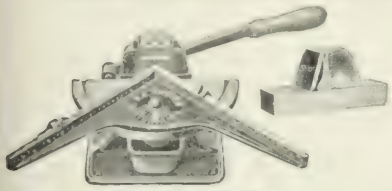
The rule holder or guide is provided with two hardened steel pins which engage in the circular slot in the table, and is located and locked at the exact angle wanted. The table is drilled and indexed for 2, 3, 4, 5, 6, 8, 10 and 12 sided figures. Square sets can be cut without any change whatever.

The knife holder travels in two slots milled in the body of the machine. These slots, being wider than the guides on the knife holder, permit the knife to be fed up to the work with each downward movement. The inner face of the slots form a positive stop, beyond which the knife holder cannot go. The knife is of the best tool steel, hardened and set in the knife holder at the right angle to obtain best results. It is provided with adjusting screws by means of which it is held firmly and adjusted quickly. The edge of the knife can be easily maintained by means of a jointer.

Price Rouse Mitering Machine, complete, with chip cup and jointer $20 00

Hansen Mitering Machine

As the rule holder in the Hansen Mitering Machine has an angle of ninety degrees, when it is placed in a central position, it is possible to miter square sets without changing its position. By means of a pin it is easily set to any desired angle and as there are no lines to guess at the operator is enabled to obtain the required angle, absolutely accurately at all times. It is graduated by twelve point ems and has two gauges. The left hand gauge has a supporter which enters any one of the holes of even ems and by turning the supporter a quarter turn, it lengthens or shortens the measure to a six point em. The inside measure is obtained by placing 2, 3 or 4 points between the supporter and the gauge. The knife is held firmly by two screws and is regulated by two adjusting screws. A jointer for sharpening the knife to the proper angle is furnished with each machine. This enables the operator to have the same bevel at all times, which is very essential in order to obtain a clean cut. The bed has an index, 2, 3, 4, 5, 6, 8, 10 and 12 respectively, representing the different angles for a 2, 3, 4, 5, 6, 8, 10 and 12 sided figure, therefore dispensing with lines to be guessed at. The handle strikes a rubber tube, thus obviating all noise and jar.

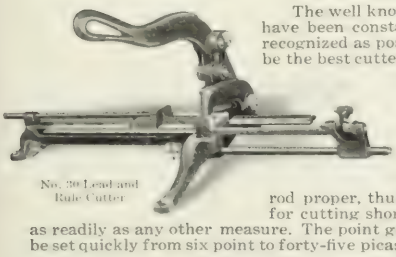


Hansen Mitering Machine

Price Hansen Mitering Machine, complete, with or without chip cups $18 50

American Lead and Rule Cutter No. 30

The well known American Lead and Rule Cutters were first made in 1899, and since that time they have been constantly improved in design, construction and finish. Without a doubt today they are recognized as possessing unexcelled merit, and are conceded to be the best cutters made. Cutter No. 30 is the latest development and has the following advantages: the gauges can be set instantly; they are self locking and cannot slip, as there are no screws. They are guaranteed for accuracy. The mechanism of the Cutter is such that the gauges can be set in a fraction of the usual time required. The front gauge slides on a stationary rod, graduated to picas and acts as a truss to the gauge-rod proper, thus forming a rigid construction. It is convenient for cutting short lengths, as the gauge can be set to nonpareil as readily as any other measure. The point gauge comes with the No. 30 Cutter only and can be set quickly from six point to forty-five picas, by points. Capacity, 105 ems; by points 45 ems.



No. 30 Lead and Rule Cutter

List price American Lead and Rule Cutter No. 30 . . . . . $12 00

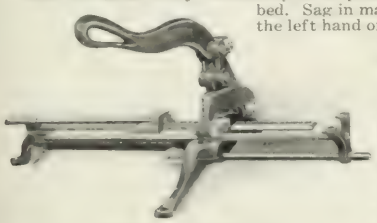
Utility Lead Cutter

The strongest cheap lead cutter made and a reliable and handy tool.

Price Utility Lead Cutter, $2 00

American Lead and Rule Cutter No. 20

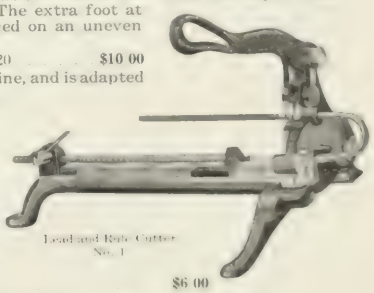
This No. 20 Cutter is identical with the No. 30, except that it does not have the point gauge. The cutters are graduated to picas and numbered every five ems up to 105 picas. The measure is indicated by the bed gauge when reversed and extended beyond the bed. Sag in material is avoided by the support on the right. The extra foot at the left hand of the bed steadies the machine, even when placed on an uneven surface. Capacity, 105 ems.



Lead and Rule Cutter No. 20

List price American Lead and Rule Cutter No. 20 . . . . . $10 00

The No. 1 Cutter is a good serviceable machine, and is adapted for small offices, paper box makers and for cutting odd lengths. It has a reversible bed gauge which is clamped and secured quickly by a compression thumbscrew. The gauge is numbered every five ems but is not graduated. There are two rows of figures on the bed gauge, one showing the measures in normal position and the other indicating the measures when the gauge is reversed and extended. The grooved bed, a feature of this machine, prevents slipping of thin material. The material and workmanship of this cutter are the best obtainable. Capacity, fourteen inches.



Lead and Rule Cutter No. 1

List price American Lead and Rule Cutter No. 1 . . . . . $6 00

We also handle other sizes and will be pleased to quote prices and particulars

Rouse Lino-Slug Cutter

This Lino-Slug Cutter has been designed for cutting single linotype slugs. Besides being strong and compact, it possesses many valuable time-saving and accuracy insuring features. The gauge can be set instantly to any measure up to thirty-one picas, either by nonpareils or points. The gauge locks automatically and cannot possibly slip or be forced back when once locked. It is accurate and remains so. The knives are made of the best steel finely tempered. The upper knife is shaped so as to secure a shear cut. It will cut the thickest slugs clean and square and of uniform length. It is the only slug cutter with a permanently accurate gauge on which it can be set instantly. It is the only slug cutter on which the gauge cannot slip and on which the last slug cut must be the same length as the first one.

Hoerner's Combination Shute Board and Type-High Machine

Every printer knows what a source of annoyance it is to have cuts or plates, which are uneven or too high, sent to the press. The pressman resorts to all sorts of expedients to overcome the difficulty. He tries to scrape the cut down with a knife or sandpaper, and even with the greatest care and much lost time, is unable to make it satisfactory. Here is a machine at a very nominal price that will do the work quickly and cheaply. The Hoerner Combination Shute Board and Type-High Machine will reduce cuts to type-high and make them true and even, besides doing many other things that may be asked of it. Any printing office doing a considerable amount of cut work really cannot afford to be without one. If you desire to get your costs of production down, here is one way to begin. The Hoerner Combination Shute Board and Type-High Machine is simple, solid and accurately made. All parts, except the plane handles, are of iron or steel. Interchangeable planes, one carrying a knife blade and the other a file, work upon the carriage or guide frame. A block the full width of the machine can be shaved at one blocking as the carriage can be moved from side to side of the bed while operating. It will hold a block up to ten inches in width and of any length. The block is held down to the bed by a novel vise-lock, instantly adjusted by one turn of a small lever. The sliding cross bar, with miter point, can be set at any angle for mitering. The bed can be fastened to table or bench, thus leaving the operator free hands. This position has the added advantage of being convenient as a bench vise for holding blocks, while attaching or removing plates. Machine complete with file plane and one knife plane.

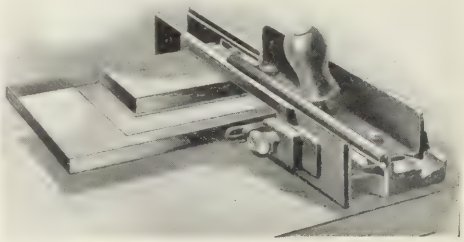
The Challenge Type-High Machine

The Challenge Type-High Machine is a handy implement in the composing room or pressroom, where a more complete machine like the Hoerner is not absolutely required. It will do its work rapidly and entirely satisfactorily, and anyone can operate it successfully. Simply passing all cuts or plates mounted on wood through this machine before the form is sent to press saves a great deal of time in make-ready, and the cuts give much more satisfactory results. To operate the Challenge Type-High machine the cut is placed face downward on the galley which is furnished with the machine and sheets of paper are placed under the cut as may be required to bring the cut to the desired height. When blocks are warped it is best to take the plate off and run the block through the machine, both top and bottom; this operation will make it smooth; then replace plate, adding sufficient cardboard or paper between the plate and block to make it a paper more than type-high; then run the plane over the block again and you have the desired height.

Price of Challenge Type-High Machine . . . $15 00

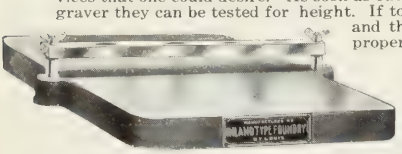


Challenge Type-High Machine.

The Practical Height Gauge

While a great many printing offices and pressrooms already possess a Practical Height Gauge, there are still thousands of offices that would find use for one of them almost every day in the year. The Practical Height Gauge is one of the most useful money saving devices that one could desire. As soon as cuts are received from the engraver they can be tested for height. If too high they should be shaved down. If too low, the gauge will show the discrepancy and the cuts can then be built up to a proper height. The money saved by turning of cuts of proper size and height over to the compositor is too evident to need further argument.

Price of Practical Height Gauge, each . . . $10 00



The Practical Height Gauge

Challenge Type-High Gauges

This Type High Gauge covers the needs of every printer using mounted electrotype plates, halftones, woodcuts, ornaments, initials, etc. It is absolutely accurate, being micro ground to .918 of an inch. It shows instantly whether every part is type high and ready for the press. Another great advantage in the Challenge Type High Gauge will be found in the fact that one end forms a gauge by which the cylinders and bearers of a press can be adjusted accurately.

List price Challenge Type High Gauge . . . $1 50

Mills Three-Heights Gauge

Challenge Type-High Gauge

Mills Three-Heights Gauge

Gauges accurately standard heights of type (.918-inch), electrotypes (11-points) and zinc (16-gauge). The Mills Three-Heights Gauge can be carried conveniently in the pocket or attached to a chain, thereby constantly having it at your command when required. Newspapers using iron bases require advertisers to furnish unmounted electrotypes and process engravings, which must be of standard height. This Gauge detects inaccuracies which usually cause inferior results in printing.

Price, each . . . $1 50

American Press Seats

One of the best evidences that the American Press Seat is a good thing is that some of the largest firms in the country buy it. It fits any press, entails no trouble to attach, and when in place is strong and secure. It fastens to the floor and to the feeder's platform. It can be adjusted in any direction, swings out of the way or may be taken off entirely. When in place it looks like a part of the press. By its use the workmen are more contented, work more steadily and produce more and better work.

The Matych Plate Cutter

The Matych Stereotype Plate Cutter is a machine devised for cutting stereotype plates. It will cut a plate as easily and as quickly as leads are cut on a lead cutter. It will cut between agate lines without injury to type on either side. Single line pieces cut with this machine can be used as well as larger pieces. Any make of plate can be cut by simply changing the under knife—an operation which takes but a moment. The cutter needs no adjustment whatever, and cannot get out of order.

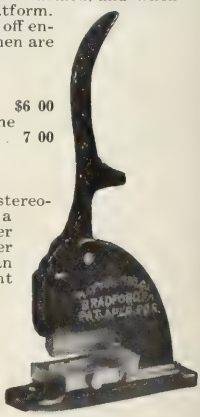
Knives for other plates, extra, each . . . 25

When ordering, send small sample of plates used other than those of the American Press.



The Matych Plate Cutter

The Counting Machine in the Campaign for Efficiency

The Counting Machine is an absolute necessity as a part of the equipment of every job and cylinder press in the office. It insures the delivery of a full count to the customer which every office intends and desires to give. It is possible by its use to keep a record of the output of each press per day or week, which record contains data of prime importance in figuring your costs per hour or per thousand on the press in question. It helps to keep track of the amount of waste, an important item of expense, the reduction of which makes for efficiency and profits.

American Counting Machine

This Counter is especially adapted for platen presses. It registers only when the impression is on. There is no strain on the counter or attachment and the movement is positive and easy. When once set the Counter needs no attention. Any number wheel can be set forward or backward without disturbing the others. No screws are used in the entire construction and the parts are so assembled that they cannot get out of order or become disarranged when in use.

When ordering give size and make of press.

American Counting Machine for Colt's Armory Presses

Use the Counter without attachments by fastening counter to feed board and connecting operating lever of counter with a leather thong to the throw-off bar of the press. The Redington Counter can be attached to a Colt's Armory Press in the same manner.

The Redington Counting Machines

The Redington Counting Machine, Model A, is especially designed for cylinder presses, embossing machines, stamping machines, punch presses, or any automatic machine where a correct count is required; the arrangement of the flanges permits attaching the Counter to wall or stand. It is simple in design, made of heavy material and has large wearing surfaces, thus ensuring ease of operating life. Counts from 1 to 100,000.

Redington Counting Machine Model A

The Model D Redington Counter is for Chandler & Price Gordon Presses *only*. It counts only when the impression is taken. It is easily and quickly attached to the presses named of all sizes. No drilling or removing of parts is necessary. Is secure after attaching and in plain view of operator. Guaranteed accurate at high or low speeds. Counts from 1 to 100,000. Will not jump or repeat. Easily and quickly turned back to zero, or set at any number. No key necessary. The figures are large and can be readily seen at a distance.

The Sheppard Counters

The Sheppard Counter is constructed to run for years. As a test of its reliability it may be noted that among its users are included many of the largest manufacturers. The Model A has two rows of wheels in a box with lock, so that it cannot be tampered with. The top row of dial wheels can be set by the pressman after each run. The lower dials are sealed and record the grand total for any period of time—day, week, month or year—and can only be opened by a key used by the person authorized to take the tally. The lower dial has seven wheels allowing a maximum permanent record, ten million impressions. This counter counts the actual impressions and can be attached to any press without drilling. It is particularly adapted for use on cylinders, to show the exact product for any period of time. The Model B Sheppard Counter has only one set of dials, is suited for job presses or cylinders and is just as durable as model A. It has a lock and key, so cannot be tampered with. Fixtures are available for adapting model B to job presses.

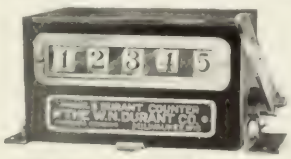
Durant Counting Machines

The Durant Counting Machines are especially adapted for use on printing presses. They are reliable, strong, durable and attractive. They are so well and strongly made that they invariably give perfect satisfaction. They are made entirely of steel, iron and brass, and the workmanship is of the very finest. All parts are interchangeable. The dials are of enamel and have large black figures that can readily be read at a distance. Can be quickly re-set to zero or any number. They are nicely finished, the cover, lever dials, spring, etc., being nickel plated. With each machine a bracket is furnished for convenience in securing it to the feed board of the press.

No. 1 Durant Alarm Counter



Durant Counting Machine Model B

Durant Counting Machine, Model A

The Model B Durant Counter is intended especially for job press work. Every part that carries a strain is made of hardened steel and will permit of a constant speed of over 400 strokes per minute, without the slightest inaccuracy, breakage or appreciable wear.

Wetter Baggage Check Numbering Machine

23-68-50
Model No. 40

This new Model was designed for numbering baggage checks and other work requiring a bold, easily read, figure. These are constructed along the general lines of all Wetter machines, except that dashes are placed between each two figures, so that the numbers may be easily read. They are operated by a blank plunger preceding the figures. Model 40 is one and a half inches high, which necessitates cutting away the bed of the press in order to bring the face of the figures down to type-high. Models 41 and 42 are type-high. These Models are made to order only, and can be furnished with any style figure desired, or with any number of wheels; can also be made to number backward.

One-Inch-Wide Wetter

A new machine, just one inch wide, type-high, and particularly adapted for use on flat-bed web presses that are designed for rapidly printing and numbering tickets, sales slips, coupons and other work that will not admit of using the regular form of numbering machine. Can also be used on the ordinary Gordon press.

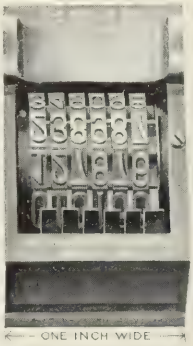
In addition, they can be operated at a higher speed than others, are more durable, and have drop-ciphers that *will not get low*. Old users will appreciate the value of this detail of construction.

Models 232 and 233 can be operated on the ordinary job press, printing figures only, if a "frisket" is used for the plunger to print on; or the same result can be obtained when working on a cylinder press by cutting the inking rollers so the plunger will not be inked.

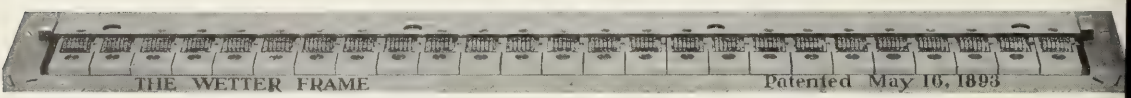
Model 232 **389569** 6-Wheel, $20 00

Model 233 **35890** 5-Wheel, $19 00

Or a better plan is to use a sectional form inking roller, which we recommend when working any style of numbering machine on a cylinder press. (We will furnish detail information in regard to this feature on request.) These models can be worked in rows of twelve or fourteen on a 10x15 press—for numbering tickets one inch wide—and if the run is large two rows can be used, by having the machines arranged to skip "2" so that when the work is finished the numbers will run consecutively. Or three rows can be used if the machines are arranged to skip "3." The same rule applies to four rows or to any number of rows up to ten.

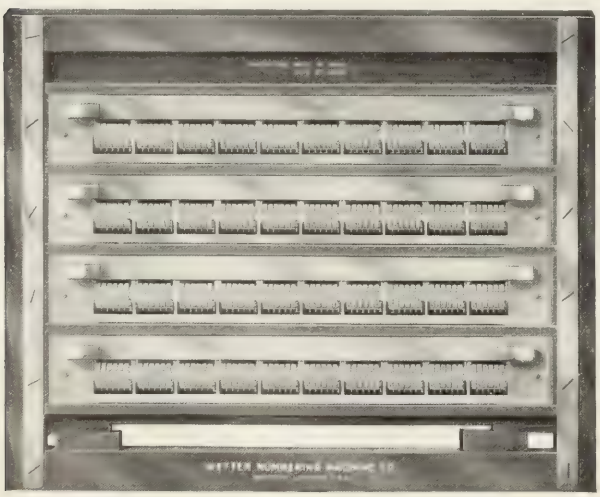


This cut shows twelve machines in a row to print twelve tickets one inch wide. The special steel-locking pieces can be made any length to fit any chase, so that machines cannot fall out and do not have to be locked up sidewise.



Another form of frame (twenty-nine inches long) containing twenty-five machines for special work used on a flat-bed web press

When ordering parts for Wetter machines it is necessary to give the serial number of the machine (stamped on end of frame of machine), for all machines numbered higher than thirty thousand. For machines numbered under thirty thousand, it is necessary to send sample of the broken part wanted, as it cannot be furnished from a sketch, or simply stating the serial number of the machine.



This illustration shows four Wetter frames containing forty machines (to skip "4") locked in a 10x15 chase, ready for printing.

Wetter Special Numbering Machine Frames

The Wetter frames are made on special order only. They are suitable for almost any character of numbering and for use on any flat-bed printing press. They are specially designed for using one or more numbering machines at one time, to be operated by plungers at each end of each frame.

Frames can be made of almost any length, and to properly operate almost any number of machines desired.

The frames can be adjusted to any position in the chase, and *each* numbering machine can be adjusted to *any* position in the frame that holds it. This permits of printing figures only.

If it is desired to have a character to precede or follow the figures, they can be constructed to accomplish this.

The plungers that operate the mechanism strike on the tympan *outside* of the sheet of paper being numbered. Or, if the rollers are cut, it will prevent inking the plungers, which, under certain conditions, permits of using frames, accomplishing results that otherwise would have to be attained by a double operation.

Frames can be made with a "lug" on each end, so that the "lug" could extend under the chase, providing the chase is cut out to receive it. Or, the frames can be made with "lugs" with holes in them, so that they can be screwed to the bed of the press without the use of a chase. The price depends on the quantity ordered at one time.

The American Type Founders Company is in a position to hustle your orders for Numbering Machines both intelligently and promptly at prices which are right. It invites correspondence on this subject as well as on all other printing trade matter.

Mammoth Wetter

Mammoth Wetter

These machines are used for all purposes where large figures (one-quarter inch high and over) are required for numbering baggage checks, bicycle checks, or other work that requires larger figures than can be furnished with a type-high machine. These machines are made with a "blank" plunger at side, unless otherwise ordered.

These models are all more than type-high.

Bed of press must be cut out or platen adjusted, so that machine can be lowered to bring the face of figures to height of type.

The plunger is of special shape, and so adapted that the machine can be worked in *any* position in the form.

These models can be made on special order—with letters to spell out the figures in English, Spanish, French, etc.—under or over each figure. Can also be made so that figures are enclosed within parentheses thus: (36589). Other combinations or styles of figures can be made to produce almost any result desired—and to prevent counterfeiting.

Order by Model Number

210	4	2345	1½	$53 00
186	5		1½	55 00
181	6		1½	60 00
214	7		1½	65 00
204	3	345	1½	54 00

143	5		1½	56 00
205	6		1½	60 00

The Midget Wetter

Is made entirely of steel, and is the smallest type-high numbering machine made by any manufacturer in the world—for immediate delivery. Designed to meet the demand for a small machine with figures large enough for ordinary commercial uses, and which can be depended upon for accurate work.

The Midget Wetter
Size 11 16x1⅝ inches

The Midget has an attachment for printing any one number, any number of times, without taking it from the form.

The "No." slide preceding figures can be removed without taking machine from the form.

Model 115
32356
5 Wheel, $18 00

Model 116
123687
6 Wheel, $20 00

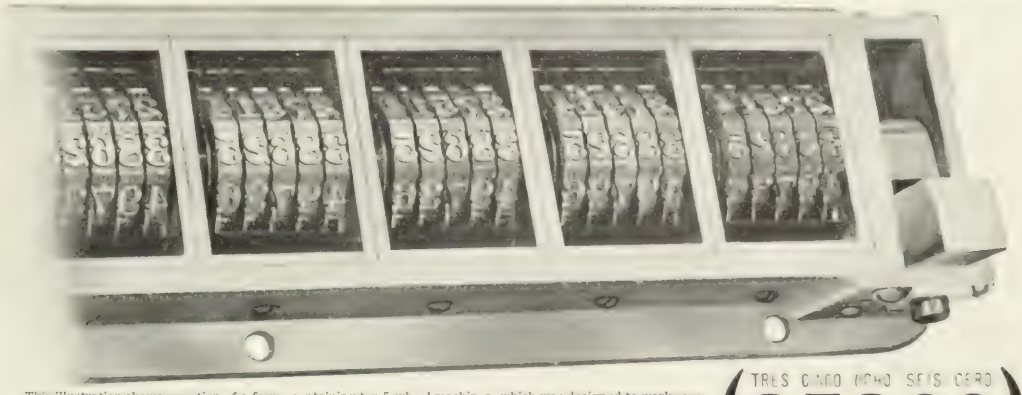
Special Model Wetter

Designed for special work requiring spelling above or below the figures; made only with large figures, 5-16 inch high, or larger.

The height of the machine is determined by the style of figures selected—necessarily higher than type, necessitating cutting out the bed of the press in order to bring the faces of the figures to type-high.

Can be made with the ciphers to depress so that one or more figures print as desired; thus (1) or (99999), each number printed being enclosed within parentheses.

Or, they can be constructed *without* depressible ciphers, so that five figures would always print; the parentheses being rigidly fixed at each end of the line of figures, thus when printing 1 it would appear (00001), or, when three figures are being printed the impression would appear (00999); or, when five figures are printed, thus (99999); the parentheses always remaining in one position.



This illustration shows a section of a frame containing ten 5-wheel machines, which was designed to work on a 14x20 inch Gordon Press, and shows model 57 figures, with Spanish spelling above each figure.

(35860)
Model 57 Figures

This model can be made in gangs—say ten machines in one frame, operated by plungers at each end of the frame—for use on the regular platen or flat bed perfecting presses; or, can be made for special designed fast running rotary web presses. Can be made to number either forward or backward; but a machine constructed to number *forward* will not number backward. Can be made with or without parentheses to enclose the figures. Parentheses can be either rigidly fixed at each end of the line of figures, or made so that they slide, enclosing either one, two, three, four or five figures thus: (1), (11), (111), (1111), (11111).

The machines can be made to skip numbers, to print one number fifty times or one hundred times, and many other combinations.

State your needs, and a machine can be made to meet your requirements.

The nature of the work for which these machines are used oftentimes requires five (5) of these figures to be printed in a small space, and in very many instances they are printed in a row of ten, each set of figures close together. In order to accomplish this the machines must be made in a frame to hold the ten machines, and with the operating plungers (one at each end of the frame) that print on the "tympan" outside of the sheet of paper being printed.

As the conditions and the style of press on which the machines are worked are so varied, it is necessary when making inquiries in regard to this special machine to give particulars; that is, the style of press on which the machine is to be worked; the size of the bed of the press; the *exact* size of the full size sheet of paper, and a pencil diagram showing the different sections on which the numbers are to be placed; and the *exact* location of each number on *each* of these spaces.

Also the way in which the rollers cross the form, whether parallel with the line of figures or at right angles to the line of figures; and also state the "gripper" edge of the sheet.

(35860)
Model 25 Figures.

If worked on a platen press, state whether the top of the figures are to be worked to the "guides" or to the top of the chase.

This model is also made for use on special designed fast running curved bed rotary presses.

The machines are operated by shaft connecting all (no plunger being necessary) and the lever and cam roll can be made to suit the press mechanism.

(35860)
Model 35 Figures.

If the proper specifications accompany the inquiry, information can be furnished promptly. As the style of figures vary, we show herewith some of the regular styles that can be furnished promptly.

Wetter Type-High Numbering Machines

The Standard Model

Can be locked in the form, the same as type, by itself, or surrounded by type to number and print at one impression, as all the figures can be properly inked; and is the only machine that can be successfully used on either a cylinder or job press.

Each impression of the press automatically changes the numbers. The Wetter is operated by plunger containing the word "No." to precede the figure. This "No." slide is *removable without taking the form from the press*, and any other character, such as "A," "B," asterisk, or a small black star ★, etc., can be inserted in its place in a moment.

With each machine we furnish a "blank" slide to use in place of the word "No." when working the machine on a job press, and when it is more desirable to have only the figures print by using a "frisket."

Wetter Model 125 Actual size ⅛x1½ inches; consecutively numbers from 1 up to 99999. Prints figures like this impression

№ 12356

FACSIMILE IMPRESSION

Model 125—5 Wheel, List price **$10 00**

THE SIDE-PLATES are "roughed" or "knurled" in place of being smooth, highly polished or "damaskeened," which prevents the machine from "riding-up" or falling out of the form. Doesn't have to be "locked up" so tightly.

THE DROP-CIPHER is of new construction, and is the only one that can be guaranteed not to get low, even under very hard usage—the life of a machine depends on this detail of construction.

A DISTINCT ADVANTAGE. Each machine is equipped with a "hold-down" screw for rigidly holding the plunger inoperative, so that any number may be printed a definite number of times.

THE PLUNGER is *lower* than others, permitting work on *any* cylinder press, and it is not necessary to remove the plunger at *any* time. Plunger is so arranged that the "No." slide can be removed without taking the machine from the form, and a letter or character of any kind inserted to precede the figures.

THE SHAFT can be easily removed when making changes from consecutive to skipping. Not necessary to remove plunger to do this.

ENGRAVING. The wheels are made of hard steel; the faces of all figures are perfectly *flat*, and the figures are cut *deep*, insuring a clear impression.

THE WETTER is constructed of the best materials; parts are hardened where necessary; workmanship is the best possible to produce.

THE CIPHERS on all models can be depressed so that the first impression would appear thus: No. 1, the figures and ciphers coming to the plane of print automatically when required. Or, if it is desired to print ciphers to precede the number being printed, do not depress the ciphers, and the first impression will appear thus: No. 00001.

All models have a drop-cipher on wheel next to plunger—the only machine having this feature.

As regularly made, all models number forward, advancing consecutively from one (1) up. The five-wheel machines are entirely automatic. The six-wheel machines are automatic for five wheels only, and the sixth wheel must be turned by hand as required.

Machines that number *backward* do not automatically depress the drop-cipher; they must be depressed by hand.

Any model can be made, on special order, at an extra charge, to duplicate, triplicate, quadruplicate, sextuplicate, etc.

Machines can also be made to print each number a certain number of times, that is, print each number ten times, twenty times, thirty times, etc., and then advance to the next higher number.

The combinations that can be made with special designed machines are so varied that it is oftentimes possible to combine twenty or thirty combinations in *one* machine by simply changing ratchets that are furnished with each machine.

If your wants are fully stated a machine can be furnished to meet your requirements. For numbering checks with stubs, any number to a page, "skipping" unit wheels are necessary; these are interchangeable with the consecutive unit wheels furnished with each machine, and can be adjusted to machine by any printer. We will send a little pamphlet telling all about them on request. Any Model Wetter Numbering Machine can be made on special order to number backward at same list price as regular models that number forward.

Skipping Wheels (to skip any *one* number only from two to nine), each **$2 00**
Letter Slides to take place of the "No." Slide (one letter), each **50**
Letter Wheels, each **1 50**

The Better Wetter (Plungerless)

For use with or without type on printing presses. It is the *only* typographic numberer that prints nothing but the figures, without "No.," a period, or any other prefix or suffix intended to act as a plunger or to prevent the printed sheet from being smeared by the revolving figures.

The pressure of the platen or cylinder on the figures operates the mechanism, which changes the numbers, and also brings into action ingenious bearers which rise automatically and hold the printed sheet off the figures while they are changing. These bearers do not print on or indent the paper.

The Better Wetter is made of the best materials throughout, and all parts are hardened where necessary, insuring great durability, perfect accuracy, and long life.

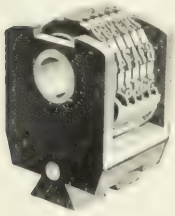
All machines on this list are type-high and are one and one thirty-second inches wide, the length varying according to style of figure selected.

Special Numbering Machines

Designed for fast-running presses with curved bed, for rapidly numbering tickets, sales slips, coupons and other work that will not admit of using the regular form of numbering machine. One or more are operated by one shaft connecting all; are made to order with or without drop-ciphers, and to number either forward or backward. These Special Machines can be constructed to make any combinations desired; to duplicate, triplicate or skip numbers; print each number any number of times; to print up to almost any given number and repeat, etc.

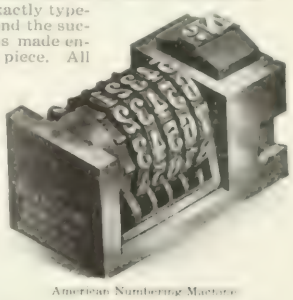
When writing explain fully what you are called upon to produce; give combination of numbering; size of full size sheet; the size of each section of sheet to be numbered, and the exact position where numbers are to be printed on each section; also give name of press on which they are to be used, and if for special designed presses, we should have a blue print or sketch, with dimensions, showing where the numbering head can be placed and what connection to operate them.



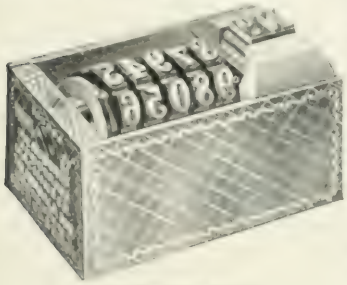
Model 60

American Numbering Machines

The American Numbering Machine No. 30 is a new model, designed to be locked in a form, the same as type, either with or without type matter. Machines of this character are used with entire success on both cylinder and platen presses. The printing face of the figures is exactly type-high and as the impact of the press takes place the plunger is depressed and the succeeding number is brought into printing position, ready for inking. It is made entirely of steel, including the cases. The plungers are made of bar steel and constructed in one piece. All machines are fitted with steel wheels and are engraved with figures as shown in illustration.



American Numbering Machine



Roberts Numbering Machine Model 27-A

Drop-ciphers are constructed of tool steel and are guaranteed. All parts are quickly released and machines are easily re-assembled in one-half minute. Skipping unit wheels are furnished, skipping automatically any number desired from one to ten, interchangeable with regular consecutive unit wheels. Model No. 30 is $1\frac{19}{32}$ inch in length by $\frac{7}{8}$ inch in width and numbers forward. Price, American Model No. 30, five wheels, $5.00. American Model No. 31, six wheels, $6.00.

№ 12345

Impression of Figures

Roberts Numbering Machines

The Roberts New Model No. 27A Numbering Machine is generally used by printers for ordinary job work. It is constructed to be used with any press made to print from type, and meets the requirements of any ordinary printing establishment perfectly. It is type-high and is locked in the chase with the form like a small cut. It can be used separately or wholly surrounded with type matter. As an impression is made, the impact of the platen of the press actuates the prefix-slide "No." and a figure disc is advanced automatically in consecutive order from 1 to 99,999. Machines are also furnished which number backwards, so as to avoid turning the sheets. For numbering checks, orders, strip tickets, etc., "skipping" wheels are necessary. These skip automatically any number from 1 to 10 and are interchangeable with regular consecutive unit wheels. The No. 27A Numbering Machine is operated by a steel spring of great power and unusual elasticity, insuring correct numbering without the neccessity of constantly watching the sheets. The machine may be taken apart in an instant for cleansing and is as quickly re-assembled. Price, Roberts Numbering machine No. 27A, $10.00. Model No. 28A, six wheels, $12.00.

№ 12345

Impression of Figures

Bates Hand Numbering Machines

The Bates Hand Numbering Machines represent the result of many years' experience in the manufacture of numbering machines. They will number consecutively, will duplicate each number before passing to the next, or will repeat the same number as often as may be desired. These three different movements are attained by simply moving the pointer on the dial. This operation takes but a moment, and does not soil the hands. Any color of ink may be used and the pad recharged or a new one substituted very quickly. When the machine is not in use the figures rest on the ink pad, and are therefore always ready to make a perfect impression at once. The machine automatically inks itself after each impression.

Bates Hand Numbering Machine

All the printing is done from solid steel type. The impressions are as true as those from a die. As there are no ratchet wheels between the figure dies, there is no lost or irregular spacing between the figures. The symmetrical printing of the Bates stamp with the perfect alignment are salient features.

The Bates seven movement machine has the same frame and style as the three movement, except for the dial and the additional movement necessary in a seven movement machine. It numbers consecutive, duplicate, triplicate, quadruplicate, sextuplicate, twelve times and repeats.

Prices of Bates Hand Numbering Machines

4 wheels, numbering to 9,999	$12 00	Seven movement, 4 wheels	$12 00
5 wheels, numbering to 99,999	14 00	Seven movement, 5 wheels	14 00

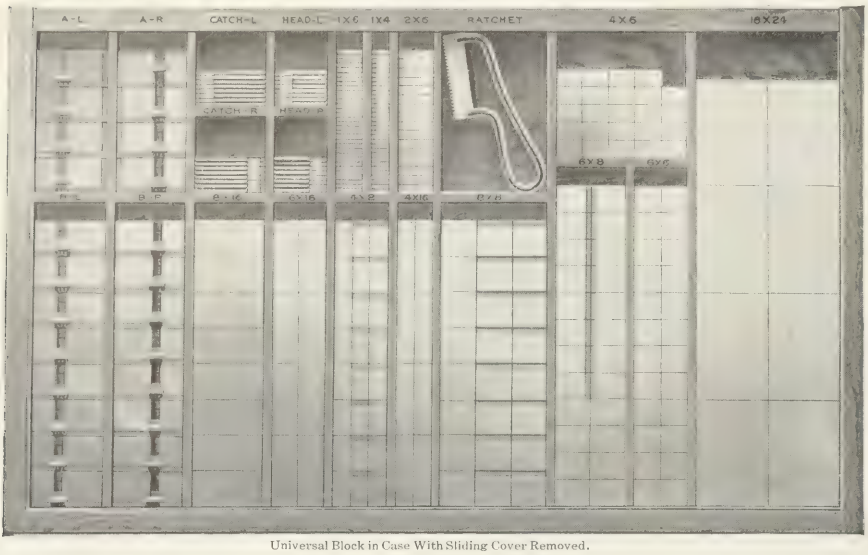
Rouse Universal Block System

The Rouse Universal Block System is a very simple and quick scheme for mounting plates. The blocks have many advantages, the principal one being the great speed which is made possible in make-up; varying sizes of pages have been actually assembled ready to lock up in from fifteen to fifty seconds, or at the rate of sixteen pages in from five to twenty minutes. The Universal Block permits the work to be done on the stone, or on the press in running. One can clamp or release plates by this system at least three times as fast as on a grooved bed. It is adapted for fine register or ordinary black work. The hooks and catches can be placed where desired, as they are in separate units. Each set or font is complete in itself, so there is no occasion for sorting up.



Universal Block in Case With Sliding Cover Removed.

The Universal Hooks are extremely rapid, yet capable of fine adjustment for register work. They are simple and very strong in construction. The jaw is operated by a ratchet for clamping or releasing plates. The catches are of brass and cannot possibly work up on the press. A margin is allowed of three-eighths of an inch between plates. The bases are of iron. Point system. With a single set or font, eight pages can be made up into one hundred and sixty different sizes, ranging from seventeen by twenty-five up to and including thirty-five by fifty-one ems pica and a less number of larger pages into an endless variety of shapes and sizes, all with a variation of two picas in width or length, or in both width and length.

Universal Hook AL

The up-to-date printer should always be familiar with all the latest ideas in patent blocks. The American Type Founders Company handles the very best and most extensive lines on the market, and at all times is prepared to demonstrate their value. The printer who desires to economize time and money and to place his business on a well paying basis, should from the very outset acquire the proper facilities for conducting his business on the most economical basis. The Rouse Universal Block System is one of the very best schemes known for mounting plates, in fact it goes a great way towards solving the block system. The method embraces a wide range of sizes, sufficient to meet all eventualities and always effects a great saving in making ready.

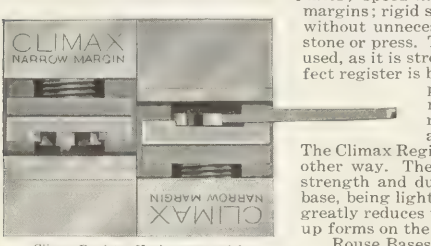
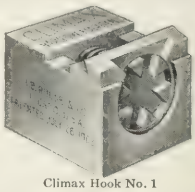
Climax Register Hooks

A perfect plate mounting and registering system must possess certain essential features, such as an unyielding and perfectly even base; absolute control of the plates; speed in clamping and releasing plates; rapidity and exactness in make-up; narrow margins; rigid support for the entire plate; strength and durability without unnecessary weight and ability to make up forms on the stone or press. To secure the perfectly even base, cast iron has been used, as it is stronger and more rigid than any known alloy. A perfect register is best secured by absolute and individual control of the plate. To do this there is only one way, by means of register hooks. Speed is essential. By means of the register hooks and bases great rapidity has been attained. Narrow margins effect a saving in paper. The Climax Register Hooks permit much narrower margins than any other way. The iron bases provide a rigid plate at all points. For strength and durability the hollow iron bases form an almost ideal base, being light and indestructible. The system of mounting plate greatly reduces the waiting time of the presses, as with register hooks and bases one can make up forms on the stone or on the press.



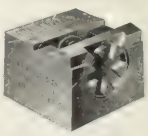
Climax Register Hooks arranged for Minimum Margin



Climax Hook No. 1

Rouse Bases are made of the best gray iron, accurately machined to the point system. They are light, yet strong and rigid. They are comprised in a unit system composed of eight by eight em units, each unit being occupied by either a unit base or a hook and its justifiers. A unit may be lifted and a hook with its justifiers substituted.

The body of the Climax Register Hook is made of hard drawn brass and a threaded steel bushing which can be replaced in case of wear is inserted in the rear wall. This permits a finer thread and thus a finer adjustment is insured. The jaw is made of steel the full width of the body. This prevents the jaw destroying the register. The head of the screw is let into the back of the wall and forms an effectual shield to prevent scratching or burring. The recess in the back of the jaw permits the narrow margin of eight points. The screw is of hardened steel and is keyed to the jaw, thus forming a two-piece hook, the very essence of strength and simplicity and the easiest possible hook to clean. The jaw has a movement of about sixteen points.



Climax Hook No. 2

The Climax Register Hooks are made in two sizes: No. 1, four by six ems, is especially adapted for very small plates with extremely narrow margins, such as post cards. No. 2, six by six ems, has been designed for all narrow margins.

Suddard Block System.

There are certain essentials which should be embodied in every patent block, namely, ease of make-up, unlimited range of possibilities in the size and shape of plates which the block will handle, absolute accuracy and strength which means rigid, unyielding impressions, and a lock-up which can be accomplished without resorting to the use of "Dutchmen" or slips of paper between the blocks in order to get the form to lift. The hooks should be of the right size and construction to insure ease of handling and at the same time permit them to be placed at any point of the page desired. This latter feature is found especially desirable where soldered plates are used, as the hook can then be placed to hold the plate at the soldering line, thus, even though the plate cracks in the run, it will still be held down in position and will print just as well as though the plate were in one solid piece as when originally put on the press.

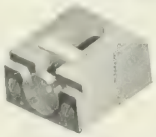
Cut No. 1. Shows page 25x41 picas outside. Three hooks and three brass catches to page. For book or catalogue work.

Any practical printer will agree that the points mentioned above are important ones, and will want them incorporated in the block he desires to buy. A description of the Suddard Block System follows:

This system is made up in pages and multiples thereof. Each page consists of parts as shown in illustration No. 1. The largest size plate which one page will accommodate is thirty-seven by fifty-two picas. The outside measure of the page is thirty-nine by fifty-five picas. The pages are made up of a combination of cast iron sections ranging in size from sixteen by twenty-four down to one by eight ems and have been so selected that it is possible with this system to handle any size page from seven by eleven picas up to the full size of a single page of the block, or larger, by the addition of more sections. Around two sides of the block the sections are made with a shoulder which permits the use of a ratchet to operate when ratchet hooks are used. The shoulder which is made on these blocks will be found to save considerable time in the making up of book pages. The hooks used with the Suddard Block System are made either with a steel ratchet wheel or with a slotted wheel which is actuated by a pin wrench, a more accurate and positive method of moving the clutch—especially desirable on register work. The hooks are made eight by nine ems in size. The top surface of the hook is eight by eight ems. The one em additional is for the gutter.

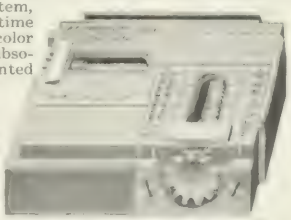
Cut No. 2. Page 25x41 picas. Made up with only nine simple pieces.

Cut No. 4. Hooks are made of iron and steel. Illustration shows one for book work with ratchet for quick changing of plates



Cut No. 5. This is the hook for register work, with accurate pin-actuating clutch

With standard sets of blocks the ratchet hook is furnished. On order, however, the register hook will be supplied instead of same, without extra cost; or where both styles of hooks are needed, the extra part will be furnished so the hook can be used on either class of work at the price of twenty-five cents each. The construction of the hook is cast iron. The hooks are durable and accurate and it will be found that they will lock better in the form as they are of cast iron, same as the other sections. The principal advantages of the Suddard Block System are briefly given as follows: Make up to any size of page. Narrow margins where necessary, down to three-eighths inch. Wide bearing on clutches and hooks to prevent digging into plates. Point system, so type may be used in form. Absolutely accurate, rigid and unyielding; reduce make-ready time and hold up under heaviest forms. Quick change of plates on book work. Hair-line register on color work. Quick make-up, because of simplicity and few pieces. Hook and catches can be placed absolutely any place desired on page, a big advantage where soldered plates are used. Our patented hooks (same as we use on our other styles of blocks) cannot work loose. They stay where they are put. No grooves to injure underlays. Indestructible—because made of iron and steel. On illustrated work especially, it is admittedly advisable to mount plates on a solid, unyielding surface. No shrinking or warping occurs and thus accidents are less liable to happen than when wooden blocks are used. Sometimes in the past, where sectional blocks were used on book work, it was the custom to fill in the space with low slugs. This entailed the loss of considerable time and was unsatisfactory at best. Very often these low slugs would work up during the run, causing offsets. Occasionally they got out into the forms, smashing plates and doing considerable damage. As a time and labor saver the Suddard Block System not only avoids all these contingencies, but cuts down the time on the make-ready from one-quarter to one-half, and reduces the number of overlays and underlays necessary.



Cut No. 3. This is a real, practical small page. Size out side, 14x17 picas.

Price List of Suddard Blocks

Equipped with patent narrow margin hooks, travels five picas, standard block height. All on the point system.

Price per set of 8 pages	$ 55 00	Price per set of 32 pages	$215 00
Price per set of 16 pages	109 00	Dust-proof cases to hold 8 pages, each	1 00

Each page is made up of all the parts as listed below, consisting of thirty-nine pieces to make up one Suddard Block. Blocks take plates within two ems of their size and also seven picas smaller and reduce regularly by two ems.

Each Page Contains	Price Each Piece	Each Page Contains	Price Each Piece
Three 8x9 Narrow Margin Hooks, cast iron, with gutters	$0 90	Three 8x8 Cast Iron Sections	$0 10½
One 9x9 Cast Iron Corner Section, with gutter	13	Four 4x8 Cast Iron Sections	08⅓
Five 8x9 Cast Iron Sections, with gutters	12	Three 2x8 Steel Sections	05
Two 4x9 Cast Iron Sections, with gutters	12	One 4x6 Cast Iron Section	08
Two 2x9 Steel Sections, with gutters	06	One 2x6 Steel Section	05
One 16x24 Cast Iron Section	50	One 1x8 Side Slug Steel	02½
Three 8x16 Cast Iron Sections	20	Three ½x12 Brass Catches	15
Two 4x16 Cast Iron Sections	10	Two 2x4 Steel Sections	04½
Two 2x16 Steel Sections	09		

Individual parts may be ordered extra at the above prices.

One ratchet supplied with each set, of either eight, sixteen or thirty-two pages. Three hooks and three brass catches figured to each page. All nine-em pieces are grooved with gutter for ratchet. The ratchet wheel may be changed to pin-actuated wheel for register work without extra charge, when desired, or sold extra at twenty-five cents each. Largest block thirty-nine by fifty-five picas outside, largest plate thirty-seven by fifty-two picas outside. Smallest block thirteen by seventeen picas outside, smallest plate seven by eleven picas outside. Thirty-nine by fifty-five picas is the largest block of which eight, sixteen or thirty-two pages may be made with regular sets. Any size of page may be made by additional pieces, or a smaller number of large pages can be made. For example, with a set of thirty-two blocks, sixteen pages can be made up to fifty-five by seventy-eight picas.

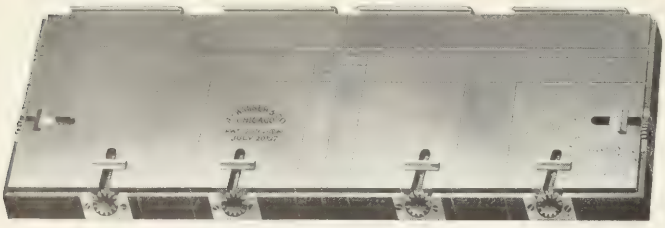
Wilson Adjustable Patent Blocks

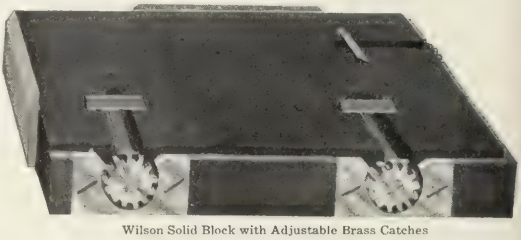
In the Wilson Adjustable Patent Block an effort has been made to meet the varied requirements of the printer, that is, to supply a block to take practically every size page, and all classes of work, and to do all this quicker and better than with existing appliances. The Wilson block is made up of pieces, some of which are complete blocks in themselves, others are extensions used in the making up of complete blocks in the various standard or odd sizes desired. The pieces are arranged in sets or fonts, suggested by extensive experience. These sets are in two styles, "A" and "B." These two styles combined are generally used. Standard sets are made up in four, eight, sixteen or thirty-two of such pages, and are placed in special cabinets made to hold and protect them from loss or damage. The range of sizes possible with the Wilson Adjustable Patent Block is very large, running from two and one-half by three and one-eighth to thirteen and three-eighths by sixteen inches. With set "A" forty different sizes may be obtained, and with sets "A" and "B" combined eighty-two. All pieces are made with a view to having the least possible weight; they weigh one-third that of type, and from twenty-five per cent to fifty per cent less than the average solid block, thus insuring light forms, and at the same time good rigid impressions. The hooks are patented, narrow margin ones, very quick to operate, and made from steel. They will not break under severe strain, cannot work up in the form, and give the smallest possible margin. All parts of the Wilson Blocks are finished to micrometer measurements, the standard used being the point system, so type may be used in the same form if desired. All parts are interchangeable, and absolutely the same in height. These are the only blocks made with interchangeable ends and side catches, so that they will fit on the key-block or extensions as required. The arrangement of the blocks is so simple that the make-up in the composing room is reduced to a minimum. Any job office will find these blocks of exceptional value, as they are adapted for all kinds of job work where electrotype plates are used. They save the cost of mounting, as well as in many other ways, and cost less per inch than any iron or steel blocks on the market.



Showing a long narrow page made with Wilson Blocks

The Wilson Patent Solid Iron Blocks

The Wilson Patent Solid Iron Blocks are made to take the standard book sizes without the use of extensions. They are supplied with patented narrow margin steel hooks, have extension brass catches, and are made as light as is consistent with strength. Extensions may be used with them when desired, making it possible to obtain practically any size page desired. Iron blocks are furnished with two side and one end hooks, except the three large sizes. These are supplied with three side and two end hooks. All the hooks have patented narrow margin steel clutches. The price is no more than that of the old style stereotype blocks, while the possibilities and value of the new style far exceeds the old.



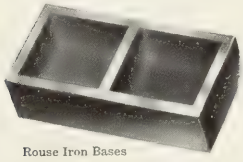
Wilson Solid Block with Adjustable Brass Catches

Prices of Wilson Patent and Iron Blocks

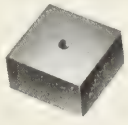
Owing to the great diversity in sizes and parts of the Wilson Patent Adjustable and Iron Blocks we are unable to give the price list in full. If however you will kindly state your requirements, we shall be pleased to send you full details with prices. There is nothing required of blocks of this nature which cannot be covered by the Wilson Patent Adjustable Blocks in some one of the various combinations of which they are capable.

Rouse Unit System Bases

In the Unit system the entire form is made up of 8x8 em units, each unit of space being occupied by a unit base or a hook with its justifiers. The Rouse Unit System Bases are made of cast iron and are accurately machined to the point system. They are as light as is consistent with the work desired of them and are practically indestructible. In presenting an even, unbroken and unyielding surface to the plate, they greatly reduce the time required for make-ready as well as increase the life of the plates. Rouse Unit Base, 8x8 ems.



Rouse Iron Bases



List price $0 20

Challenge Cast Iron Sectional Blocks

These Blocks are made in a greater variety of sizes than the steel ones. They are as light as consistent with strength and are thoroughly braced and ribbed. Being finished on the point system, and to micrometer measurements, they will work perfectly on the same form with steel and metal sections.

Challenge Metal Sectional Blocks

Metal Sectional Blocks are made from extra hard metal, cored on their under side to lighten them. They are sufficiently heavy for the finest impressions of halftone or heavy tint plate. Being made on the point system, they are accurate and reliable at a low price. They hold the plates securely, save considerable time in the make-ready and are as easy to make as metal furniture. With proper care they will last indefinitely.

Sizes 16x16, 8x16, 8x8, 4x8, 2x8, 2x6, 2x4, 1x8, 1x6 and 1x4

Challenge Steel Sectional Blocks

Steel blocks combine in the highest degree accuracy, rigidity, strength, durability, lightness and convenience. They are micro-ground, without grooves, and thus form a faultless base. Their value in ease of assembling, their general adaptability and the saving of time effected by their use in make-ready, cause them to be indispensable in the modern printing office. They are constructed on the point system, and they are in every way qualified to fill any of the requirements of the printing office where blocks of such a nature are necessary.

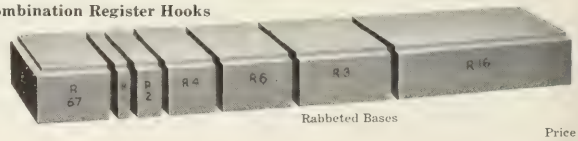
Prices quoted on Sectional Blocks are subject to liberal discounts.

Rabbeted Bases

For Use with Combination Register Hooks

Seven em Rabbeted Bases are to be used in connection with Combination Register Hooks. Their use makes it unnecessary to use low slugs or reglets, the rabbet forming a channel or gutter for the ratchet to run in. These bases also do away with justifiers and greatly facilitate the rapid making-up of pages with the Combination Hook.



Rabbeted Bases

	Size	Rabbeted	Price

Mills Two-Heights Iron Newspaper Bases

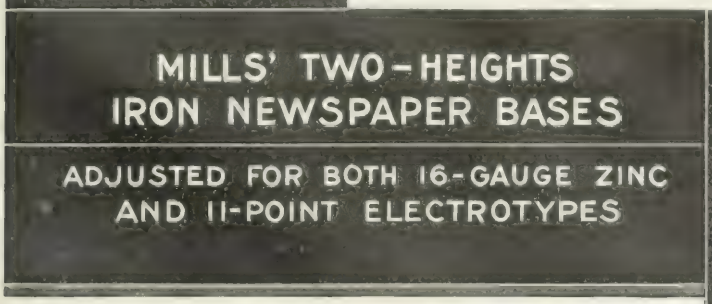
(Patent pending)

The Two-in-One Bases. These bases have the extraordinary merit of holding either sixteen gauge zinc or eleven point electros or stereos at type height. They are reversible; in one position they accommodate sixteen gauge zinc, but when reversed accommodate eleven point electros. In using all other kinds of newspaper bases two fonts are required to do the work of one font of the Mills Two-Heights Bases. An investment of (say) $18.00 in two-heights bases is almost equal in service to an investment of $36.00 in ordinary iron bases. Mills Two-Heights Bases are sold at the same list prices as the ordinary one-height newspaper bases, although almost one hundred per cent better value.

Two-Heights Base, Actual Size, End View

We say "almost" one hundred per cent better value, because the twelve point and six point justifiers are not reversible, and a small separate supply of these for each height (sixteen gauge zinc and eleven point electros) are included in each font. Catch Bases, which are not included in fonts, and are not reversible, are sold per piece. These bases are solid iron, and superior to cored bases, because a matrix is dried quicker on solid bases for reasons obvious to every expert stereotyper.

The economy of using labor-saving iron bases in preference to cast-to-order



Two-Heights Bases, with Justifiers and Catch Bases, made up to hold a cut of irregular shape

stereotype bases is indisputable. In addition, the convenience and avoidance of errors, and the greater accuracy and fewer number of sizes in fonts, are qualities in themselves decisively in favor of the Mills Two-Heights Bases. Mills Two-Heights Bases can be made to order to accommodate other thicknesses of zinc and electros or stereos, at special prices.

Fonts G, H, K, L, M and N are assorted for those who require one height only.

Catch Base for Electros

Catch Base for Zinc

List Prices of Mills Two-Heights Iron Bases

Fonts do not include catch bases or half column bases, which are sold by the piece. Single column is any width not exceeding fourteen pica ems; half column is any width not exceeding seven pica ems. In ordering, it is necessary to state widths of columns and column rules.

The smallest font fills one column of the standard size eight-column newspaper, and this length of column is the unit in larger fonts, enabling the purchaser to ascertain exactly which font or how many fonts will meet his requirements.

Unit Fonts for Two Heights

These fonts are assorted for columns of the standard eight-column newspaper, twenty-four inches by thirteen picas. All unit fonts for two heights contain twenty-eight pieces of two-heights bases (Fig. A), and twelve each six and twelve point justifiers for sixteen-gauge zinc height and twelve each six and twelve point justifiers for eleven-point electros height—seventy-six pieces in all. The areas given are based on zinc height.

UNIT ONE-COLUMN FONT A—76 1-col. pieces, assorted (as above), covering 52 square inches . . . $12 00

UNIT TWO-COLUMN FONT B—76 2-col. pieces, assorted (as above), covering 106 square inches . . . 20 00

UNIT THREE-COLUMN FONT C—76 3-col. pieces, assorted (as above), covering 160 square inches . . . $29 20

UNIT FOUR-COLUMN FONT D—76 4-col. pieces, assorted (as above), covering 214 square inches 37 20

Combination Two-Heights Fonts

COMBINATION FONT E—438 pieces, covering 432 square inches or the area of one page of standard size 8-column newspaper . . . $88 60

Contains the following two-heights bases (Fig. A): 1 column, 112; 2-column, 28; 3-column, 18; and the following six and twelve point justifiers: 1-column, 96 each; 2-column, 21 each; 3-column, 20 each (half for zinc and half for electros).

COMBINATION FONT F—219 pieces, covering 216 square inches or the area of a half-page of standard size 8-column newspaper . . . $44 30

Contains half the number of pieces in Font E.

Unit Fonts for One Height

In ordering, it is necessary to state whether these fonts are required for sixteen-gauge zinc or eleven-point electros. The bases are two heights, and these fonts differ from two-heights fonts in having justifiers for one height only. By adding justifiers for another height these fonts may at any time be made completely available for holding both sixteen-gauge zinc or eleven-point electros.

All unit fonts for one height contain twenty-eight pieces of two-heights bases (Fig. A), and twelve each six and twelve point justifiers for either sixteen-gauge zinc or eleven-point electros, as ordered. The areas are based on zinc height.

UNIT ONE-COLUMN FONT G—52 1-col. pieces, assorted (as above), covering 52 square inches . . . $10 20

UNIT TWO-COLUMN FONT H—52 2-col. pieces, assorted (as above), covering 106 square inches . . . 17 00

UNIT THREE-COLUMN FONT K—52 3-col. pieces, assorted (as above), covering 160 square inches . . . $24 40

UNIT FOUR-COLUMN FONT L—52 4-col. pieces, assorted (as above), covering 214 square inches 31 20

Combination One-Height Fonts

In ordering it is necessary to state whether these fonts are required for sixteen-gauge zinc or eleven-point electros.

COMBINATION FONT M—298 pieces, covering 432 square inches or the area of one page of standard size 8-column newspaper . . . $74 40

Contains the following two-heights bases (Fig. A): 1-column, 112; 2-column, 28; 3-column, 18; and the following six and twelve point justifiers: 1-column, 48 each; 2-column, 12 each; 3-column, 10 each.

COMBINATION FONT N—149 pieces, covering 216 square inches or the area of a half-page of standard size 8-column newspaper (half of font M) . . . $37 20

Prices of Two-Heights Bases, per Piece

Each (Fig. A)—½-column, 15 cents; 1-column, 30 cents; 2-column, 50 cents; 3-column, 70 cents; 4-column, 90 cents.

Prices of Catch Bases

As illustrated in Figures B and C. In ordering, state whether for sixteen-gauge zinc or eleven-point electros.

Each (Figs. B or C)—½-column, 25 cents; 1-column, 50 cents; 2-column, 90 cents; 3-column, $1.25; 4-column, $1.50.

Justifiers

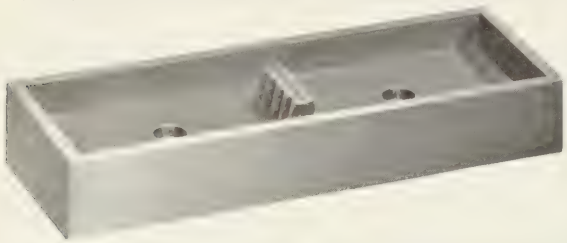
In ordering, state whether for sixteen-gauge zinc or eleven-point electros.

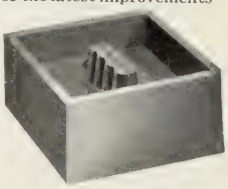
Six Point, each—½-column, 3 cents; 1-column, 5 cents; 2-column, 10 cents; 3-column, 15 cents; 4-column, 20 cents.

Twelve Point, each—½-column, 5 cents; 1-column, 10 cents; 2-column, 15 cents; 3-column, 25 cents; 4-column, 30 cents.

Cast Iron Furniture

Cast Iron Furniture is especially designed to take the place of wood or metal furniture. It is made exceptionally light in weight, but is so well braced that it will stand the greatest lock-up strain without being affected in any way. One of the latest improvements to Cast Iron Furniture is the addition of a corrugated projection in the center of each piece. This projection practically performs all the purposes of a handle, as it is cast as a part of each piece, three by ten ems or larger, and is easily grasped by the thumb and forefinger. It assists materially in the manipulation of the furniture and adds just that perfection of detail which this style of furniture demanded. It dispenses entirely with the necessity of using a knife blade or bodkin between the pieces to raise them and avoids the danger of more or less damaging adjacent pieces when one of them is used as a fulcrum. The corrugated projection enables one to readily lift a piece from a form, thus avoiding damage and saving time and money by the operation.





This Cast Iron Furniture is guaranteed to be on the point system both ways. It possesses point system exactness. The corrugated projection facilitates handling, saves the furniture and economizes time. It is forty per cent lighter than regular furniture and many times stronger. Being harder than type metal it will hold its accuracy longer and is therefore more economical in use. With ordinary care in handling it will last indefinitely. It is not easily dented or affected by heat. It makes lighter forms. It is in accordance with the line of modern improvement, which calls for iron imposing surfaces, iron stereo tables, iron composing stands and fire resisting qualities. The corrugated projection entails no additional expense.

List Prices of Cast Iron Furniture and Dimensions and Number of Pieces in each Font

Font A, 392 pieces. List price $32 00

Font A contains twelve pieces each of 3x5, 4x5, 5x5, 3x6, 4x6, 5x6, 6x6, 3x8, 4x8, 5x8, 6x8, 8x8, 3x10, 4x10, 5x10, 6x10, 8x10, 10x10, 3x15, 4x15, 5x15, 6x15, 8x15, 10x15, 3x20, 4x20; eight each of 5x20, 6x20, 8x20, 10x20, 3x25, 4x25, 5x25, 6x25, 8x25 10x25 ems.

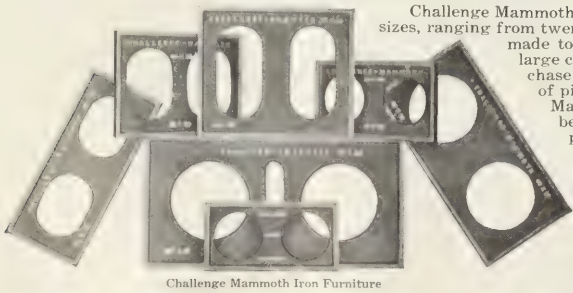
Challenge Mammoth Iron Furniture



Challenge Mammoth Iron Furniture

Challenge Mammoth Iron Furniture is made on point system in seventeen mammoth sizes, ranging from twenty-five by fifty to fifty by one hundred ems pica. Special sizes made to order. This furniture is a great convenience in dressing out a large chase when locking up a small or open form, or in locking a small chase on the press bed. In addition, the cutting down of the number of pieces used in locking provides an efficient remedy for "work-up." Mammoth Iron Furniture is sold in fonts or by the piece as may best suit the customer. The prices for labor-saving fonts will be promptly furnished upon request.

Radio-Iron Imposing Surfaces

Top side of Radio-Iron Imposing Surface, showing wide beveled rabbet

No one questions the superiority of iron imposing tops over the marble slabs, and in the Radio-Iron Imposing Surfaces printers are offered the very best working tables yet produced. The materials in Radio-Iron Imposing Surfaces are of special compound, which produces a hard, tough casting which will never chip, and when finished leaves the surface perfectly smooth. Radio-Iron Imposing Surfaces are made extra heavy, averaging forty pounds a square foot. The top side of Radio-Iron Imposing Surfaces is as accurate as the bed of a cylinder press. A three-quarter inch rabbet is cut around the outer edge of the surface to give the galley a firm hold. The rabbet is cut extra deep, which allows for spring in old galleys, and a slight bevel downward assists in handling forms quickly.

The bottom side of Radio-Iron Imposing Surfaces has more than the usual number of ribs, which are made extra heavy. These ribs, and the large solid corners and rests on cross-stays, insure a permanently level surface.

Radio-Iron Imposing Surfaces are practically indestructible and are a permanent investment. The saving of time in composing or pressroom, over ordinary marble stones, more than pays for the surfaces in a short time.

When iron surfaces are ordered to replace marble slabs, or to fit imposing stone frames originally made for marble slabs the new iron surfaces must be made approximately three inches larger each way, (over all measure), to cover the space formerly occupied by the coffin holding the marble slab.

Extra heavy square-leg tables are made for Radio-Iron Imposing Surfaces. Unless otherwise specified these tables are furnished for the standard size surfaces listed herewith.

When special size iron tops are required a practical estimate of the cost may be derived by figuring the entire surface at three cents per square inch. Radio-Iron surfaces weigh, when crated, about forty pounds to the square foot. Printers contemplating substituting iron top imposing surfaces in place of marble tops are solicited to correspond with the American Type Founders Company regarding special sizes, prices, etc. We are in a position to supply you with all necessary information and no doubt will be able to offer some economical suggestion regarding Iron Imposing Surfaces, as well as regarding other matters pertaining to the craft in which you may be interested.

Bottom side of Radio-Iron Imposing Surface, showing extra heavy ribs and large corner rests

70½	For misc. work.	48x72	250	103 68	24 00	26 50

These Tables are smaller than regular Imposing Stone Tables for marble stones.

Radio-Iron Surfaces in any size can be figured on basis of three cents a square inch. Figure weight of Radio-Iron Surface at forty pounds a square foot, crated.

*Varnished and with an antique finish, similar to regular printing-office furniture.

Slauson Cylinder Press Locks

The Slauson Cylinder Press Locks are used for locking chases to the bed of the cylinder presses. These locks are much quicker and safer than wood furniture as they are adjustable and can be made to fit any required size within a very few seconds. They are manufactured from flat drawn steel tubes, which telescope one into another. They are then locked by an ordinary Hempel key. The quoin, which is in the form of a coil (or snail) has an extension of two picas and is absolutely safe. The parts are drop steel forgings. The locks are very quick in action and hold a form solid to the bed, taking out the spring of a chase and preventing the material from working up inside. The locks are used with the press clamps first closed; small or quoin end being always placed against the chase whether outside or inside. They are then pulled out until they fill the space, which they will do within one-eighth of an inch. They are made in five sizes.

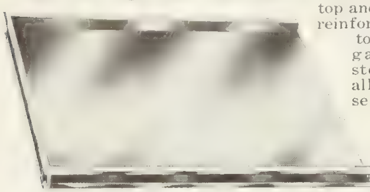
Hercules Steel Rule Cutter

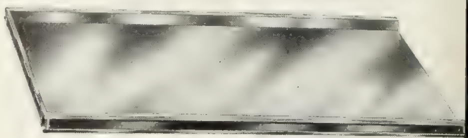
The Hercules Steel Rule Cutter is an extra heavy, powerful machine, designed for use on steel cutting, creasing and scoring rule. It will cut six point tempered steel rule and heavy brass rule and slugs with great ease and leave no burr edges. It is especially adapted for the use of paper box makers, label printers, paper novelty manufacturers and all who cut tempered steel rule or heavy brass rule and slugs. The knives are made of the best grade of steel, hardened by a special process, and seldom require sharpening. They are set into a slot which exactly fits them, so that no adjustment is necessary. They can be taken off and replaced quickly. The front gauge will allow a cut of six and a half inches and the back gauge, which is twenty-five inches in length, is graduated to picas and half-picas. The entire machine is so constructed as to give the highest satisfaction and the longest possible service.

Price, Hercules Steel Rule Cutter, complete $18 00

All-Brass Galleys



All-Brass Job Galley



Double Column All-Brass Galley

Extra heavy rims, bottom of standard thickness and absolutely flat. The American Type Founders Company's All-Brass Galleys are the strongest and most serviceable manufactured. The rim of each galley is made of extra heavy brass with an extra lip at the top and bottom. This not only acts as a reinforcement, but enables the printer to get a more secure grip on the galley as he lifts it from the case or stone. The corners are exceptionally strong and true as they are securely interlocked. This method of interlocking the corners increases the life of the galley to over double that of any other galley. In an All-Brass Galley the corner construction is the most important point to investigate, as it is there that most of the lock-up strain comes. The bottoms are subjected to a special straightening process, which insures the nearest approach to a perfect flatness. The rivets which hold the sides and ends securely to the bottom are of extra hard brass, extend clear through the sides and bottom of the galley, the holes are deeply countersunk and the rivets headed over top and bottom. Our method of interlocking the corners and strongly riveting the sides and bottoms has brought our All-Brass Galley to a point of perfection where it is acknowledged to be the standard of quality and construction.

Printers will be quick to see the advantages of these All-Brass Galleys, and to appreciate the fact the American Type Founders Company carries a complete line of them. These galleys are conscientiously recommended as giving the greatest value for the prices paid and as being of the highest class.

American Patented (One-Piece Rim) All-Brass Galleys

This All-Brass Galley has a rim of only one piece; a continuous strip of heavy flanged brass, formed to perfectly square corners inside, and secured to the bottom by more rivets than are used by any other manufacturer, making it practically indestructible. This patented galley is made by very prominent manufacturers, and is sold under a strict guarantee that it is better and stronger than any other galley. With proper use, it will practically last forever; of rough use, such as galleys invariably get in large offices, it will stand more than any other and still retain its usefulness. Heretofore there has never been a galley which would hold fast at the corners when used around machines or for handling large, heavy pages: but this one-piece rim galley will hold fast all around under the roughest usage. The rim is flanged so that the galley with its load can be readily and safely grasped; no type load will cause yielding, and nothing short of inexcusable abuse will affect the accuracy and durability of this galley while in constant use.

All-Brass Graduated Galleys

This is claimed to be the best "graduated to picas" galley ever made. It is constructed of the best materials. The corners are secured with a steel anchor. The walls are fastened to the bottom with short, stout rivets, placed as closely to the inner face of the wall as possible. The result is the finest possible construction. The galleys are graduated to twelve points on the end and one side—a convenience which will be appreciated. If preferred, plain galleys can be supplied.

Mailing Galleys, Closed Ends (Double Column) 6¼x23½ $3 50

All-Brass Monotype Galley

This Monotype Galley is made entirely of brass. The sides are angle shaped and riveted to the bottom. The rivets have heavy heads and are countersunk into the bottom. Much thought by practical men has been devoted to the construction of this galley, with the result that it is simple, thoroughly practical and will save time and pi in any office where the Monotype is used. The end piece is made removable and the sides are milled out at both ends, so that the end piece can be set at either end, as desired. By this means the operator on the Monotype is able to shift the end of the galley, after it comes from the machine, thus avoiding the necessity of transferring the matter from one galley to another when making up. This will be appreciated by those who know the trouble caused where solid end galleys are used.

Linotype Patent All-Brass Galley

The Linotype Patent All-Brass Galley is made expressly to furnish an efficient and quick method of handling linotype slugs. It is made in two styles: Style A, where slugs are used exclusively, and Style B, where type is used in connection with the slugs. In Style A one side of the galley rim is made considerably lower than the other and the inside of the rims is tapered at the top, which allows of very rapid correction, as the slugs can be tipped endways and lifted out of the galley without interference from the sides. Style B is made with both sides of equal height and finished straight inside, thus effectually keeping the type on its feet. Both styles are locked at the bottom by a foot clamp, which slides over the rims and is tightened by pushing the lever to the left. Pins are set into the ends of the rims to keep the clamp from sliding off and being mislaid. Practically no lock-up is needed. It is strong and exceedingly compact, the complete galley being only one-half inch wider than the measure it is designed to hold. It is made of the best materials with standard bottoms. Give width of column when ordering and send sample slug and mention whether Style A or B is wanted.

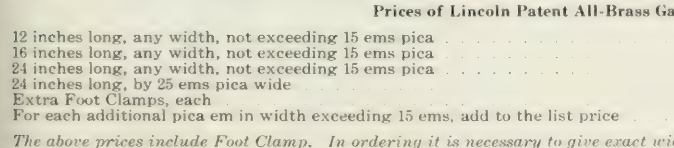
Lincoln Patent All-Brass Galley

The Lincoln Patent All-Brass Galley is generally recognized as the standard among type-holding, self-locking galleys. It has the advantage of insuring a rapid and safe handling of movable type. It has a strongly riveted bottom of standard thickness, and the stationary side and head are strongly riveted together at the corner. The depressible rim is made of extra heavy five-sixteenths inch stock and works on pivots set into the head rim, foot and at regular intervals along the bottom. While the matter is being dumped, this depressible rim is dropped, allowing free access to the galley. When the galley is ready to prove the rim is brought up against the side of the type and fastened by a spring bolt which slips into a corresponding socket in the head rim and is held. The foot clamp is then slipped on over both rims, pushed up against the type and tightened. All this is done very quickly. Corrections are made easily. The galley is only three-quarters of an inch wider than the inside measurement and takes up very little room. The Lincoln All-Brass Galley is made to order only.



Lincoln Patent All-Brass Galley

Prices of Lincoln Patent All-Brass Galleys

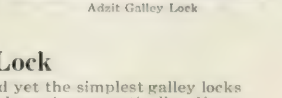
12 inches long, any width, not exceeding 15 ems pica	$2 00
16 inches long, any width, not exceeding 15 ems pica	2 50
24 inches long, any width, not exceeding 15 ems pica	3 00
24 inches long, by 25 ems pica wide	3 50
Extra Foot Clamps, each	50
For each additional pica em in width exceeding 15 ems, add to the list price	05

The above prices include Foot Clamp. In ordering it is necessary to give exact width of type matter for which galleys are required.

Adzit Galley Lock

This is a simple, serviceable device for locking linotype slugs or type in Plate Zinc, Steel Galleys, or galleys of similar construction. No side lock is necessary for linotype slugs; the lock holds the matter firmly on the side of the galley and is released on a simple pressure. It is well finished and made of steel.

Price for Single Column, each	$0 15; per dozen	$1 50
Price for Double Column, each	20; per dozen	2 00



Adzit Galley Lock

Hill & Webb Galley Lock

The Hill & Webb Galley Lock

The Hill & Webb Galley Lock is one of the most efficient and yet the simplest galley locks made. It is constructed of flexible steel, and owing to its unique shape, it automatically adjusts itself to widths varying from three-eighths to two inches, and in every case gives a firm and safe lock-up. Its adaptability enables it to be used with either straight or beveled side sticks.

Price of Hill & Webb Galley Lock, per dozen $2 00

Pressed Brass, Bright Steel and Galvanized Steel Galleys

The Pressed Brass Galley is made from one piece of heavy brass of standard gauge, pressed into shape with an extended rim which gives great rigidity and strength. An absolutely durable and dependable galley at a remarkably low price. It is sold at prices averaging one-third less than the regular all-brass galley. The Bright Steel and Galvanized Steel Galleys are sold at prices averaging one-third less than the regular galleys. They are made of heavy standard gauge steel, just as strong as possible. The galvanized steel galley is not smoothly finished as the steel, as the surface is galvanized to prevent rusting. It also is pressed into shape with extended rims which gives great rigidity and strength. They are durable and dependable galleys at a very low price.

Steel Galleys

Automatic Galley Lock

The above are equipped with Automatic Galley Locks, absolutely positive and reliable, at a price of 10 cents each extra. Galley Locks furnished only when specified in order.

Plate Zinc Galleys

A low price galley of very superior construction is offered in the Plate Zinc Galley. Specially prepared material and the construction of machinery capable of giving the best results have overcome great difficulties. Compressed double-rolled plate zinc is used, the sides are as nearly square and true as possible. The projections on the sides are bent by machinery and soldered to the ends; this gives strength, accuracy and rigidity. The finish is equal to the higher priced galleys, the surface being smooth, even and free from defects. For storage galleys and for all purposes where a large quantity of matter is kept standing, this Plate Zinc Galley will meet all requirements.

Riveted Zinc Galleys

These Zinc Galleys are designed for general use where it is wished to keep forms in galleys while taking proofs and making corrections. Double compressed plate zinc, hard and smooth, free from scales and other defects is used, thus presenting the even surface essential to proof taking. The sides and end are attached to the bottom in a manner insuring an absolutely square, true corner. To make the galleys unusually stiff and rigid, the sides are channel shaped. These afford a substantial hold for the fingers in lifting. The galley is made in all sizes.

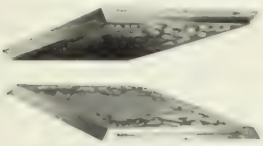
The Orro Embosser

The printer who does job work ought certainly to do embossing. If he does not his presses are not giving him full service and he is missing the profits of one of the easiest and most attractive lines of work ever brought within his reach.

It is a very simple matter to emboss on any job press, large or small, regardless of make, with the aid of the Orro Embosser. No make-ready required and no extra impression. This handy device fastens to the tympan paper and holds the die and counter die (or "force") in a sort of hinge, into which the paper or card passes naturally when the press is fed in the usual way. The device can be put on in a moment and anyone who can operate a press can do expert work with it.

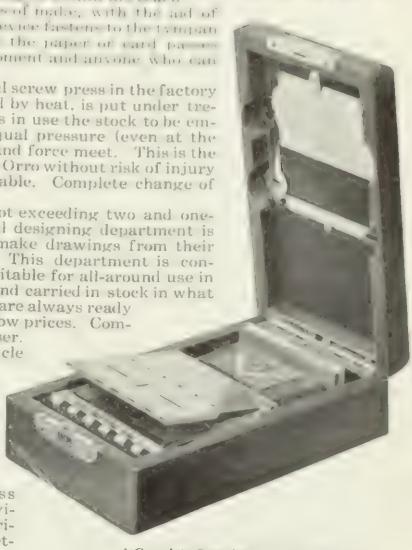
In embossing with the Orro the make-ready or "force" is prepared on a powerful screw press in the factory at the time the die is made. The material of which it is composed, slightly softened by heat, is put under tremendous pressure and forced into every depression of the die. When the "force" is in use the stock to be embossed is pressed into every part of the die with equal pressure (even at the deepest points) before the flat surfaces of the die and force meet. This is the reason why perfect embossing is produced with the Orro without risk of injury to the smallest press made. Dies are interchangeable. Complete change of design can be made in one minute.



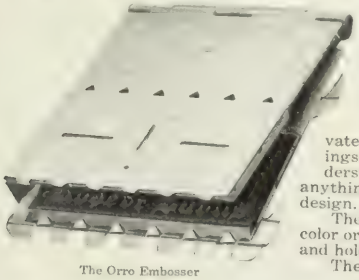
Dies fit perfectly when their arrows point in the same direction

Dies of any design can be made for the Orro, not exceeding two and one-quarter inches long by one inch wide, and a special designing department is maintained to work out customers' ideas and to make drawings from their sketches, or to originate new designs as needed. This department is continually preparing designs of various subjects suitable for all-around use in general job printing, from which dies are made and carried in stock in what is known as the "Library of Orro Dies." These dies are always ready for immediate shipment and are furnished at very low prices. Complete sets of samples of the designs are at the disposal of owners of the Orro Embosser.

The Orro Embosser means more in the printing world than simply another article to be sold at a little profit; it brings in a new element which makes for quality and better work and tends to uplift printing standards.



A Complete Orro Embossing Outfit



The Orro Embosser

It has hundreds of uses, among which are: Covers for booklets, catalogues and price lists, folders, announcements, circulars, notices, letter and note paper, envelopes, bill-heads, blotters, show cards, calendars, photograph-mounts, business cards, bank statements, certificates, invitations, programmes, score cards, private mailing cards, souvenirs, holiday greetings, menu cards, wine lists, ball tickets, orders of dancing, society and club printing, imitation steel die stamping and for embellishing anything made of paper or card with an embossed crest, monogram, trade mark or any sort of design. Anything can be embossed within two inches of the edge.

The embossing may be done in one color or several, with or without printing on top of color or gold. The use of the Orro Embosser means more profit on each job; getting new trade and holding your own; more new trade and greater profits.

The Orro die is two and one-quarter inches long by one inch wide.

Prices of Orro Embossers and Dies

Price, including one die and force, printing plate, template and two iron blocks, the extra block for use in a "standing" form $20 00
Dies, including the "force" or make-ready and a registering printing plate, each 3 50

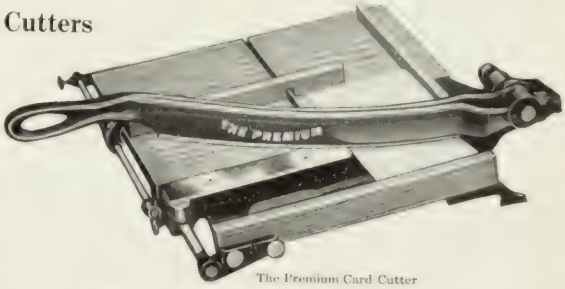
Card Cutters

For the particular printer, who desires to cut his own cards, our line of card cutters will certainly be of interest. It is the best line manufactured. The tables are made of well seasoned kiln dried cherry, stained and varnished. Some of the tables are divided into half-inch squares by lines cut into the wood, and filled with enamel. The joint prevents buckling or dragging of the paper. The rule is adjustable. The blades are made of tempered steel. These Card Cutters are essential in every printing office. Should those listed not fully meet requirements, details of others will be furnished.

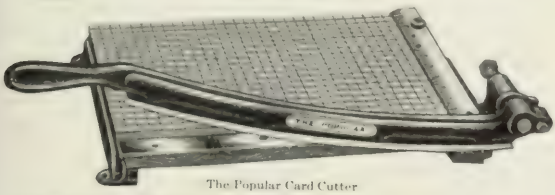


The Premium Card Cutter

THE PREMIUM—For the rapid cutting of cards and sheets the Premium is especially adapted. A sheet of any length can be cut and slipped along without leaving the guide rule.

12-inch blade. Price $10 00

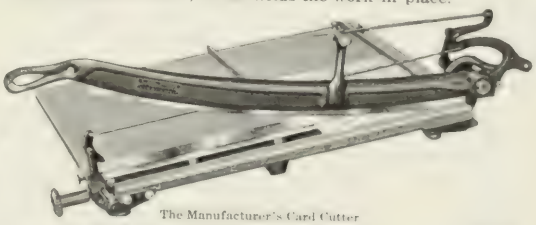
THE POPULAR—The ruled table is a leading feature of the Popular. It provides a cutting guide at any point on the board. This trimmer is large enough for all ordinary studio work.



The Popular Card Cutter

15-inch blade. Price $7 25

THE MANUFACTURER'S—The highest attainment in cutters for heavy work in print shops or studios. Has adjustable gauge and automatic binder, which holds the work in place.



The Manufacturer's Card Cutter

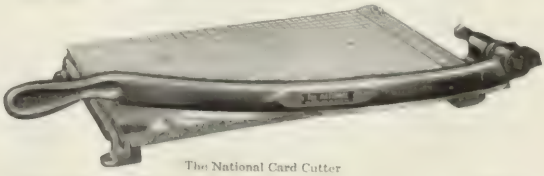
24-inch blade. Price $30 00

THE STUDIO—This is as perfect a little machine as the most improved methods can produce, and is adapted for the use of the amateur and semi-professional photographer.

The Studio Card Cutter

10-inch blade. Price $3 00

THE NATIONAL—This is the latest product in the line of Trimmers and has an eighteen-inch blade thus meeting every requirement of the professional studio. It has adjustable joint and the table is ruled in half-inch squares.



The National Card Cutter

18-inch blade. Price $10 00

Improved Hempel Quoins

The Hempel Quoins have been tested by time and approved by those who use them. The latest improved design fulfils every requirement.

No. 1, small, per dozen	$2 50
No. 2, large, per dozen	3 00
Keys for either size, each	50

The Monarch Quoins

The New Monarch Quoin retains all the desirable features of other quoins with the added advantage of a self-locking device, consisting of a small spring inserted through the thick end. The purpose of this spring is, when the quoin is in position to force the center rib of one part against the teeth in the end of the other half and thus securely lock the quoin and prevent its slipping. It is simple, but effective, ensuring permanent lockup when it is essential.

The Monarch Quoin

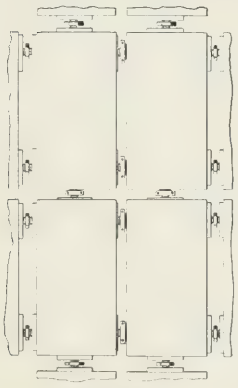
Register Quoins

Where perfect register is desired these Register Quoins are intended for use in forms of mounted plates. The quoins are placed on all four sides of each page, as illustrated, so that any page may be moved independently in any desired direction without interfering with the other pages. The quoins permit of very narrow margins. They are made in two sizes: In No. 1 margins can be regulated from sixteen to twenty-four points. In No. 2 the margin adjustment is from thirty-six to forty-eight points.



Register Quoins in Use.

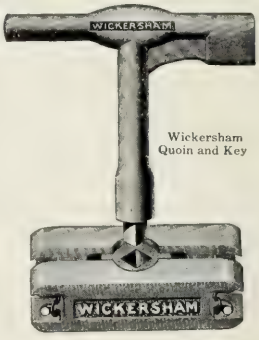
No. 1, per dozen	$2 00
No. 2, per dozen	2 00
Key for either style	20

Wickersham Quoins

The Wickersham Quoin is a very handy device for locking up forms with cramped margins, or where there is not sufficient room for quoins of the Hempel pattern. The Wickersham has a direct spread and will not slip or slide and "squeegee" pages. It is especially excellent for locking up patent blocks or electrotyped pages, whether made up in small or large forms. In printing this catalogue there have been many occasions when it would have been next to impossible to "lock-up" some of the forms, especially those requiring a very close register, without the Wickersham Quoins. The No. 1 is five-eighths inch wide; the No. 2 is three-quarters inch wide; expanding fourteen points.



Wickersham Quoin and Key

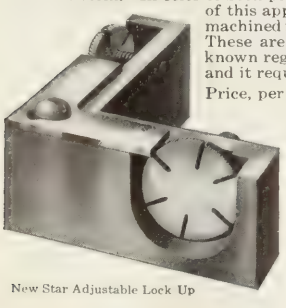
Wickersham Quoins, Nos. 1 or 2, per dozen	$2 50
Wickersham Regular Key, each	50

The Wickersham Key fits all Wickersham Quoins, all Morton Lock-ups and all Stephens Expansion Locks.

New Star Adjustable Lock-Up

This device registers mounted plates with precision and the greatest accuracy in a few minutes without disturbing other matter in the form. In color or book printing, where absolute certainty and exactness of register is of the utmost importance, the use of this appliance assures accuracy without the possibility of failure. It consists of a rigid and accurately machined metallic corner piece, in which are mounted two adjusting screws, one at each side of the angle. These are designed to perform the same function for mounted plates that is accomplished by the well-known register hooks in use with "patent" blocks. Four corners comprise one set, and it requires one set to register a color plate.

Price, per set of four corner hooks, complete $4 00

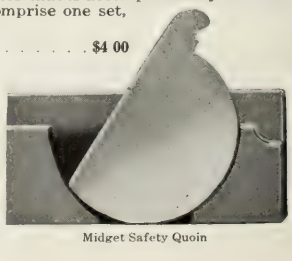


New Star Adjustable Lock Up

Midget Safety Quoins

The Midget Safety Quoin is quickly locked by a tap of the mallet. It occupies no more space in length when locked than when open. It can be used in a space 18 points wide by 120 points long, either inside or outside of form. It is absolutely safe, as when locked it rests against its corresponding flat surface, and the harder the surface it bears against the better.

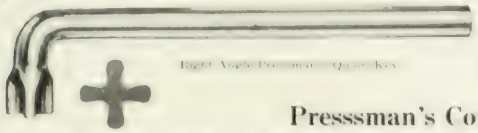
Price, Midget Safety Quoin, per doz., with key	$2 00
Extra Keys for Midget Quoins, each	25



Midget Safety Quoin

Right Angle Pressman's Quoin Key

The Right Angle Pressman's Quoin Keys fit Hempel Quoins of any make. They are made of tool steel, each tooth being cut and not drop forged. They are especially constructed for locking or unlocking a form under the cylinder without taking the chase from the bed of the press. The lever is long, giving ample power and a long reach.



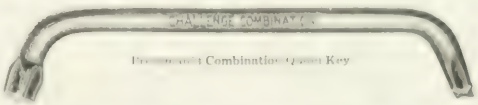
Right Angle Pressman's Quoin Key

Prices of Right Angle Pressman's Quoin Keys

Right Angle Pressman's Quoin Key, plain, No. 1 and No. 2, each, $0 75
Right Angle Pressman's Quoin Key, nickeled, No. 1 and No. 2, each, 90

Presssman's Combination Quoin Key

The Pressman's Combination Quoin Key is made of tool steel, seven and one-half inches long. One end is accurately cut to fit a No. 1 Hempel Quoin and the other is drop forged to fit a No. 2 Quoin. One inch of each end of the key is bent towards the same side of the stem at an angle of 107 degrees, raising the disengaged end one and one-half inches from the form. The pressman is thus enabled to reach under the cylinder and tighten or loosen quoins without in any way endangering the matter in the form, or bruising or soiling his knuckles. The shape of the end gives a firm, convenient hold on the key, while the length gives ample power. This key will be found to be very convenient and useful in the pressroom.

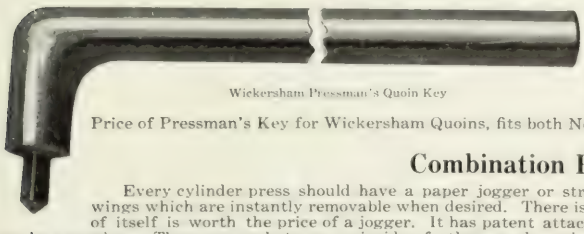


Pressman's Combination Quoin Key

Prices of Pressman's Combination Quoin Key

Pressman's Combination Quoin Key, polished tool steel, each $1 00
Pressman's Combination Quoin Key, nickeled tool steel, each 1 15

Wickersham Pressman's Quoin Key



Wickersham Pressman's Quoin Key

The Wickersham Pressman's Quoin Key, as its name implies, is also intended for use in locking and unlocking forms while on the press. It is decidedly a strong and well-made key and ought to last a long time. It fits both the No. 1 and No. 2 Wickersham Quoins and in offices where these quoins are used this key is just as essential as the Combination or Right Angle Keys for Hempel pattern quoins.

Price of Pressman's Key for Wickersham Quoins, fits both Nos. 1 and 2, plain each $0 60

Combination Paper Jogger

Every cylinder press should have a paper jogger or straightener. The Combination Paper Jogger is made with wings which are instantly removable when desired. There is no projecting rod on the front side to tear clothes. This of itself is worth the price of a jogger. It has patent attachable wings for small joggers, by which letterheads etc., can be evened up. These are made to go on inside of others, and are hung with wire over the main wing, or evening bar. When specified in the order these are included free with small joggers. For sizes larger than twenty-four by thirty-six an extra price of fifty cents is charged.

Prices of Combination Paper Jogger

Hart Combination Jogger, 24x36 . . . $15 00 Hart Combination Jogger, 36x48 . . $18 00 Hart Combination Jogger, larger $20 00

Press Points and Wrench

These points are screwed in as far as the cross bar with the wrench furnished, when they will stand the right height. If a larger hole in the paper is desired, screw the point out. This plan is far superior to the old method of driving a nail or wire into the wood furniture so as to make holes into the sheet.

Press Point and Wrench

Prices of Press Points and Wrenches

Points, per dozen . . . . . $0 75 Wrench $0 75

Adjustable Ball and Socket Drop Hangers

These hangers may be obtained either single or double braced. They all have machine-finished bases and bearings, machine-reamed and faced.

Prices on application

Shafting

All shafting is cold rolled and turned, straightened and polished. The diameters run from fifteen-sixteenths of an inch to one and fifteenth-sixteenths inches, and the weight per foot varies from 2.35 lbs. to 10.03 lbs. It is sold by the pound or by the foot, and detailed prices will be gladly furnished on application.

Iron Pulleys

Iron pulleys are sold either solid or split and the diameters range from six inches to thirty-six inches, with widths of faces from three inches to six inches. We shall be happy to furnish list prices when desired.

Wood-Split Pulleys

Wood-split Pulleys are furnished in diameters ranging from four inches to twenty-eight inches, and with widths of face from three inches to twelve inches. Orders can be filled promptly. Quotations will be gladly furnished for any size pulley on receipt of inquiry giving dimensions required.

Overhead Fixtures

Include two hangers, two collars and set-screws, countershaft, two cone pulleys and driving pulley. In ordering Overhead Fixtures always give diameter and speed of line-shaft. Widths of belts given for the presses are those we recommend. It is possible to run ten by fifteen on a one and one-half inch belt or fourteen by twenty-two on a two inch belt. We strongly recommend fixtures Nos. 19 and 23 for heavy Universal Presses.

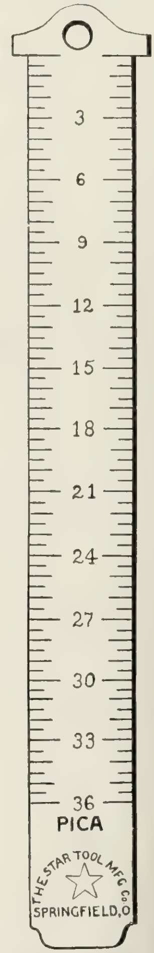
New Star Line Measure



New Star Line Measure Greatly Reduced

This is a most efficient, complete and handy tool, graduated to ems by halves. Its great merit is most convincingly shown by its practical use. A form being composed on the galley is easily measured on both edges, while the line gauge is in the same position for each edge. The right and left hand hook enables the user to compress the measure against the head of the galley with equal pressure as a test for a square, or for column lengths at either edge of the form. It will be found very useful for testing pages in locking up on the stone. These advantages are particularly noticeable in connection with forms set up of machine set matter, either alone or combined with type set matter. On the reverse side is the Pica Rule with standard inches, graduated to sixteenths.

Ink Spade

A very useful little accessory for the pressroom is the ink spade. It is made of steel, heavily nickel plated and may be used for a variety of purposes—cleaning out ink keg, ink can or fountain, mixing ink, or scraping an ink disc or plate. In mixing inks it will not discolor the daintiest tint. One side is cut on a slant and slightly rounded, so the inside of the keg can be scraped without soiling the fingers. Steel handle, with spring steel blade. No better ink spade can be found.

Overlay Knife

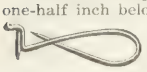
Overlay Knife, in leather case $0 60

Hook Gauge Pin

This Pin is adjustable. The hook point should be inserted one-half inch below the feed line and drawn forward. The gauge point must be dropped at the feed line and lifted to get register.



Price, per dozen $0 25

Single Prong Gauge Pin

This Pin supports itself in an upright position. The point should be inserted at the feed line and the prong run under the tympan to the shoulder or gauge.

Price, per dozen $0 25

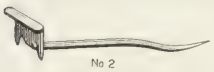
Two Prong Gauge Pin

This Pin has a double point support with span between. Both points should be inserted on the feed line and the prongs run clear in.

Price, per dozen $0 25

Golden Steel Gauge Pins

In order to obtain the greatest advantage in the adjustability of these Gauge Pins the prong should be inserted one-quarter of an inch below the line of feed. The prong, when in the paper with the point brought up through, acts as a sliding bar by which the Gauge Pin is moved backward and forward. Not until the Gauge Pin is in the exact position for feeding are the teeth forced in. All that is needed to stick the prong through is a single sheet of good strong paper. For the general run of job work and in order for the teeth to get a full hold, a tympan, padded with a half dozen hard sheets and a hard cardboard is very suitable.



No 2

No. 6

Price, either size, not assorted, per dozen $0 40

Original Steel Gauge Pin

This Pin was, as its name implies, the first of adjustable gauge pins. Its advantage lies in the gauge head being double thick and its construction such as to provide a broad, flat, even feeding surface. The Gauge corners are also rounded. It is simplicity itself in conception and is a great favorite with many. A good tight tympan should be used, but it is not necessary to stick the prong through more than the top sheet. When the point is run in about half an inch the point should be brought up through by pressing the finger over it and easing the teeth while moving along.

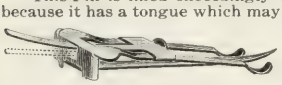
Original Steel Gauge Pin

No. 2

Price, in four sizes, either one size or assorted, per dozen . $0 60

Spring Tongue Gauge Pin

This Pin is liked exceedingly well for all kinds of work because it has a tongue which may be bent up high, so as to receive the sheets more readily in feeding and being elastic will not break under pressure of blocks, leads, or quads in the form. The tongue is also of assistance in preventing sheets or small cards from sticking to the form. In fact the tongue improves the register. The Pin is treated the same as other styles having teeth adjustment, but its securing power is enhanced by the back supports. Any degree of margin, or none at all, is met by setting the Tongue, which may also be run between lines or in blank spaces.



Spring Tongue Gauge Pin

Short Tongue

Price, per set of three, with an extra long tongue with each pin $0 40
Per dozen 1 20

Screw Adjusting Gauge Pin

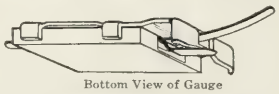
The base of this Gauge Pin is fastened to the tympan by a stout prong and the Gauge is adjustable backward and forward on the base. It may be finely adjusted by simply turning the little knurled nut seen at the rear of the base. Its maximum adjustment is half an inch. Glue or wax may be applied to the open base if necessary. In attaching, the prong should be inserted a quarter of an inch below the feed line and pushed chock home, the Gauge being squared before bringing the prong up through. There are no teeth. Flat tongues are used, which are held in the head of the Gauge.

Price, set of three, including one dozen flat tongues . . . $1 00

Perfect Register Gauge

To obtain perfect register, especially in fine color work, is probably among the most trying and exacting of all the requirements of the printing press. The Perfect Register Gauge is especially designed for making very fine and quick adjustments, not only in starting, but in making changes in its position while running off the job. Some pressmen claim that adjustments can be made without stopping the press. The Gauge is fastened to the tympan by applying glue to the base. To obtain adjustment a slight turn of the disk, which moves the sliding part or gauge-head backward or forward a much slighter degree, is all that is necessary. The full extent of adjustment is one-eighth of an inch. To hold the base on while drying and to prevent sheets slipping under in feeding, a steel point, seen in the bottom view of Gauge, is inserted in the tympan. It is only necessary to secure the top sheet. In removing the Gauge it is best to tear it off from the rear.

Perfect Register Gauge



Bottom View of Gauge

Long Flat Tongue

Price of Gauge, per set of three, including one dozen flat tongues $1 25
Flat tongues, long and short, per packet 25

Brass Gauge Pin

This is a tough Gauge Pin for tough work. May be used on any tympan. Both points are stuck in at the feed line and brought up through.

Sizes made 1, 2, 3, 6.
Price, per dozen . . $0 40

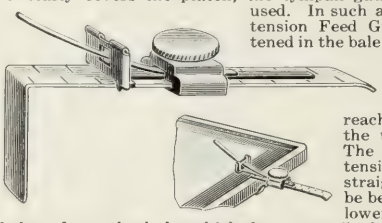
Flexible Side Gauge Pin

This is a Gauge Pin, which enables one to apply both grippers without consideration of the position or safety of the side gauge. It can be used as a bottom gauge as well as a side gauge and is non-smashable. It has teeth and is adjusted in the usual manner. It will be found to possess lasting qualities.

Price, per dozen, with or without lips $0 60

Extension Feed Guides

When it is desired to print on a sheet so large that it nearly covers the platen, the tympan gauges cannot be used. In such a case the Extension Feed Guides are fastened in the bale and by the use of the long and short guides, any point is reached between the two positions. The leg of the extension is furnished straight and should be bent around the lower edge of the bale to form a hook, by which they are easily drawn down and secured with the bale.



Price, including pair of short guides and long tongue, per pair $1 00

Eccentric Stud Gauge

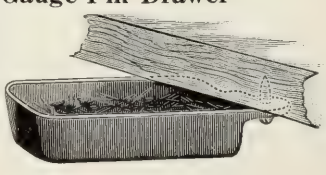
This Gauge is turned from a solid bar of metal and is provided with a fixed lip instead of an adjustable tongue. The face of the gauge is round instead of flat. It is made fast to the tympan by a knurled nut, which draws a circular plate against the under side of the tympan and binds the whole together. It may be attached from underneath or by inserting the circular plate from above. In thick tympans a slot should be made, so that the screw may move freely in it.

Eccentric Stud Gauge

Price, per set of three $0 75

Iron Gauge Pin Drawer

Made of iron, screws on under the feed board of press table. Useful for gauge pins when not in use.
Size 2½x3½x¾ in.
Price each, including screw $0 25
Postage . . . 08



Solid Brass Gauge

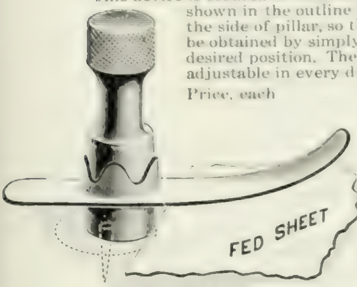
This is a job press guide or gauge, made of solid brass. It is twelve point, and when glued to tympan acts as an effective guide.

Price, per dozen $0 50

Cylinder Side Guide

This device is secured to the feed board by the sharp point shown in the outline in cut, which is placed at the side of pillar, so that hair adjustments may be obtained by simply turning the pillar to the desired position. The bendable brass tongue is adjustable in every direction.

Price, each $0 50



Gauge Pins

Gauge Pins are probably more used today than ever before. They are really a necessity in most printing offices. They are inexpensive and save considerable time in make-ready. In order to meet the demands of our customers we keep a large assortment of the very best lines made.

Double Grip Gauge

A new method of attachment was developed in devising this Gauge. In fastening it there is no necessity to use teeth, prongs, glue or paste. Neither is it necessary [illegible] of or slit the tympan transversely. All that is required is to cut a slit through the top sheet straight from the feed line one inch in length. Into this slit the under plate is inserted sidewise up to the screw studs, and there fastened by the two nuts. Sufficient hold can be produced with the fingers for ordinary stock as it is secured at two points along the slit, but for cardboard the key should be used. One-quarter inch adjustment is obtained with the inch slit. If more is required it can be had by cutting the slit longer. A very powerful hold is obtained by the use of a manila top sheet. It does not injure packing, the tympan may be turned back or its use repeated. Sheets cannot be fed under the gauge-head. This is a very handy and useful device and is a gauge, not a pin.

Key for Gauge

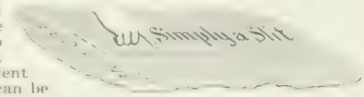


Diagram showing slit

Price, set of three, including six extra tongues, per set . $1 25

Megill Automatic Register Gauge

The highest class printing, whether in colors or in black, demands uniformity and this cannot be obtained without accurate register. The Automatic Register Gauge will not only produce absolutely perfect register but will increase the output and save stock. It will allow the press to be run at a higher rate of speed without the usual spoilage and use of the throw-off. The Automatic is instantly applicable to all sizes and makes of platen presses. No changes are required. On reference to the illustration it will be seen that the Gauge is complete in itself and, though operated by the gripper, has no connection with it and is free to be placed anywhere. The speed arm touches the gripper near the bottom and, having a lateral motion across it, always works easily and is adapted to any inclination of gripper or platen. All wearing parts are of hardened steel and the device is constructed on the interchangeable system. It takes less than a minute to attach, and the method of attachment is simple and reliable. The finest adjustment can be obtained and no parts are employed which are liable to disarrange during the run. The forward feet prevent the sheets from feeding under the setter-head. A tongue is unnecessary as the lip prevents the sheets from slipping up over the setter-head in feeding. The gripper is set so as to come down between the setter-head and toggle-joint when flat. All parts depress to twelve points. The speed arm is needed only when running. It is applied at the notch and runs easily to position. The pressure of the gripper will not displace it. The illustrations show a twelve point setter-head.

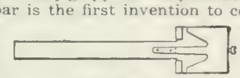
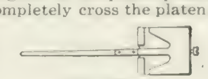
Price, delivered $4 80

Gripper Cross-Bar and Gripper Fingers

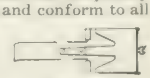
These devices will do the work which has defied the ordinary grippers. They are designed for the platen press and can be quickly applied and adjusted, holding immovably. The Cross-bar is the first invention to completely cross the platen and conform to all spaces between the grippers without extending outside. It consists of two three-eighths inch Fingers and intermediate sections of different lengths which slide with spring tension upon the Fingers. The Fingers are made in various shapes and used singly or collectively. They lie between the type matter without smashing leads or quads. The Down Fingers extend vertically over the sheet and may be adjusted to do effective work anywhere between the grippers. The Marginal turns down at the end and nips the sheet. The Inside Marginal extends laterally in both directions over the end of the sheet parallel to the gripper and admits a narrow gauge-head between. Sheets are lapped along the margin in either direction whether wide or narrow. Spaces between matter are also entered from either direction. In printing small forms the left hand gripper may be equipped and the right hand gripper set to one side out of the feeder's way. The Gripper Fingers are made in five-eighths, one inch and one and one-quarter inch sizes, the openings for grippers the same in width or narrower. There are frequently occasions, after complicated type forms are put on the press, when the pressman is obliged to resort to make-shift methods in order to obtain the fine results he desires. Sometimes the forms may slur, or the stock will permit of very small margin. Often the stock curls and wrinkles, or will not lie flat. Frequently the sheets adhere to the form, or a variety of other difficulties may arise, all tending to obviate good work and causing loss of time. The prices of the Gripper Cross Bar and Gripper Fingers make it possible for a pressroom to own a complete complement of this useful device.



3/8-inch Finger

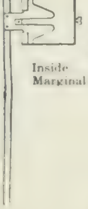


1/8-inch Finger



Marginal

Down Finger for 3/8-in. Finger

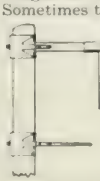


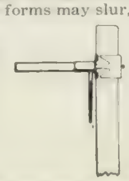
Inside Marginal

Down Finger for Cross-Bar

Consists of two 3/8-inch Fingers and Intermediate Sections. Conforms to all dimensions between Grippers

5/8-inch Gripper Finger, size one inch, reduced one half





Cut at left shows right-hand gripper equipped with 3/8 Finger carrying a Down Finger. Also a 1/8 Finger.

Cut at right shows left-hand gripper with 3/8 Finger carrying Down Finger set to very narrow margin, the side gauge to go below it.

Tweezers

No. 11 A Tweezer

This is a good and cheap Tweezer. It is made of polished steel, nickel plated; 3½ inches long.

No. 11 A, nickel plated. Price $0 25

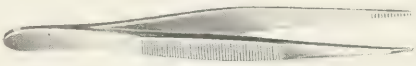
The No. 5 is the best Tweezer procurable at the price; has file point, steel, nickle plated; 4 inches long. Price $0 50

No. 5 Tweezer

No. 7 Tweezer

The Nos. 7 and 8 are the best Tweezers made; tempered steel, nickel plated, with file cut points and backs. No. 7, 4 inches long. Price $0 75

This is the No. 8 Tweezer, 4¾ inches long.



No. 8 Tweezer

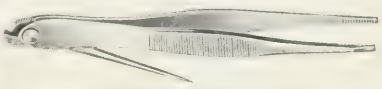
Price No. 8 Tweezer $0 85

Improved Locking Tweezer

The Improved Locking Tweezer cannot get out of order easily. Locks and unlocks automatically by holding the points up or down. Can be carried in the pocket with comfort and safety.

Nickel plated. Price $0 90

No. 3 Combination Bodkin and Tweezer. When not in use the bodkin folds into the tweezer. Pressure on the file cut brings the bodkin out readily and when extended it locks securely.



No. 3 Combination Bodkin and Tweezer

Nickel plated. Price $1 00

Bodkins

Steel Needle Bodkin

Steel Needle Bodkin with wooden handle. Price $0 10

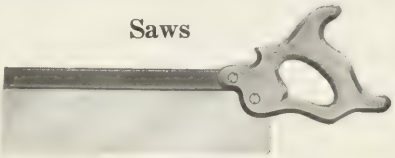
Marble Ink Slabs

These Marble Ink Slabs are made from the best grade of Vermont marble, especially finished for the purpose.

Marble Ink Slabs, 8x12 inches, each $1 25
Marble Ink Slabs, 12x18 inches, each 2 00
Marble Ink Slabs, 18x24 inches, each 3 75

Saws

The Back Saw is one of the most essential articles for the composing room. It cuts wood or soft metal with the greatest of ease. Price $1 25



Back Saw

Miter Boxes

Miter Box

We have a Miter Box so strongly built that it cannot be broken. It is made of lumber that is built up of various layers with the grain crossed.

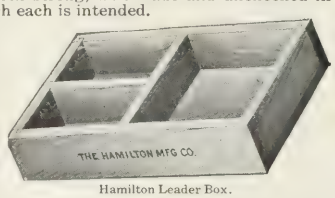
Unbreakable Miter Box, 13½ ems wide, weight two pounds. Price $0 50
Unbreakable Miter Box, 3 inches wide, weight three and one-quarter pounds. Price 60

Other sizes of Laminated Miter Boxes can be made to order. Prices furnished on application.

Leader Boxes

There are two types of practical Leader Boxes, the Hamilton and the May, both strong, well made and unexcelled in the purpose for which each is intended.

For the job man the Hamilton Box is probably the best, as it can be used anywhere about the office, carried to the job bank or used on a stone. For the type compositor the May Box is doubtless the best, as it does not cover the type boxes when in use and is placed in a certain position and kept there.



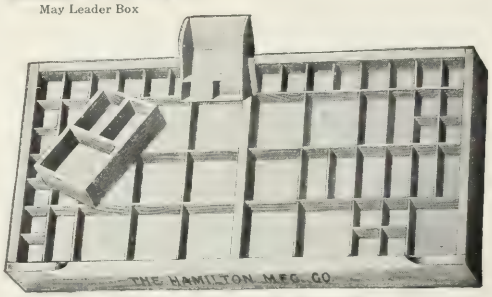
Hamilton Leader Box.

May Leader Box

Prices

Hamilton Leader Box, size 5x8x1¾ inches, weight six ounces.
Price, per dozen $2 50
Each 25

May's Patent Leader Box, size 4½x6½x1½ inches, weight four ounces.
List price, per dozen . . $5 00
Each 50



This illustration shows how the May Leader Box and the Hamilton Leader Box may be placed on a Case

Case Pulls

The No. 1 Case Pull is attached to all steel run and wood run cabinets and is a most convenient pull for all type cases.

No. 1 Case Pull

Price, with screws for attaching to case fronts, each . . $0 05
Price, with screws, in bulk, each 04

No. 2 Case Pull

For attachment to shallow cases and narrow drawers.

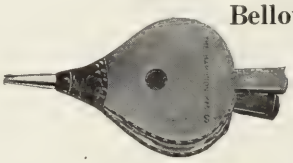
Price, with screws, each $0 04
Price, with screws, in bulk, each 03

No. 3 Case Pull

This is a pull and label holder combined.

Price, with screws, each $0 05
Price, with screws, in bulk, each 04

Bellows



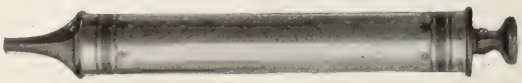
Bellows

These Bellows are made exactly as illustrated and are correctly shaped; they are very strongly made of best selected materials. In the construction of these bellows, a reed has been placed inside which greatly assists inflation.

Small size Bellows, 8 inches, weight eighteen ounces.
List Price $1 00
Large size Bellows, 10 inches, weight, twenty-three ounces.
List price 1 25

Cylinder Bellows

The operation of "blowing out" dusty cases is far better controlled by the use of the Cylinder Bellows than with the ordinary old fashioned bellows. The former is more powerful.



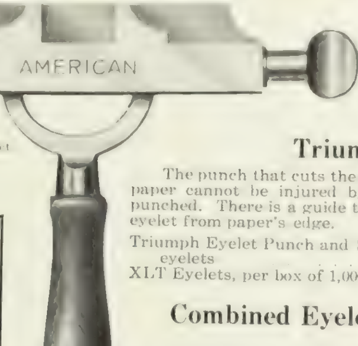
Cylinder Bellows

Small Cylinder Bellows. Price $1 25
Large Cylinder Bellows. Price 1 50

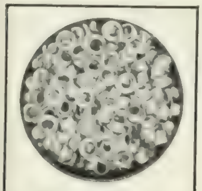
American Lettering Pallet

This Lettering Pallet is made of solid brass, substantially constructed, and handsomely finished. It is admitted to be one of the best pallets manufactured. It has capacity for a line four and one-half inches long. It is readily adjusted by two thumb screws, which center the line with one operation from either end. It is an indispensable tool for every bookbinder. The American Type Founders Company makes the best and largest assortment of Brass Type, reproducing in brass many of its type designs that are most suitable for the purpose. A complete, modern and up-to-date specimen book of Brass Types, Ornaments and Borders will be furnished on application.

Price, American Lettering Pallet $6 00



American Lettering Pallet

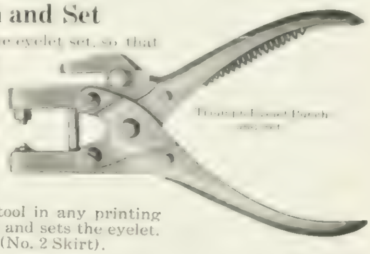


Eyelets for Punch

Triumph Eyelet Punch and Set

The punch that cuts the paper is separate from the eyelet set, so that paper cannot be injured by the latter while being punched. There is a guide to regulate the distance of eyelet from paper's edge.

Triumph Eyelet Punch and Set, including 1,000 eyelets	$2 25
XLT Eyelets, per box of 1,000	40



Triumph Eyelet Punch and Set

Combined Eyelet Punch and Set

Combined Eyelet Punch and Set

This is a very useful tool in any printing office. It punches the hole and sets the eyelet. Takes only one size eyelet (No. 2 Skirt).

Price complete	$1 50
Eyelets, per box of 1,000	50
Eyelets, per box of 500	25

The sizes of the punches and the dies correspond with the eyelets made. Order by number.

American Job Press Brake

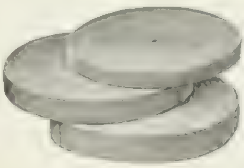
Our Job Press Brake is a simple, durable and effective brake for Gordon and other platen presses. It is made entirely of cast iron in a workmanlike manner. Anyone can attach it in a very few minutes. One of the most important features of this Job Press Brake is that a belt may also be used on the fly wheel of the press without interfering in any way. The Job Press Brake stops the press instantly, thus often avoiding accidents and expensive repairs. It is a safeguard that should be placed on every job printing press. In addition to the list of regular sizes and prices given below, we can furnish special brakes at a slight advance in price for any press, if the following dimensions are given: the diameter of the fly wheel; the distance from the fly wheel to the floor and the distance from the center of the fly wheel to the front of machine.

Price of American Job Press Brake (in regular sizes) $5 00

American Job Press Brake

Tape in Rolls

A good quality of tape is necessary in the press room and bindery. Cheap tape is dear at any price. There is scarcely anything more annoying than the breaking of a tape on the press, or on any other machine. This invariably happens when one is in a hurry. We have tested many makes of tapes and have concluded that the quality we offer is the best that has been made up to this date.



Tape in Rolls

Metallic Tape Couplers

This is a device for connecting the ends of tape on presses and folders, so that there will be no wear on the joined parts. This method is more durable than any other for securing the ends of tape. The Couplers prevent the tape from running crooked and throwing paper out of register. They can be put on in a few seconds by means of parallel pliers made for this purpose. The Metallic Couplers are not made larger than one and one-eighth inches. If one and one-quarter-inch size is wanted, use two of the five-eighth-inch Couplers.

Metallic Tape Couplers

Steel Roller Supporters

Steel Roller Supporters

For job presses these are among the best supporters yet devised. They only occupy one-quarter of an inch of the inside space of a chase: they ease the pressure of the rollers on the form, prevent over inking and save rollers from cutting, as they are three-quarters of an inch wide on top. Being nickel plated they will not affect the daintiest ink.

List Prices and Dimensions of Steel Roller Supporters

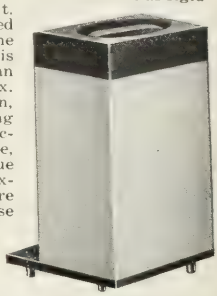
For 14 1/2x22 Chase	90

The Superior Steel Tableting Press

Here is an improvement in the lasting qualities of a Tableting Press. While the old method of building this device mainly of wood was fairly satisfactory, a better way has been adopted. The Superior is constructed entirely of steel and iron and is as rigid and strong as it is really possible for human hands to make it. There will be no more warping or cracking when this improved line of Steel Tableting Presses comes into general use. The Superior Press has no clamps or screws to be operated and is very rapid and effective in operation. This apparatus has an iron brick and base plate, which forms the bottom of the box. The sheets are placed in the box, as shown in the illustration, and the iron brick placed on top of the pile. Then by taking the press by the handle and leg and placing it in a perpendicular position, and withdrawing it from under the base plate, the pile is left standing on the base plate all ready for the glue brush, as depicted in the cut. This press is a trifle more expensive than if made of wood, but will be found much more economical in the long run. Every printer needs one of these Steel Tableting Presses for his office equipment.

Superior Steel Tableting Press



Sheets Ready for Gluing

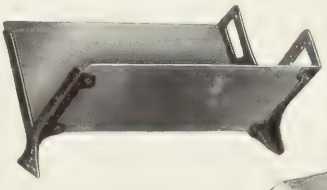
Extra Cast Iron Bricks, weight about twenty-five pounds, each	2 75
Extra Base Plates, each	75

The Perfection Steel Tableting Press

Like the Superior, the Perfection Steel Tableting Press is made of steel and iron, with the same careful workmanship as is used in the manufacture of the higher priced apparatus. While the price is somewhat higher than for wooden presses, the lasting qualities are so much greater that it is bound to prove cheaper in the long run. The Perfection Steel Tableting Press is intended to straighten up and hold the sheets of paper while being glued. It is simple and convenient and will be found to be one of the best and handiest articles yet devised for the purpose. It will handle any number of sheets up to three thousand with equal ease. Is made sloping so that the paper will rest alone while being adjusted. The clamp is separate from the box and is quickly arranged to take various thicknesses. Any desired pressure may be obtained by turning the screw crank.

The advisability of equipping with the Perfection Steel Tableting Press will be apparent to the up-to-date printer. We supply them on short notice.



Perfection Steel Tableting Press

This catalogue contains a great number of articles that have recently undergone improvement in construction and these Tableting Presses are among them.

Prices of Perfection Steel Tableting Press and Clamps

Perfection Steel Tableting Press, sheet steel holder, complete with clamp and five boards	$5 00
Extra Clamp, with Five Boards	2 50
Extra Clamp, only	1 40

Cott's Tablet Holder and Clamp

Cott's Tablet Holder and Clamp is similar in construction to other tableting presses, except that it is made of wood and is more economical in price. It will hold any number of sheets up to three thousand and any size from two and one-half by two and one-half inches to eighteen and one-half by fourteen inches. The clamp is adjustable to the various thicknesses and any desired pressure can be obtained quickly and effectively.

List Prices of Cott's Tablet Holder and Clamp

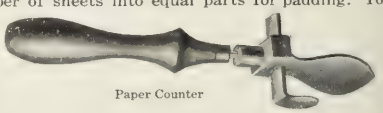
Paper Counter

This Pad or Paper Counter is a device adjustable for dividing any number of sheets into equal parts for padding. To use, you count out the number sheets wanted by hand on top of which place the plate.



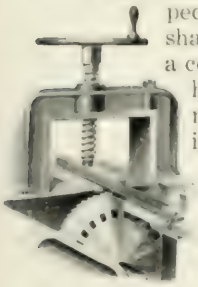
Paper Counter

Then draw the adjustable gauge up firmly against the paper, screwing the handle in to hold the stab in place. To operate, place plate on top of lot to be counted and push stab into paper, bearing down at same time. The gauge is nickel plated and adjustable up to one and five-eighths inches.

Price $0 75

ELECTRIC-WELDED STEEL CHASES

Every bar of steel used in the manufacture of these Electric-Welded Steel Chases is made up from a special grade of open hearth steel. This special mixture was compounded to meet the peculiar conditions of electro-welding, which always require that the impurities shall be very low, so that the steel shall weld well and also prevent what is known as a congregation of impurities rendering the steel brittle and liable to breakage, which happens when the impurities collect together. In order to bring about the right mixture, the proper proportions of carbon and manganese must be effected. Carbon imparts the property of brittleness, therefore only a small percentage of carbon may be used. It is also necessary to have manganese in the proper quantity for the purpose of making it dense, close-grained, tough and strong. Sulphur and phosphorus are great enemies of steel and the best steel contains only very slight traces of these ingredients. Our steel contains the proper proportions of carbon and manganese and is as free from sulphur, phosphorus and other impurities as it is possible to make it. After the steel is made it is first hot drawn through dies of approximately the size, then cold drawn to the correct size. This very process of drawing is a guarantee of strength of each and every bar used by us as it takes a pull of some 40,000 pounds to draw each bar through the dies. Any bar which breaks in this drawing process is thrown aside as defective. Therefore the secret of the Electric-Welded Steel Chase lies, first, in the grade of steel used, and second, in the method of welding—in electric-welding the heat is first generated at the center of the bars, and thus the weld is made from the center outward. In electric-welding, too, exactly the right amount of heat may be applied to bring the metal to just the degree of fusibility which gives the best results. The material is not weakened by burning, nor is its temper drawn at any point except where the weld is made; and yet the heat is sufficient to cause the molecules of steel to intermingle just as they would were the metal melted and cast in a mold; hence it is that the four bars originally used for making an Electric-Welded Chase really become one solid, perfect piece of steel, without flaw or blemish of any sort to indicate that a weld has ever been made. The steel used in our chases has a tensile strength almost double that of the material used in the past, as has been demonstrated by tests made in the testing laboratory of one of the largest steel plants in this country. The tests by no means ended here; mere strength lacks much of being the only test of a good chase. Deflective tests showed that, on two chases of the same size, when each was sprung a quarter of an inch the Electric-Welded Chase returned to its original shape on the removal of the pressure, while the one made from cast-steel remained three-sixty-fourths of an inch permanently out of true. A series of these tests was made, every one of which showed the Electric-Welded Chases to have more than double the resisting power of any others. The tests were all made with a view of determining which of the many samples submitted was best for chase-making. Because of its bright, glossy finish we have named the new material Silver-Gloss Steel. The bars of steel from which the Electric-Welded Steel Chases are made are drawn expressly for us. Being cold-drawn every bar is of the finest texture, and is perfectly true in all dimensions. The bars come from the steel mill in all the special sizes and shapes used in chases. The first process of manufacture is the sawing of the bars to lengths suitable for the work in hand, for which purpose a circular saw which cuts through the hard steel with astonishing ease and speed is used. When they leave the saw the pieces are passed to the man in charge of the welding. He places them in the electric-welder, where they are held tightly against each other by huge, vise-like jaws, which gradually, at the will of the operator, close up as the heat increases, the movement being just sufficient to insure a perfect unblemished joint. This weld being made, the now solid piece is rigidly held in a right angle vise which prevents warping out of shape or springing while cooling. But for small ridges of excess metal at the point where the weld is made, the welding would finish the chase; as it is, all that remains to be done is to cut away the ridge, which work is quickly done by the milling and grinding machines which leave the bars from which the chase is made as smooth and perfect as they were before the welding. The excess of metal formed in the welding process in each inside corner is removed on the punch press (see illustration). If the chase is to be fitted with bars, the special automatic dovetailing machine is brought into play. Printers throughout the country have recognized the value of improved chases for their jobbers and thousands of them have been sold.



Cuts through the hard steel with astonishing ease

The above list of sizes and prices applies also to Brazed Steel Chases—see page 1221.

To Estimate Price of a Book Chase, size not listed

Find price of same size Poster or Skeleton chase and add **$4.00** if solid bars only are wanted. Add **$5.00** if one bar only is to be shifted and **$6.00** if both bars are to be shifted. Unless otherwise ordered, Book chases will be furnished with one bar only shifting. Minimum price of Book chase with both bars shifting, **$10.50**. For bar only, add **$1.00** to list; for pair of dovetails add **$1.00** to list; for both add **$2.00** to list. For extra stock charge same as in Poster chases. See Poster list for figuring measurements ending in fractions.

The above list of sizes and prices applies also to Brazed Steel Chases—see page 1221.

To Estimate Price of Pair of Folios, size not listed

Add length and breadth of pair over all in inches and multiply this by nineteen cents per inch. In figuring extra-stock charges, consider each chase separately; charges will be same as for Poster chases. Minimum price of pair folios **$9.00**. See Poster list for figuring measurements ending in fractions.

*These sizes carried in stock and will be furnished unless otherwise specified.

The above list of sizes and prices applies also to Brazed Steel Chases—see page 1221.

To Estimate Price of a Poster Chase, size not listed

Add length and breadth in inches together to obtain measure. Multiply this measure by eleven cents. For price of News or Poster with bar add **$2.00** to list of Poster without bar. Minimum price of Poster chase **$4.50**. For extra bar only, add **$1.00**. For extra pair dovetails only, add **$1.00**. Measurements ending in fractions to be figured as next full figure. For example: 17x20¾ in.=37¾ in., figure 38 in.; 33½x45¾=79¼ in., figure 80 in.; 29⅜x40½ in.=69⅞ in., figure 70 in.

***Charges for Extra Stock**

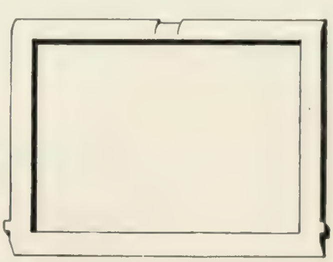
For each ¼ inch wider than regular, add for measurement, length, and breadth, 40 inches and smaller	**$0 20**
For each ¼ inch wider than regular, add for measurement, length, and breadth, 41 to 60 inches, inclusive	**30**
For each ¼ inch wider than regular, add for measurement, length, and breadth, 61 to 80 inches, inclusive	**45**
For each ¼ inch wider than regular, add for measurement, length, and breadth, 81 to 100 inches, inclusive	**60**
For each ¼ inch wider than regular, add for measurement, length, and breadth, 101 inches and larger	**75**
For ¾ inch thick stock add for measurement, length, and breadth, 40 inches and smaller	**60**
For ¾ inch thick stock add for measurement, length, and breadth, 41 to 60 inches inclusive	**1 00**
For ¾ inch thick stock add for measurement, length, and breadth, 61 to 80 inches inclusive	**1 40**
For ¾ inch thick stock add for measurement, length, and breadth, 81 to 100 inches inclusive	**1 80**
For ¾ inch thick stock add for measurement, length, and breadth, 101 and larger	**2 20**

For extra width and ¾ inch thick stock, add both of the above charges.

*Charges for extra stock are based on ¼ inch increase in width over size of stock regularly used for a chase of similar total length and breadth. If a chase is ordered with side bars 1/16 inch, ⅛ inch or 3/16 inch wider than regular, no extra charge will be made. If extra stock is ordered for three side bars only take three-quarters of the extra charge for that size chase; for two bars one-half, and if only for one bar one quarter.

NOTE.—There will be no extra charge for special size cross bars.

Steel Electric-Welded Job Chases



Owing to the fact that we find no two presses of any platen bed make other than the Chandler & Price which have the same length of bed, or the clamps in the same position, we are compelled to make chases for these presses with lugs long enough that they may be fitted to the press by purchaser, and also make the chase enough wider to cut out, as shown by diagram to fit clamp. To insure a perfect fit on bed of press, we recommend customers to send complete chase with order after ascertaining that sample chase fits correctly.

7x11	**$5 00**	12 x18	**$6 50**

The above list of sizes and prices applies also to Brazed Steel Chases—see page 1221

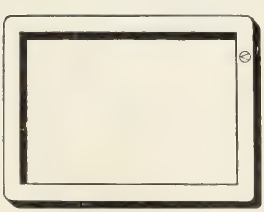
To Estimate Price of a Set of Quadruples, size not listed

Add length and breadth in inches of set over all and multiply by twenty-eight cents per inch. In figuring extra-stock charges consider each chase separately; charges will be same as for Poster chases. Minimum price for set of Quadruples, **$18.00.** See poster list for figuring measurements ending in fractions.

*These sizes carried in stock, and will be furnished unless otherwise specified.

Steel Electric-Welded Electrotype Chases

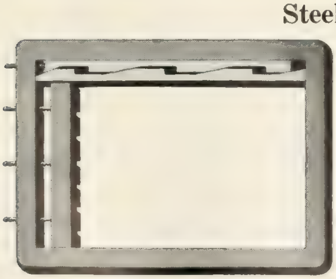


Size Number	Outside Measurement	Inside Measurement	Size of Material: Width, Side Bars	Width, End Bars	Thickness of Bars	Price of Chase
*1	13x17 inches	10x14 inches	1½ inches	1½ inches	⅝ inch	$4 90
*2	15x21 inches	12x18 inches	1½ inches	1½ inches	⅝ inch	4 90

The above list of sizes and prices applies also to Brazed Steel Chases—see page 1221

*Compute cost of Electrotype chases same as Poster, adding for extra stock. Minimum price **$4.90.** See Poster list for figuring measurements ending in fractions.

Steel Electric-Welded Stereotype Chases



Steel Electric-Welded Stereotype Chase

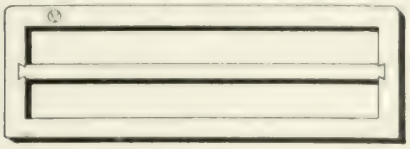
These Stereotype chases are made in the most accurate manner, exactly type high, perfectly square and true. The side lock-up screw is attached to the side stick with a collar in such a manner so as to enable the operator to lock up and unlock the form with the wrench, moving the side stick backward and forward instantly, thus saving much time and avoiding the use of shooting stick and mallet, and consequent injury to the side stick.

6 Column	**$36 00**	9 Column	**$42 00**
7 Column	**38 00**	Blank Column	**3 50**
8 Column	**40 00**	Lock-up Wrenches for Stereotype Chases	**2 00**

*NOTE—One wrench is furnished gratis with each set of four stereotype chases. If less than four stereotype chases are ordered wrenches are not supplied except at regular price. Chase without side or foot sticks or screws, one-half of list price of complete chase quoted above.

Side Sticks, per pair	**$12 00**	Foot Sticks, each	**$3 50**
Side Sticks, one only	**7 50**	Foot Stick Screws, each	**40**
Side Stick Screws, each	**80**		

Steel Electric-Welded Heading Chases



SIZE OF MACHINE

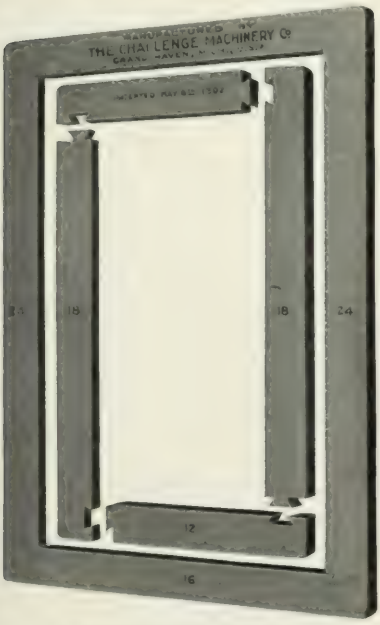
The above list of sizes and prices applies also to Brazed Steel Chases—see below

Estimate Price of Heading Chase, size not listed, same as Poster Chase

Minimum price of Heading chase without bar, $4.50. For bar and pair of dovetails add $2.00. Unless otherwise ordered, cross bar Heading chases will be furnished. Figure extra stock same as in Poster chases. See Poster List for figuring measurements ending in fractions.

McGreal Combination Printer's Chase

Every printer knows the advantage of having an adequate chase equipment in order to save time and money. In a plant equipped with McGreal Chases there is always on hand chases of the proper size to fit the form. A perfect lock-up is assured in the shortest time, and "springy" forms are avoided.



McGreal Combination Printer's Chase

The McGreal Chase is made from bars of high grade cold drawn steel, outside bars one and one-half inches wide by five-eighths of an inch thick; shifting cross bars three-quarters of an inch wide by five-eighths thick. Each piece is perfectly interchangeable with every other piece. Any two pairs and shifting cross bars necessary to form a chase can be put together and taken apart in a few seconds. They are perfectly true, and resist one-third more pressure than the old wrought iron chase. The smallest size is four inches in length, and each successive size is two inches longer up to twenty-eight inches.

Prices of McGreal Combination Printer's Chase

Plain Bars, Each		Plain Bars, Each	
4-inch lengths	$1 60	35-inch lengths	$3 80
6-inch lengths	1 70	$35\frac{3}{4}$-inch lengths	3 80
8-inch lengths	1 80	$37\frac{3}{4}$-inch lengths	3 90
10-inch lengths	1 90	$38\frac{3}{4}$-inch lengths	4 00
12-inch lengths	2 10	$39\frac{3}{4}$-inch lengths	4 00
14-inch lengths	2 20	42-inch lengths	4 30
16-inch lengths	2 30	$42\frac{3}{4}$-inch lengths	4 45

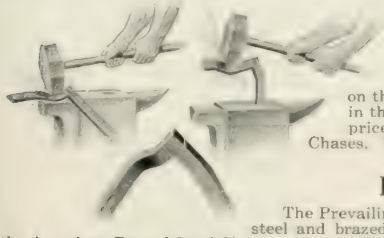
American Brazed Steel Chases

American Brazed Steel Chases are made from high grade cold drawn steel, milled to a perfectly square and even finish and beveled so as to insure perfect uniformity. They are constructed with an indestructible overlapped countersunk corner joint which cannot be broken by any ordinary usage. The illustration shows the Sledge Hammer Test. The cut on the left shows the brazed corner when subjected to a blow of a twenty pound sledge, chase lying flat on anvil. The right hand cut shows test made with section of chase stuck upright in anvil and struck so as to break the corner if possible. The lower cut shows actual condition of the All Steel Chase after the test. American Brazed Steel Chases are uniform in size, and it has been demonstrated that they are undoubtedly the strongest chases on the market. Thousands of them are in daily use in many of the best printing offices in the country, and the demand for them is constantly increasing. The list of sizes and prices quoted on Steel Electric Welded Chases also apply to American Brazed Steel Chases. Write for circular and net selling prices.



Prevailing Beveled Edge Bright Steel Chases

The Prevailing Beveled Edge Bright Steel Chases for job presses are also made of cold drawn steel and brazed in the same manner as the American Brazed Steel Chases, and in addition possess the advantage of having indestructible overlapped countersunk corners.

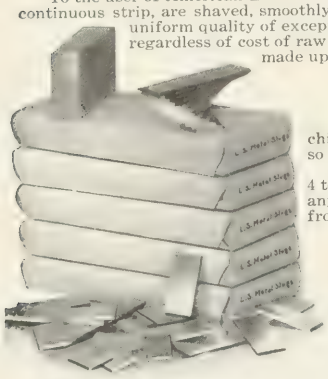
Metal Leads and Slugs

To the user of American Leads and Slugs it is not necessary to say a word about quality. These leads and slugs are cast in a continuous strip, are shaved, smoothly finished by rollers and come out absolutely accurate to point bodies. They are cast from a uniform quality of exceptionally durable metal, the formula of which is kept at a certain standard from year to year regardless of cost of raw material. This lead alloy is the result of an experiment extending over several years, and is made up of new metals, no inferior scrap or old metal being used.



Labor Saving Slugs

Labor-Saving Leads and Slugs

Our Labor-Saving Leads and Slugs are accurately trimmed to measure on improved machinery. The leads pass between two rapidly revolving trimming heads which can be adjusted so finely that the highest standard of accuracy is secured.

A twenty-five pound font of 2-point labor-saving leads is composed of sixty-two pieces each, 4 to 25 ems inclusive. Other sized fonts in proportion. Special scheme fonts can be made up to any desired scheme. Packages of five pounds are made up and carried in stock in all lengths from 4 to 36 ems. Other lengths are cut to order, but can be obtained on short notice.

American Line Leads for Rapid Justification

These are special fonts of Labor-Saving Leads, cut from 1 em to 20 ems for use in lining type cast on American Line or the lining system of other foundries. These fonts are cut from 1 point, 2 point and 3 point leads, and put up as follows:

1 Point Brass Leads—Font contains seven pieces each 1 to 10 ems graduated by 6 points; seven pieces each 11 to 14 ems graduated by 12 points; and five pieces each 15 to 20 ems graduated by 12 points. Font measures about 260 inches.

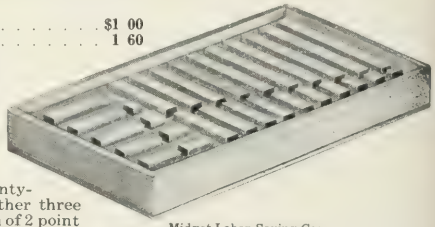
Price, without Case $1 00
Price, with Midget Case 1 60

2 Point Metal Leads—Font contains twelve pieces 1 to 10 ems graduated by 6 points; also twelve pieces each 11 to 20 ems graduated by 12 points. Font weighs 4 pounds.

Price, without Case $1 00
Price, with Midget Case 1 60

3 Point Metal Leads—Font contains eight pieces each 1 to 10 ems graduated by 6 points; also eight pieces each 11 to 20 ems graduated by 12 points. Font weighs 4 pounds.

Price, without Case $1 00
Price, with Midget Case 1 60

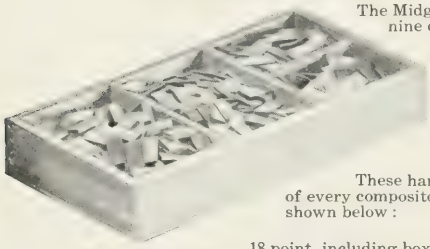


Midget Labor-Saving Case

The Midget Labor-Saving Case

The Midget Labor-saving Case has twenty-nine compartments and will hold either three fonts of 1 point, or one font each of 2 point or 3 point. Size of case, 4⅝x8½ inches. The Midget Case filled with short lengths of leads is an exceedingly handy thing for compositors, and will save many unnecessary trips to the main lead and slug case.

Price of Case $0 60



Short Leads and Slugs

Short Leads and Slugs

These handy little cases speak for themselves. They are almost essential in the equipment of every compositor. Each font contains 1, 2, 3 and 6 point thicknesses cut to one of the bodies shown below:

Prices of Short Leads and Slugs

18 point, including box	$1 50	48 point, including box	$1 50
24 point, including box	1 50	60 point, including box	1 50

Leads and Slugs in Strips, 2, 3, 6 and 12 point are packed one hundred and fifty pounds to the box, and are sold at slightly lower prices for this quantity.

2 point and thicker, 12 lb. labor-saving font $2 40
2 point and thicker, 25 lb. labor-saving font 5 00

These standard size fonts are carried in stock. Every office should be liberally supplied with 2 point leads and 6 point slugs.

Angular Quads

Angular Quads were introduced by the American Type Founders Company and will be found a great convenience when setting rules and lines at an angle. There will always come a time when these Quads are needed and it will pay printers to have a font ready. Angular Quads are cast in type molds and range in sizes from twelve points to seventy-two points. Each font contains twenty-eight pieces, conveniently assorted to meet ordinary requirements, but when additions are required, sorts may be added at the prices listed.

Circular Quads

We can now offer a more complete font of Circular Quads than heretofore. With this font a great variety of curved lines can be made very quickly. The font is made up of ninety-six pieces, cast in the following lengths: sixteen pieces of twelve picas, sixteen pieces of nine picas, sixteen pieces of seven picas, sixteen pieces of six picas, sixteen pieces of five picas and sixteen pieces of three picas. The various pieces are quickly adjusted with quads and leads to make the required circles. For label and similar work Circular Quads quickly pay for themselves.

The accompanying illustration shows some of the pieces in the font of Circular Quads considerably reduced in size.

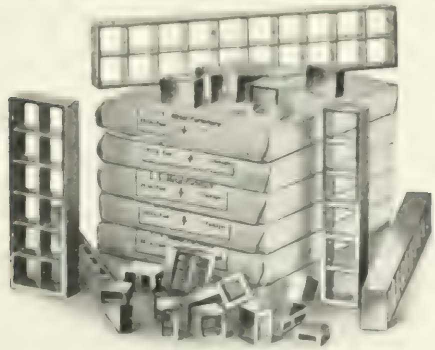
These quads are accurately cast.

Circular Quads (Illustration slightly reduced)

Circular Quads, put up in a neat box, price per font $3 50

Labor-Saving Metal Furniture

This popular design of metal furniture is cast from high grade metal and accurately finished with improved machinery.



Labor-Saving Metal Furniture

Made in 2, 3, 4, 5, 6, 8 and 10 em widths, and 4, 5, 6, 8, 10, 15, 20, 25, 30, 40 and 50 em lengths. The twenty-five pound font includes sizes from 2x4 to 10x25 ems. Fonts fifty pounds and larger include sizes from 2x4 to 10x50 ems.

Capacity of Fonts

A twenty-five pound font of Improved Metal Furniture as regularly assorted covers 235 square inches—about 9½ square inches to the pound. An assortment of smaller lengths, up to 10x12, will cover about 6½ square inches to the pound.

Flicker Combined Benzine Can and Brush

In the Flicker Benzine Can and Brush, as its name implies, the can and brush are combined, thus making it into a quick and handy article. The can is filled with benzine and the act of using it permits a certain quantity of benzine, sufficient for cleaning the type, to pass through a small tube into the brush. It is economical, as by its use both benzine and time are saved, sufficient to cover its cost in a few days. A new brush can be attached at any time.

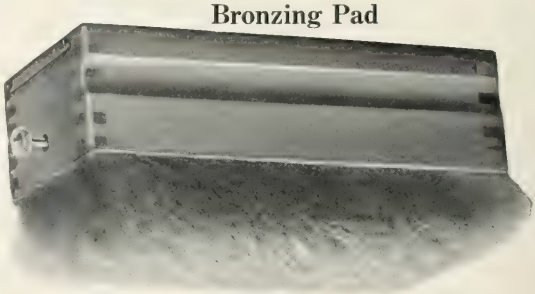
Bronzing Pad



Bronzing Pad

The bronzing pad has become an article of necessity in the pressroom as it effects economy in time and bronze, and insures clean work. The bronze is received in a cavity on the top (closed tightly with a slide) and is delivered through valves, which are opened and closed by the thumbscrew at the end, which regulates the flow of bronze into a sieve in the midst of fine fur. The bronze is fed only where, and just when it is wanted on the work, and is not scattered over the table.

Large, 2½x6 inches	$2 50
Small, for light work, 2½ inches square	1 50

Bronzing Mitten

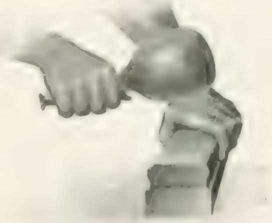
These Mittens are made of sheep's wool with back of strong cloth. They are convenient for bronzing and are made impervious to bronze.

Price, each	$0 50

The Robinson Improved Printer's Mallets

There is many a little printing office accessory, the utility of which has become so manifest and the article so generally used that the wonder is the idea did not suggest itself sooner. This process will repeat itself in connection with the Robinson Improved Printer's Mallet, the illustrations of which we show here. The hammer head of this Mallet is ovoid, or egg shaped. A blow struck upon the planer is always a square blow, which is a most important consideration when striking a proof. It is not possible to strike a glancing blow with this Mallet. There are no sharp corners to wear away, slip or mar the delicate type faces.

Robinson Improved Mallet



This mallet stands on end when not in use and in correct position to be quickly and rapidly grasped by the stone man at times when a second counts in the lock-up.

The Robinson Improved Mallet is made in five sizes of lignumvitae and hickory. The best selected stock is used and the surface is smooth and polished, finished with shellac. Each single mallet is packed in a paper carton, properly labeled as to contents. A trial order for one of those improved mallets will convince any printer of its superiority over other mallets.

List Prices and Dimensions of the Robinson Improved Mallets

Wood Quoins of All Kinds

There always has been and there always will be a demand for good Wood Quoins. There is a reason, as it is impossible to estimate the amount of type that is injured by iron quoins and keys. Besides wood quoins are cheaper than any other similar device. Wood Quoins are put up either in boxes, bags or barrels to suit the convenience of our customers.

Wood Quoins in Boxes

Wood Quoins in Boxes

For the convenience of customers requiring but a small quantity we have had one hundred quoins put up in a neat box ready for delivery. You can have them either made of hickory, boxwood or lignumvitae, but the boxes do not come assorted.

Quoins in Barrels and Bags

For large orders of Wood Quoins we have them put up in barrels and burlap bags. The barrels contain about 7,500 Quoins.

The Dixie Hand Cleaner

This hand cleaner has been prepared for printers and pressmen especially. It has antiseptic properties that cure chapped hands and keep the skin smooth and soft. It is one of the best hand cleaners on the market, and is guaranteed to give perfect satisfaction. It goes down into the pores and removes the dirt and grime. It may also be used for household purposes, and will be found excellent for cleaning pots, kettles, tinware, floors, white paint, etc.

The Dixie Hand Cleaner

Price, per can $0 10

Kleenu

Kleenu is a harmless and antiseptic preparation, which is better than soap for dirty hands. It is a great necessity in the printshop, as it removes, with remarkable quickness and thoroughness, all stains, grease stains and dirt which are unaffected by soap. For general hand-cleansing purposes it is without an equal.

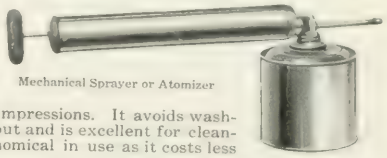
American Roller Spray

The American Roller Spray is a liquid preparation for retaining ink on the press and rollers without drying, and also for reducing ink to a useable condition, while still preserving the color and working consistency. The Roller Spray enables presses to be run up to the last minute of working time, thus effecting a great economy. It can be applied to any style cylinder or job press, in less than a minute, at the end of a day's run, and will keep the ink and rollers in perfect condition to begin work without delay. It is applied to the rollers, ink table or cylinder in a mechanical atomizer or sprayer and with a few revolutions of the press the Spray mixes with the ink. After applying the Spray the rollers should be left in the press. It protects the rollers from the atmosphere and prolongs their life. It removes dirt, fuzz and lint from the rollers while the press is running. It prevents the ink from caking, brightens up dull or muddy ink and produces clean, brilliant and smooth impressions. It avoids washing up at noon or night, increases output and is excellent for cleaning all kinds of machinery. It is economical in use as it costs less than a cent for any application.

American Roller Spray



Mechanical Sprayer or Atomizer

Price, American Roller Spray, One Gallon Can $3 00
Also put up in three and five gallon cans.
Sprayers, each. 75

C. E. Donnell's Ink Regulator

Donnell's Ink Regulator is a combined ink reducer and dryer. It will increase the quality of any ink from twenty-five to fifty per cent. It enables one to print and back work on any quality of paper in from ten minutes to one hour without the least offset. It will work in all qualities and colors of ink equally well. Old inks can be used.

Inkoleum

A liquid preparation for reducing and refining printing inks, without impairing their color. Inkoleum has been on the market a number of years and has made good. It is a splendid preparation to have in the pressroom when ink, paper and weather are at loggerheads. Try a bottle and note the results.

Price per bottle, half pound $0 50

Inkoleum

Burbank's Embossing Composition

This is a semi-liquid chemical preparation for making counter dies for embossing. The composition is spread over a piece of cardboard glued to the platen of the press and covered with two sheets of tissue paper. The impression of the die is then made upon the composition, which results in a perfect counter die. Well adapted for use on all classes of embossing presses.

Prices of Embossing Compositions

Richter's Metal Cleaner

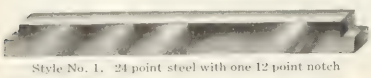
Promptness in filling orders is usually an important factor. The American Type Founders Company, with its vast facilities and its selling houses in nearly all the important cities of the country, is particularly well adapted to fill every order for supplies of every description used by printers, with promptness and despatch.

Steel Furniture

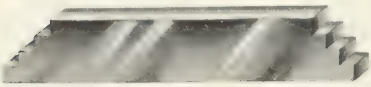
Steel Furniture has been in use for many years past and is one of the greatest labor-savers ever introduced to the printing trade It is a well tried and useful device for saving time in making up and locking up printing forms. It is made from especially cold drawn steel, accurate in every dimension to the thousandth part of an inch, and cut to accurate lengths with milled notched ends, which can be quickly set around blank spaces instead of filling them in the ordinary way with wood or metal furniture.



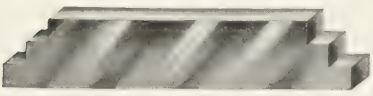
Style No. 1. 24 point steel with one 12 point notch

Style No. 2. 36 point steel with two 12 point notches

Style No. 3. 36 point steel with one 18 point notch



Style No. 4. 48 point steel with three 12 point notches



Stye No. 5. 54 point steel with two 18 point notches

For color and blank work it is exceptionally valuable, as it eliminates shrinkage due to changes in temperature. Weight for weight it goes six times as far in filling space as metal furniture and can be used in from one-half to one-sixth the time. It is practically indestructible, and being made of steel, always remains accurate. Four pieces each forty-two picas long will fill a blank of forty-nine square inches, weigh but little, be almost instantly installed and prove more secure with a minimum of pieces. Using the larger pieces, eight will fill a blank twelve by twenty-four inches, or two hundred and eighty-eight square inches. The few pieces required for large spaces, its security, and little liability to damage by use or from corrosion, gives this steel furniture advantages possessed by no other material for the purpose.

List Prices and Styles of Steel Furniture

Font A has eight pieces each 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40 and 42 picas of Style One, and 45, 48, 51, 54, 57, 60, 63, 66, 69 and 72 picas of Style Two, two hundred and twenty-four pieces. List price . . $54 00

Font B is half of Font A, one hundred and twelve pieces. List price 27 00

Font C, first section of Font A, one hundred and forty-four pieces. List price 29 00

Font D has half the quantity of Font C, seventy-two pieces. List price . . . 14 50

American Bookbinders' Steel Wire

The American Bookbinders' Steel Wire is drawn especially for us and is the very best obtainable. The quality of wire used upon the various wire stitching machines has much to do with their successful operation. It is therefore advisable and more economical to buy nothing but the best. We recommend American Bookbinders' Steel Wire.

Bookbinders' Steel Wire

Each spool holds five pounds of wire and a case contains twenty spools. Spools are charged for to be rebated at same rate when same spools are returned to seller, freight prepaid, and in good condition.

The following prices apply to our best quality Tinned Bookbinders' Wire and to lots of one size. In lots of five hundred pounds and more special prices will be made according to market. We shall be pleased to quote current prices and discount on application. While the prices given below may to a great extent be relied on, there are times when the fluctuations in the cost of materials make it impossible for us to guarantee them absolutely and they are therefore subject to change without notice. As the American Type Founders Company supplies a very large part of the wire used in the various binderies in this country, it is in a position to secure from the manufacturers a high quality of wire which by its long and varied experience it knows to be eminently suited for bookbinders' requirements.

List Prices of Bookbinders' Steel Wire

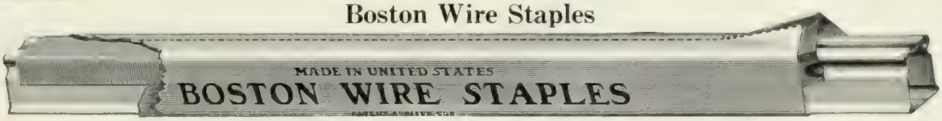
Round Wire	Less than 100 pounds	100 pounds and under 500 pounds
Nos. 18 to 23 Round, per pound	$0 12	$0 09
Nos. 24 and 25 Round, per pound	12	10
No. 26 Round, per pound	13	11
No. 27 Round, per pound	14	12
No. 28 Round, per pound	15	13
No. 30 Round, per pound	16	14
Flat, per pound	14	12

The above prices, as has already been stated, are based on the current market prices, which are subject to fluctuations. Special prices will be quoted on lots of five hundred pounds and more. The lowest market price for high grade wire will always govern regardless of the above prices.

Wire Staples for all Machines

The American Type Founders Company is also the largest dealer in Wire Staples for printers' and bookbinders' use. We supply millions of them annually and consequently are in a position to quote the very lowest prices on the very highest grade staples. We exercise the same care and attention in the selection of our Wire Staples for all machines as we do in choosing the highest type of printing machine. That is probably the reason why we sell so many staples. There are thousands of stapling machines in use in the smaller printing offices throughout the country and they are always consuming staples. The next time you are in the market for staples, send us an order; we shall be pleased to supply you and you will be readily convinced of the unusually high quality of our staples. The American Staples are all arranged in the most practical and convenient manner and are put up in neat boxes.

Boston Wire Staples

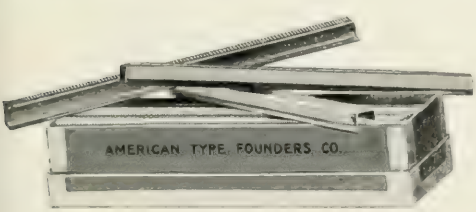


The Metal Core, Pusher, Paper Covering and Staples

Prices of Boston Wire Staples, either size, are as follows:

5,000 lots, per box of 5,000	$0 90	50,000 lots, per box of 5,000	$0 70
25,000 lots, per box of 5,000	75	100,000 lots, per box of 5,000	65

Yarger Staples



A Box of Yarger Staples

These staples are furnished on tin sticks, fastened with a strand of wire and are much superior to the old style with wooden sticks held with rubber bands. All sizes carried in stock for Yarger Binders Nos. 1, 2, 4, 5, 6, 7, 8, 9 and 10. Give number of staple or style of binder and size of staple desired when ordering. Can be supplied at a moment's notice.

Nos. 1 to 15 per box of 5,000 of one size $0 90

Larger quantities at same prices as Boston Wire Staples quoted above.

Nos. C, D, E, L, M and N per box of 1,000 of one size 25

Acme Staples

We carry a large stock of staples for the Sure Shot Binder and Acme Binders Nos. 1, 4 and 6. There is no delay in filling orders.

Staples Nos. 21, 22, 23, 24, X, XX. Per box of 5,000 of one size $0 90

Larger quantities at the same prices as Boston Wire Staples quoted above

Table Showing Number of Wire Staples to One Pound of Wire

To ascertain the number of staples to one pound of wire, measure full length of wire in staple, go to first column on left of table and pass down same until you reach the size that corresponds with staple measured; pass along to right until you reach size of wire used, shown by top row of figures. Example: If your staple measures 1½ inches, and the size of wire is No. 28, there are 11,940 staples to one pound as shown in following table submitted for convenience of our patrons.

Length of Wire in Staple	18	19	20	21	22	23	24	25	26	27	28	29	30

Hamilton Newspaper File

This is the most satisfactory newspaper file in use today. It is strong and efficient, yet simple in operation. Thousands of these Files are in use in the best newspaper offices in the country. Made of oak, nicely finished with brass fastenings and polished steel thumbscrews. The method of closing and opening the File is novel and simple. The clasp end of file has a flat-headed thumbscrew (see cut), which is passed through a slot, and by giving the screw a quarter turn the File is securely locked. When the head is turned parallel with the File it opens instantly. Files in the following sizes are in stock; other sizes to order: Four-column paper, sixteen and one-half inches clear, ten ounces. Five-column paper, twenty and one-half inches clear, eleven ounces. Six-column paper, twenty-two and one- half inches clear, twelve ounces. Seven-column paper, twenty-four and one-half inches clear, thirteen ounces. Eight-column paper, twenty-six and one-half inches clear, sixteen ounces. Nine-column paper, twenty-eight and one-half inches clear, seventeen ounces. The sizes given above allow one-half inch play.

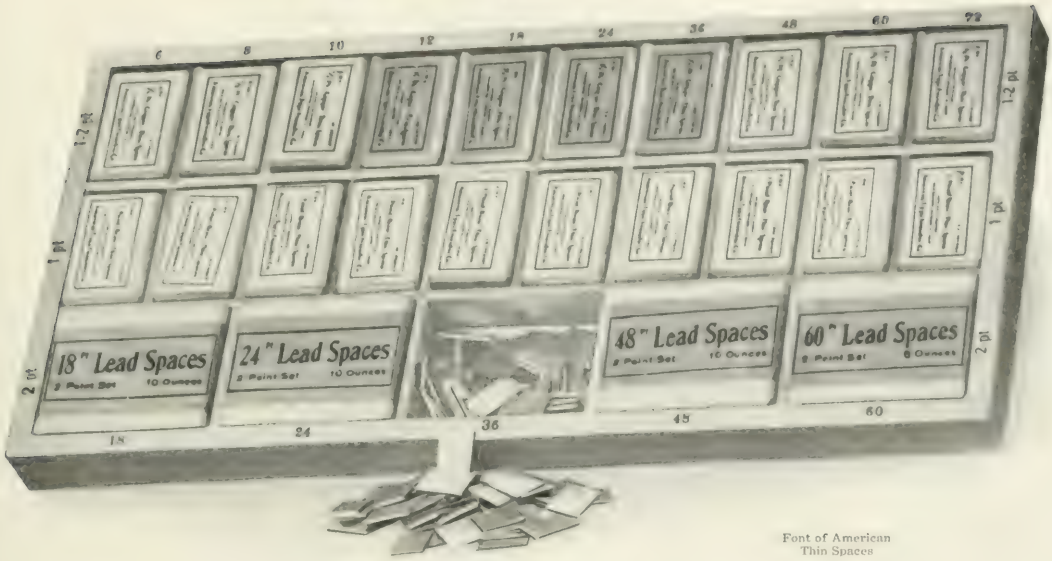
Brass and Copper Thin Spaces

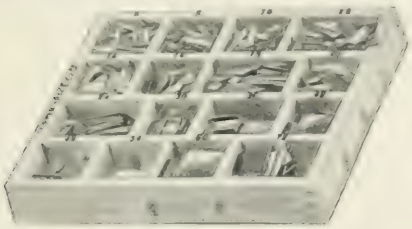


Font of American Thin Spaces

BRASS AND COPPER THIN SPACES

Make justification so easy that no office should be without them

That these ½ Point Copper and 1 Point Brass Thin Spaces may be readily distinguished, the ½ Point Spaces are made of Copper and the 1 Point Spaces are made of Brass.

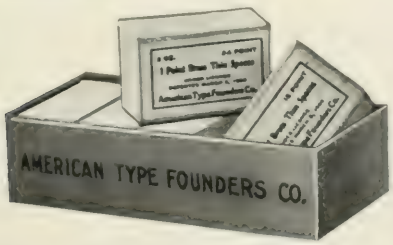


Style of Fonts Nos. 1, 2 and 3

Assortment No. 1. ½ Point Copper Thin Spaces. This font includes assortment of 6, 8, 10, 12, 14, 16, 18, 20, 24, 30, 36, 42, 48, 60 and 72 Point sizes, put up in wooden case, 16 ounces.
Price, including case $1 75

Assortment No. 2. 1 Point Brass Thin Spaces. This font includes assortment of 6, 8, 10, 12, 14, 16, 18, 20, 24, 30, 36, 42, 48, 60 and 72 Point sizes, put up in wooden case, 16 ounces.
Price, including case $1 75

Assortment No. 3. Assorted ½-Point Copper and 1 Point Brass Thin Spaces. This font includes an equal amount of both ½ Point Copper and 1 Point Brass Thin Spaces cut the following sizes: 6, 8, 10, 12, 14, 16, 18, 20, 24, 30, 36, 42, 48, 60 and 72 Point, put up in wooden case, 16 ounces.
Price, including case $1 75



Style of Fonts Nos. 4, 5, 6, 7 and 8

Assortment No. 4. ½ Point Copper Thin Spaces. This font includes a two ounce package each 12, 18, 24, 36 and 48 Point, 10 ounces.
Price $1 00

Assortment No. 5. 1 Point Brass Thin Spaces. This font includes a two ounce package each 12, 18, 24, 36 and 48 Point, 10 ounces.
Price $1 00

Assortment No. 6. ½ Point Copper and 1 Point Brass Thin Spaces. This font includes an assortment of two ounces of each of the following sizes: 12, 18, 24, 36 and 48 Point, 10 ounces.
Price $1 00

Assortment No. 7. ½ Point Copper Thin Spaces. This font includes a two ounce package each 6, 8, 10, 12 and 18 Point, 10 ounces.
Price $1 25

Assortment No. 8. 1 Point Brass Thin Spaces. This font includes a two ounce package each 6, 8, 10, 12 and 18 Point, 10 ounces.
Price $1 25

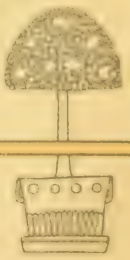
Steel and Iron Equipments

WHEN properly made, Steel and Iron Printing Plant Equipments are undoubtedly more economical than those made entirely of wood, because of their superior stability and durability. The economy of them is not to be measured by first cost, but by their practical indestructibility and the continuance of their good and dignified appearance after long use. When wooden equipments (bought at the same time) have become shaky, shop-worn and shabby, steel and iron equipments will be giving undiminished satisfaction. In buying well-made Steel and Iron Equipments printers are making an investment for their grandchildren. There is nothing so economical and lasting. These are the only Composing Room Equipments that may be depended upon to

Keep the Printing Plant Young



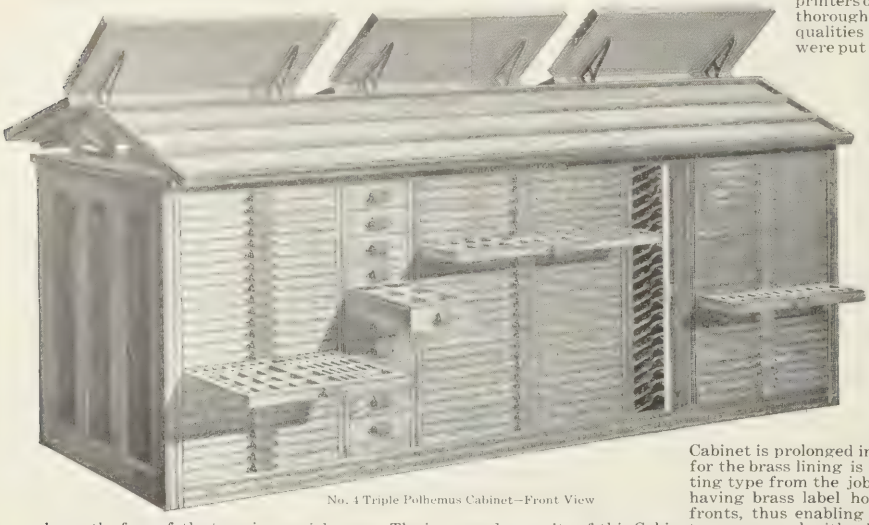
American Type Founders Company

A Composing Room Equipped with Polhemus Cabinets

In starting a new office it is advisable to thoroughly consider the installation of modern equipment, thus saving greatly in space as well as making it more convenient for the workmen

The Polhemus Cabinets

It is a remarkable fact that from the day of their first introduction the Polhemus Cabinets took the lead and are still considered among the most popular type cabinets. Perfected by and named after the late Mr. John Polhemus, at one time one of the leading printers of New York City, they were thoroughly tested and their sterling qualities fully proved before they were put upon the market. The No. 4 Triple Cabinet with seventy-five job cases is the king pin of the line. It is a veritable printing office in itself. It has steel runs and contains seventy-five cases; ten sort drawers; storage room for twenty double-column galleys; fifteen square feet of storage in the galley dump for tied-up matter and standing forms; three pairs news cases on top. If necessary six men can work at this Cabinet at the same time without interfering. The practical value of this splendid Cabinet is greatly enhanced by brass lining the full length galley dump shown in the illustration. With such a bank no moisture can enter the woodwork and the life of the Cabinet is prolonged indefinitely. (The extra cost for the brass lining is $35.00.) The labor of setting type from the job cases is also facilitated by having brass label holders attached to the case fronts, thus enabling the compositor to see at a glance the face of the type in any job case. The increased capacity of this Cabinet, as compared with other Polhemus Cabinets, particularly those with wood runs, places it at once at the head of the list as one of the best and most compact type cabinets ever constructed. This Cabinet embraces all the good features of Polhemus construction, combined with case concentration. It has the full length galley dump, the sort cabinet, the galley cabinet closed with door, and the patent tilting brackets with galley boards under the lower cases.

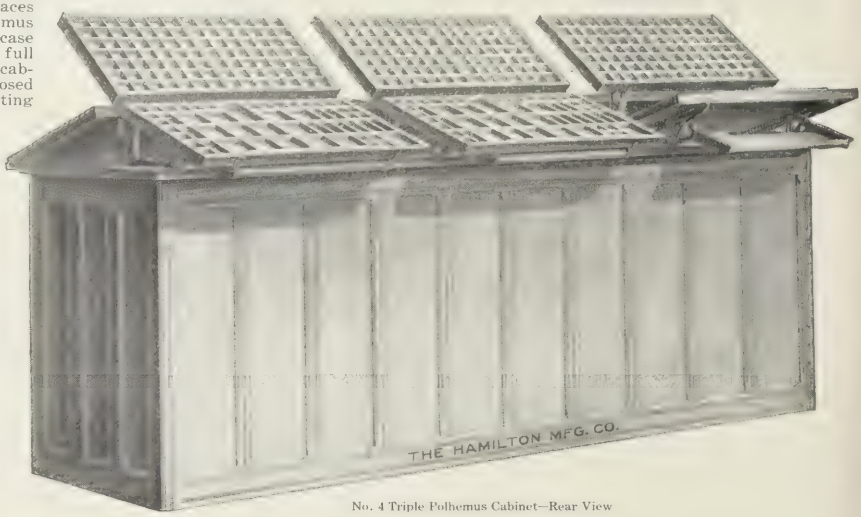


No. 4 Triple Polhemus Cabinet—Front View

No. 4 Triple Polhemus Cabinet. With Steel Runs, containing fifty two-thirds California job cases, twenty-five cases in each tier, and twenty-five full size California job cases, in the center tier; three pairs of news cases and three pairs of No. 1 Hamilton Patent Tilting Brackets on top. Galley boards under lower cases. Full length galley dump, one tier of sort drawers and one series of galley shelves.

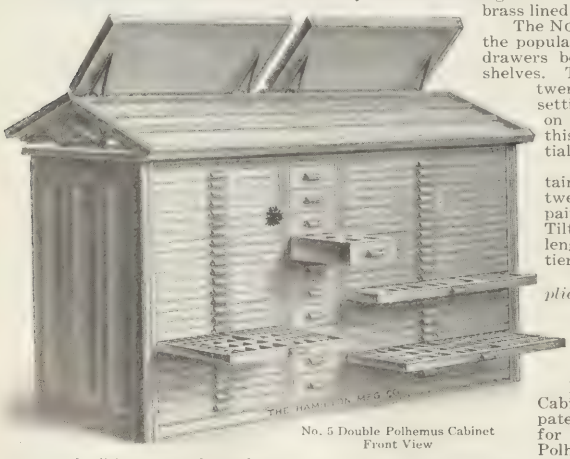
List Price and Dimensions

Height, 44⅜ inches; width, 104 inches; depth, 27 inches. Weight, crated for shipment, 1175 lbs. List price **$140 00**



No. 4 Triple Polhemus Cabinet—Rear View

NOTE.—The galley dump on this No. 4 Triple Polhemus Cabinet can be furnished full brass lined, using No. 21 gauge patent leveled sheet brass for the bottom and square brass tubing for the surrounding rim and division strips. Extra to list price for brass lined dump, **$35.00.**



No. 5 Double Polhemus Cabinet Front View

The No. 5 DOUBLE POLHEMUS CABINET illustrated here is also one of the popular Polhemus Cabinets. Many printers prefer the tier of sort drawers between the two tiers of cases, in lieu of the tier of galley shelves. This Cabinet represents the extreme of case concentration, twenty-five cases in each tier within working height for type-setting purposes. It has the full length galley dump and job cases on the reverse side from the news cases. Four men can work at this Cabinet without interfering. Polhemus Cabinets are essentially space and material savers, therefore money makers.

No. 5 DOUBLE POLHEMUS CABINET. With Steel Runs, containing twenty-five full size California job cases in one tier, and twenty-five two-thirds California job cases in the other tier, two pairs of news cases and two pairs of No. 1 Hamilton Patent Tilting Brackets on top, with galley boards under lower cases. Full length galley dump and one tier of sort drawers between the two tiers of cases.

The series of Polhemus Cabinets shown on this page will be supplied without brass lined galley dump unless otherwise ordered.

List Price and Dimensions

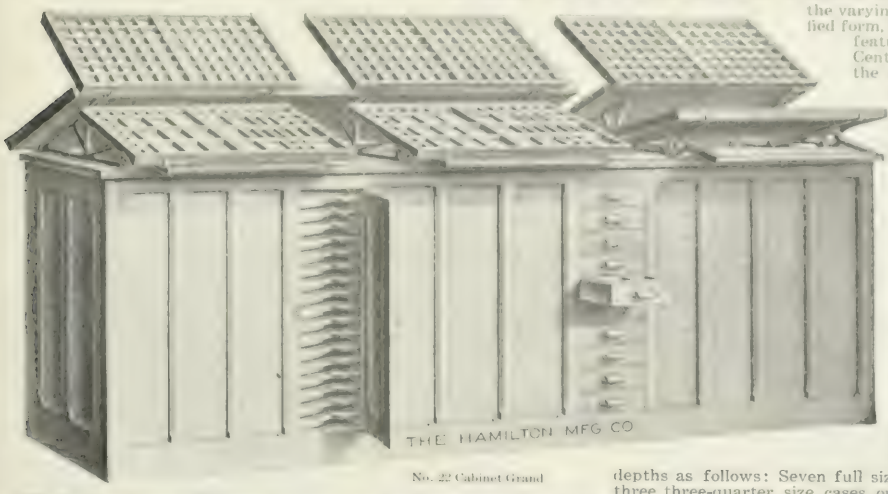
Height, 44⅜ inches; width, 70 inches; depth, 27 inches. Weight, crated for shipment, 700 pounds. List Price **$95 00**

NOTE.—The galley dump on this No. 5 Double Polhemus Cabinet can be furnished full brass lined, using No. 21 gauge patent leveled sheet brass for the bottom and square brass tubing for the surrounding rim and division strips. All screws on the Polhemus Cabinets are placed from the under side in order to make a smooth all brass top throughout. Extra to list price for brass lined dump, **$24.00.** Brass Label Holders, 1x3 inches, attached to any cabinet, at an addition to the list price of five cents per case.

The prices quoted here are subject to our usual discounts.

The Cabinets Grand

Every feature of recognized merit found in any other style of type Cabinet is embodied in the construction of the No. 22 Cabinet Grand. It possesses the extension fronts to job cases, the distinctive feature of the Porter construction; the placing of the news and job compositors on opposite sides, and the full length galley dump, which are the distinctive features of Polhemus construction; the varying depth of cases in modified form, which is the distinctive feature of the Twentieth Century construction. It has the series of sort drawers, and the tier of galley shelves opening from the news side. It has a space and quad case, a seventy-two inch lead and slug case, with duplicate compartments, on the job side. It is supplied with the new improved Three-Case Tilting Bracket, with galley boards under the lower cases.



No. 22 Cabinet Grand

No. 22 Cabinet Grand contains a total of seventy California job cases arranged in three tiers, one tier of twenty-four full size cases, one tier of twenty-three three-quarter size cases and one tier of two-thirds size cases. These job cases are of three different outside depths as follows: Seven full size cases one inch deep; three three-quarter size cases one inch deep; fourteen full size cases one and three-eighths inches deep; seventeen three-quarter size cases one and three-eighths inches deep; three full size cases one and three-quarter inches deep; three three-quarter size cases one and three-quarter inches deep; three two-thirds size cases one and three-eighths inches deep; three two-thirds size cases one and three-quarter inches deep.

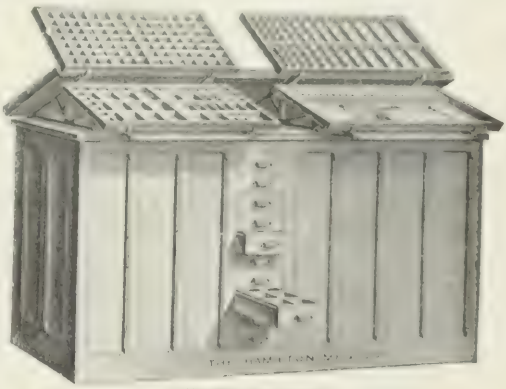
SORT DRAWERS. A series of ten Sort Drawers between the two tiers of cases, each Sort Drawer divided into ten equal size compartments, making one hundred compartments.

GALLEY SHELVES. A series of sixteen galley shelves enclosed by door, opening from the news side of the cabinet. The Shelves are inclined and wide enough to take double column galleys.

TOP EQUIPMENT. Three pairs of No. 2 Three-Case Hamilton Patent Tilting Brackets, with galley boards under the lower cases, on which are placed the following cases: Three pairs of news cases, one blank case, one thirty-inch space and quad case, one No. 8 Bettis lead and slug case.

List Price and Dimensions of No. 22 Cabinet Grand

Height, 43 inches; width, 110½ inches; depth, 27 inches. Weight, crated for shipment, 1200 pounds. List price, complete with full top equipment **$150 00**



No. 20 Cabinet Grand

The No. 20 Cabinet Grand contains a total of forty-seven California job cases, arranged in two tiers, one tier of twenty-four full size cases, and one tier of twenty-three two-thirds size cases. These cases are of three different outside depths as follows: Seven full size cases one inch deep; three two-thirds size cases one inch deep; fourteen full size cases one and three-eighths inches deep; seventeen two-thirds size cases one and three-eighths inches deep; three full size cases one and three-quarter inches deep; three two-thirds size cases one and three-quarter inches deep.

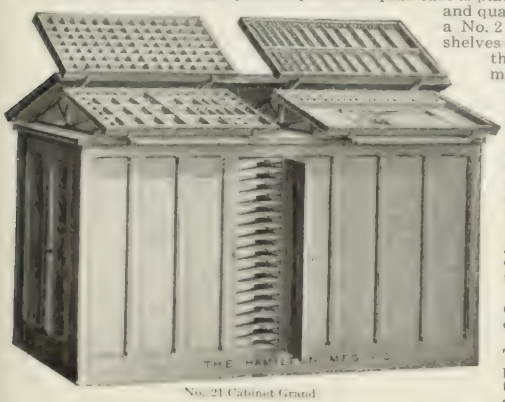
SORT DRAWERS. A series of ten Sort Drawers between the two tiers of cases, each Sort Drawer divided into ten equal size compartments, a total of one hundred compartments.

TOP EQUIPMENT. Three pairs of No. 2 Three-Case Hamilton Patent Tilting Brackets, with galley boards under the lower cases, on which are placed cases as follows: One pair of news cases; one blank case; one thirty-inch space and quad case; one No. 2 Adjustable lead and slug case, one No. 8 Bettis lead and slug case.

List Price and Dimensions of No. 20 Cabinet Grand

Height, 43 inches; width, 71 inches; depth, 27 inches. Weight, crated for shipment, 700 pounds. List price, complete with full top equipment **$100 00**

The news compositor on the No. 21 Cabinet Grand works undisturbed at the pair of news cases and dumps on the galley placed in the blank case. A thirty-inch space and quad case is placed back of the galley, wherein is carried a large assortment of spaces and quads in various sizes. Over the blank case on the upper bracket is placed a No. 2 adjustable lead and slug case, with center bar. A series of galley shelves is arranged between the two tiers of cases. With this arrangement the news compositor is not disturbed by the job man, and has all his material within reach.



No. 21 Cabinet Grand

CASES. The No. 20 Cabinet Grand contains a total of forty-seven California job cases, arranged in two tiers, one tier of twenty-four full size cases, and one tier of twenty-three two-thirds size cases. These cases are of three different outside depths as follows: Seven full size cases one inch deep; three two-thirds size cases one inch deep; fourteen full size cases one and three-eighths inches deep; seventeen two-thirds size cases one and three-eighths inches deep; three full size cases one and three-quarter inches deep; three two-thirds size cases one and three-quarter inches deep.

The cases one inch deep will easily take all small and medium size job fonts; the one and three-eighths inch cases are standard; the cases one and three-quarter inches deep are useful for holding large advertising fonts and metal type of large size.

GALLEY SHELVES. A series of sixteen Galley Shelves, enclosed by door, opening from the news side of the Cabinet. The shelves are inclined and wide enough to take double column galleys.

TOP EQUIPMENT. Two pairs of No. 2 Three-Case Hamilton Patent Tilting Brackets, with galley boards under the lower cases, on which are placed cases as follows: One pair of news cases; one blank case; one thirty-inch space and quad case; one No. 2 Adjustable lead and slug case; one No. 8 Bettis lead and slug case.

List Price and Dimensions of No. 21 Cabinet Grand

Height, 43 inches; width, 71 inches; depth, 27 inches. Weight, crated for shipment, 700 pounds. List price, complete with full top equipment. **$100 00**

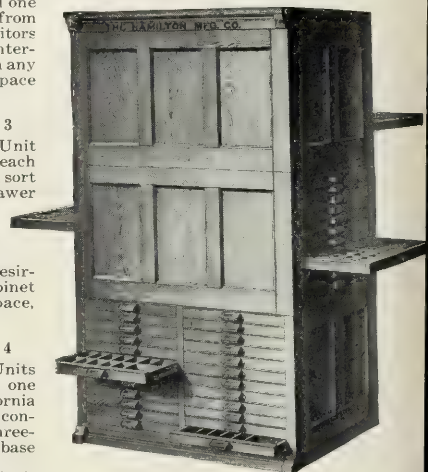
Reversible Unit Cabinets

Reversible Unit Cabinet Combination No. 1. This Cabinet is made up by combining one Unit No. 10 with twelve large cases, California pattern; one Unit No. 12 with twenty-four half size Wells job cases; one cap piece and one base piece; one Bank No. 1; one pair tilting brackets with one pair of news cases. Occupies floor space twenty-five by thirty-five inches.

Reversible Unit Cabinet Combination No. 1

Reversible Unit Cabinet Combination No. 2

This Cabinet is made by combining one Unit No. 12, holding twenty-four half size Wells job cases; one Unit No. 16, holding twenty-two California job cases, two-thirds size, pulling from the ends; one Unit No. 10, holding twelve large California job cases; one cap piece and one base piece. Note that the cases draw from four sides of the Cabinet. Four compositors can set type from this Cabinet without interfering. This is something not obtainable in any other type of cabinet. Occupies floor space twenty-five by thirty-five inches.



Reversible Unit Cabinet Combination No. 2

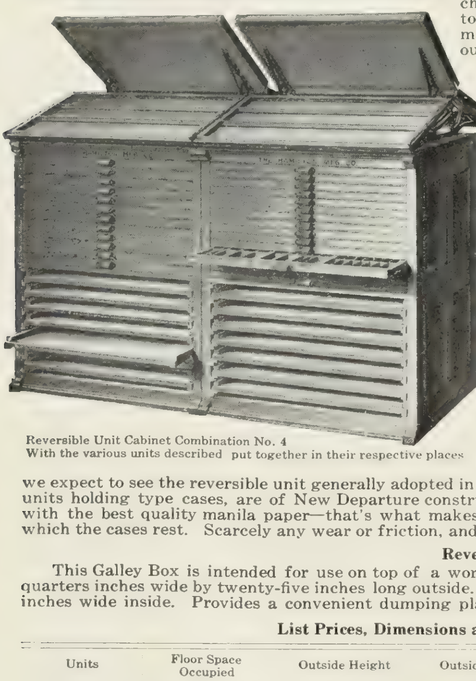
Reversible Unit Cabinet Combination No. 3

This Cabinet is made by combining one Unit No. 20, containing twenty-four sort drawers, each drawer having fourteen removable individual sort boxes; (the second unit above the sort drawer unit can be selected to suit the requirements of any printing office); one base piece and one cap piece; one galley box; two pairs New York case brackets; two pairs of news cases. This Cabinet combines all the desirable features of a window cabinet, a unit cabinet and a Polhemus cabinet. Occupies floor space, twenty-five by thirty-five inches.

Reversible Unit Cabinet Combination No. 4

This Cabinet is made by combining two Units No. 22, each containing seven letter boards; one unit No. 10, containing twelve large California job cases, standard depth; one unit No. 11, containing fifteen large California job cases three-quarters of an inch deep inside the rail; two No. 1 banks, two cap pieces and two base pieces; two pairs of tilting brackets; two pairs of news cases on brackets.

This makes a cabinet with all the desirable features of the unit system, and one which can be made into two single cabinets by separating the two sections; a cabinet which can be changed at will, reversed or added to in order to meet the requirements of a growing office. When you have in mind the equipping of your composing room, these cabinets should be seriously considered.



Reversible Unit Cabinet Combination No. 4
With the various units described put together in their respective places

Unquestionably one of the greatest improvements in printers' cabinet construction during recent years has been the addition of the unit system—a system which has grown and expanded from a small beginning until now it is found in all lines of trade where system has made any material progress. There are many points of superiority in the unit system over any other construction. It allows of expansion with a small outlay. A single unit will often provide the additional room required, and the expense involved in the purchase of a complete new cabinet is avoided. At the same time the cabinet will always be complete and the general balance of the office equipment will be maintained.

Heretofore the unit system, so far as printing office furniture is concerned, has not been attempted beyond regular type cabinet construction. The line of units now offered allow almost unlimited possibilities in the way of different combinations including type case units, of various patterns, galley units, letter-board units, and sort drawer units. This allows the furniture in any printing office equipped with these new reversible units to be kept at an even balance. If new fonts of type are added, a unit containing a few type cases can be ordered.

If more storage room is required for tied up forms, a letter board unit can be added. A branching out in legal blank or railroad work may require the purchase of a sort drawer unit, etc. In connection with this, the fact that all these new units are made *reversible*, so as to face to the front or rear, or to pull from the ends, doubles the utility of the system. It is safe to say that there has never been offered to printers a line of cabinets possessing such a wide range of elasticity and adjustment, and we expect to see the reversible unit generally adopted in many of the up-to-date printing offices in the very near future. Reversible units holding type cases, are of New Departure construction—New Departure cases, with three-ply unbreakable bottoms covered with the best quality manila paper—that's what makes a new departure case. All fitted with new departure flat steel runs, on which the cases rest. Scarcely any wear or friction, and the life of the cases is prolonged indefinitely.

Reversible Unit Galley Box

This Galley Box is intended for use on top of a working cabinet, between two pairs of case brackets, It is ten and three-quarters inches wide by twenty-five inches long outside. It is provided with six galley shelves, which are nine and one-quarter inches wide inside. Provides a convenient dumping place and storage for galleys filled with body type, near the compositor.

List Prices, Dimensions and Weights of Reversible Unit Cabinets, etc.

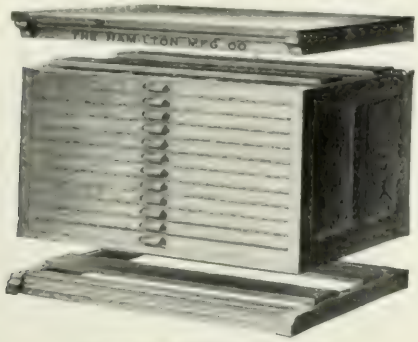
Two Units with Cap and Base make a Cabinet forty-two and three-quarters inches high. Three Units with Cap and Base will make a Cabinet sixty-two and one-eighth inches high. Four Units with Cap and Base will make a Cabinet eighty and three-quarters inches high. The price of Unit No. 20 includes the removable sort boxes, fourteen for each drawer, or three hundred and thirty-six separate boxes for each Unit.

Reversible Unit Cabinets and Banks

A composing room entirely equipped with Reversible Unit Cabinets would not only make a striking appearance but would also be the most convenient and time-saving outfit imaginable. Should a printer desire to change the layout of his composing room at any time the Unit Cabinets will be found very easy to move from one place to another, one unit at a time.

The American Type Founders Company will be pleased to give you additional information regarding these cabinets.



When you think of anything for the Printing Office also think of the American Type Founders Company

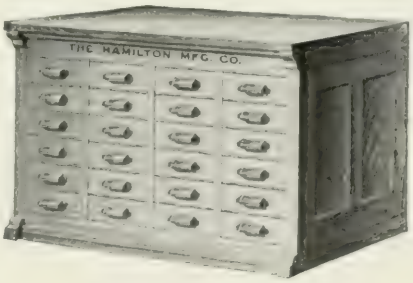
Reversible Unit Cabinet No. 10

Each Unit of this pattern is fitted with twelve of the large California job cases of standard depth. Size of these cases is thirty-two and one-quarter by twenty-one and one-half inches, outside measure. The cases in this Unit will easily take the very largest cap, lower case and figure fonts without crowding. No other type case has a like capacity.

Reversible Unit Cabinets Nos. 12 and 14

Reversible Unit No. 12 is fitted with twenty-four of the half size Wells job cases. The size of these cases is twenty-one and one-half by fifteen and one-half inches outside. In this unit the cases are all standard depth. Unit No. 14 externally the same as unit No. 12, but fitted with twenty-four half size Yankee job cases, which will conveniently hold all small and medium size cap, lower case and figure fonts.

Reversible Unit Cabinets are easily taken apart and quickly put together again

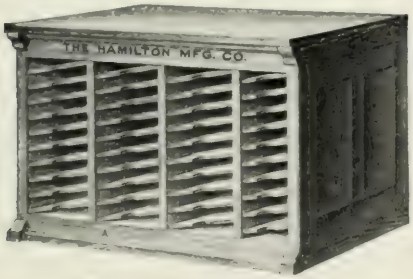


Reversible Unit Cabinet No. 16

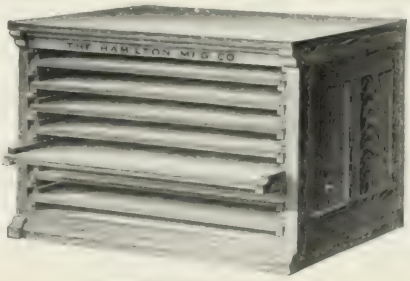
Unlike the other units of this series, the cases pull from both ends. By adding one of these units to a cabinet the arrangement can be such as to have cases pull from the four sides of the cabinet. Holds twenty-two California job cases, size fifteen and one-half by twenty-one and three-quarters.

Reversible Unit Cabinet No. 20

This Unit is fitted with twenty-four sort drawers, each sort drawer being filled with fourteen removable sort boxes. The size of each sort box is two and three-eighths by two and three-eighths by two and one-eighth inches inside. The side rails of the drawers are cut away, leaving the sort boxes projecting above the rails, which allows their easy removal.



Your compositors will like them and be enabled to do better work



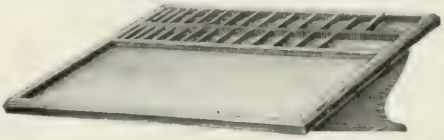
Reversible Unit Cabinet No. 21

This Unit has four tiers of galley shelves, each tier taking nine galleys, or thirty-six galleys to the Unit. Three tiers are for double column galleys, having a width of eight and one-eighth inches in the clear. One tier takes single column galleys having a width of six inches.

Reversible Unit Cabinet No. 22

This Unit is fitted with seven large letter boards, size of each board twenty-two by thirty and one-quarter inches inside, with one-half inch lip at front to receive the brass galley. Provides thirty-two square feet of letter-board surface in each Unit for the storage of standing forms and tied-up matter.

A modern practical idea



Reversible Unit Bank No. 1

Length, thirty-five inches; width, seventeen inches, outside measure. Divided into three equal spaces, each space four and five-eighths by thirty-three inches inside. This bank makes a convenient working space and provides storage room for standing jobs. It is intended to be used at the back of a pair of case brackets holding a pair of news cases. While the investment is somewhat greater in equipping a composing room in a modern manner, yet in the long run the modern way will undoubtedly be found the most economical.

For List Prices and general description of the Reversible Unit Cabinets and Banks, see preceding page.

Reversible Unit Bank No. 2

Length, thirty-five inches; width, twenty-eight and one-half inches, outside measure. It has a working space at the front thirty-three inches long by sixteen and three-quarters inches wide, inside measure. At the back is an adjustable lead and slug rack divided into sections, each four and one-quarter inches wide. This rack is slotted at intervals of two picas and the division strips can be adjusted to meet requirements.

Cap pieces add two and three-quarters inches and base piece two inches to height.

Units occupy floor space 25x35 inches; height 19 inches

The American Steel Run Cabinet No. 2

This new Cabinet is an exclusive design of the American Type Founders Company, and embodies the latest ideas in cabinet construction. It contains forty-four extra depth cases, one or more of which may be blank to hold individual quarter cases for rules, fractions, leaders, figures, accents, etc., the others being California job cases, or assorted, as desired.

The American Cabinet—Case Side

The four upper cases project gradually to permit easy access to rear boxes. The cases have mortised fronts for labels and are mounted on steel runs which are firmly fastened in the frame of the Cabinet. Ample clearance is provided above side rail, consequently heaping full boxes will not clog the cases.

The bank, on case side, is eighteen by seventy-two inches, and may be utilized for working space or to carry metal furniture or lead and slug cases. At the back of lower bank, on working side, are special cases for brass and copper thin spaces from six point to seventy-two point, justifying one point brass leads from six and one-half to eighteen ems, and two point leads from one to ten ems by one-half ems, and from ten to twenty-two ems by ems. Instead of the last, a thirty-inch space and quad case, for sizes from twelve to forty-eight point, may be substituted, if desired.

On the upper bank is placed an individual lead and slug case, with lip at bottom for holding sticks and copy. The case takes care of leads or slugs ranging from four to sixty em sizes. The justifying cases are mortised flush with the bank so that a galley or case may be placed on top. These justifying cases and the individual lead and slug case on upper bank, are removable. Underneath the bank are two deep copy drawers and a galley dump, nine by seventy-two inches.

This Cabinet may also be finished with plain work-bank without justifying cases. The individual lead and slug case, being removable, permits the upper bank to be used for upper cases when necessary.

Height to top of upper bank, fifty-seven inches; floor space, twenty-four by seventy inches.

The Porter Extension Front Steel Run Cabinet

This Cabinet possesses distinctive features which are found in no other cabinet, and which place it at the very front rank of all cabinets. It has been thoroughly tried by extensive printing establishments in all parts of the world, and all who have used it are enthusiastic in its praise. It has also been adopted in the Government Printing Office, at Washington, D. C.

The distinct feature of this Cabinet is the extension of the front. This enables the compositor to draw any case well out beyond the other cases, and makes the back tier of type boxes as accessible as any boxes in the case. It also allows, owing to the absence of extension side rails, the use of job cases on the brackets. The extension front also permits the top or bottom cases to be drawn from their places and placed at the proper height for type setting purposes.

Combined with the improved steel run and the extension front, the Porter Cabinet has all the excellent features of other steel run cabinets. The depth of the extension front is four inches. As these Cabinets are fitted on the twenty-three case and forty-six case sizes, with patented tilting brackets, they can be attached so that news cases on top are on the opposite side from the job cases. Unless otherwise stated, all Porter Cabinets are filled with California job cases.

The Porter Extension Front Steel Run Cabinets No. 6 and No. 7 have paneled backs while all other Cabinets of this series have plain backs. The cases ride upon the side rails only and the bottoms do not come in contact with the case runs.

The American Type Founders Company will always be pleased to offer practical suggestions to printers desiring to refurnish their composing rooms. We employ experts who are making this work a study and are responsible for some wonderful improvements for the printing office.

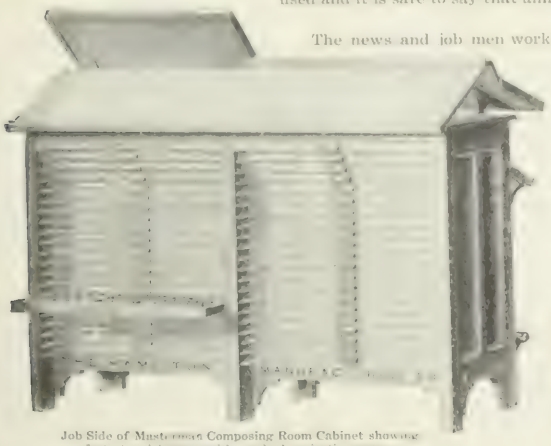
The Masterman Composing Room Cabinet

The Masterman Composing Room Cabinet is the result of much thought and experimenting on the part of one of New York City's greatest printers. That these ideas were practical is proven by the large number of Masterman Cabinets now in use in composing rooms where only the very best equipment is desired.

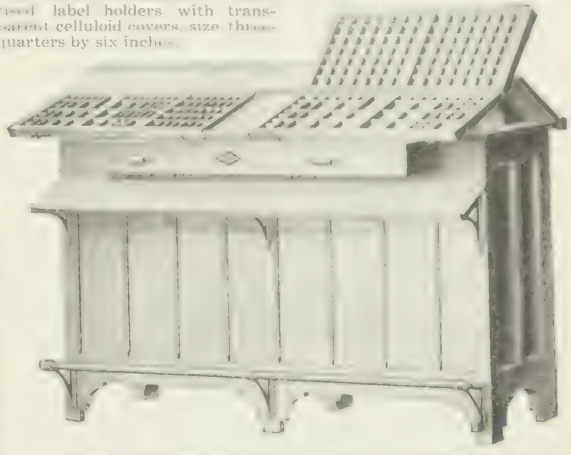
The evolution from the old style case stand to the highly convenient and economical composing room equipment as comprised in the Masterman Composing Room Cabinet has been remarkable. This Cabinet includes all the good features of any cabinet or stand ever used and it is safe to say that almost final perfection has at last been obtained.



Job Side of Masterman Composing Room Cabinet showing forty-two job cases with gradual projection of top cases, and with plain 18x72 inch bank

Description

The news and job men work on opposite sides. It provides a four-inch extension front feature. The cases are supported on heavy flat steel runs. It has large projecting copy-drawers under the composing cases. The plain bank on the job side can be used independently, or it will take a standard eighteen by seventy-two inch Bettis case. It has detachable upper bracket arms, so that the top cases can be used in low form, dispensing with the cap case and using job cases only. By extending the brackets, pairs of news cases can be used in the usual form. Where job cases are used on the lower part of brackets, it leaves room for storage of leads and slugs. The most distinctive feature is the gradual projection of the case line in the four upper cases in each tier. This allows these upper cases to be withdrawn as they have extension rails. The back compartments are accessible without taking these cases from the racks. Another attractive feature is the mortised label holders with transparent celluloid covers, size three-quarters by six inches.



News Side of Masterman Composing Room Cabinet showing galley board between cases, copy box with drawers, galley bank and foot rail. One end showing news cases in place, the other end with low job case arrangement and lead bank above

Equipment

Forty-two cases in the body of the Cabinet. Two pairs of No. 18 Brackets with detachable upper arms. Two job cases for the top, interchangeable with cases in Cabinet. Two double surface galley boards, thirty-two inches long.

Dimensions

Occupies floor space 24x70 inches. Height, floor to flat top, 44 inches. Clearance underneath for sweeping, 6 inches. Copy-drawer box projection, 11 inches. Size of two copy-drawers, $12^{3}/_{16}$x$22^{1}/_{2}$x$2^{1}/_{2}$ inches inside. Size of galley bank under copy box 9x70 inches. Lead and slug trays, 32 inches long; sloping face 23 picas wide; horizontal face, 14 picas. Sloping galley board between the cases on top, $7^{1}/_{2}$ inches wide. Foot rail, 1 5-16 inches diameter. Rail and supporting brackets polished and blued. Plain dump on job side, 18x72 inches. Label-holder mortises, 1x5 inches.

Weight, crated for shipment, 800 pounds.	

One may easily imagine the beautiful appearance twenty or more Masterman Cabinets finished in Mission style would make, and how handy they would be for the compositors. With them there is a place for everything and everything in its place. If the desire is to have style, combined with practicability, there is nothing better than the Masterman. The work-day hours are shorter than they were and labor and rents are climbing. These conditions make it necessary for printers to study economy as to space and time. In the larger cities these are both prominent factors, and the desire has been to equip with such composing room furniture as will not only save floor space, but also save the employees time in doing their work. With the handy Masterman Composing Room Cabinets these difficulties are greatly overcome.

The American Type Founders Company will be pleased to quote prices on any special furniture that you may require. Its representatives may be called upon at any time to confer with you and offer suggestions that will materially assist you in your work. Unquestionably the American Type Founders Company is the largest dealer in printing office outfits in the world, and there is no other concern so competent to advise you.

Handy Sort Cabinets

The Handy Sort Cabinets are very compact and will hold an immense amount of material within a small floor space. A cabinet of this kind should supplant the various tin can and cigar box arrangements which are to be found in so many printing offices. Such makeshift arrangements are most wasteful of time and material, while Handy Sort Cabinets, when properly equipped, filled and labeled are decidedly economical. The cabinets are made of hardwood throughout and are nicely finished. Drawers are eight and one-half by twenty inches over all and two and one-eighth inches deep inside. Each drawer is divided into ten compartments, each compartment three and one-fourth by three and one-eighth by two and one-eighth inches inside. Brass label holders attached to any cabinet at an addition to the list price of five cents for each holder.

Handy Sort Cabinet No. 3

The Ad-Man's Cabinet

The Ad-Man's Cabinet is designed to meet the requirements of the ad-man who must necessarily have recourse to an abundance and great variety of material. The aim is to place all this material directly before the workman in the most convenient form. The two tiers of cases and other equipment are reversed, both sides of the Cabinet being alike. A two-faced lead and slug bank is supported by uprights over the working top; this bank has adjustable partitions providing separate compartments on each side for leads and slugs. This entire lead and slug bank can be raised or lowered six inches. Four men can work at the Cabinet on straight work without interference, two on each side. The ad-man places his type case at the right hand end of the working top. He will have before him within reach his leads and slugs. At his left on the working top he will place a large dumping galley; his copy drawer will be directly under the working type case; under the copy drawer on the supplementary bank he can place another dumping galley. The illustration shows the Cabinet fully equipped with electric lights, mortised label holders and foot rails, which are listed as extras. The inverted V-shaped lead and slug bank has electric lights arranged inside where the direct rays will not reach the workman's eyes.

No. 28 Tracy Cabinet with forty-eight Standard California Job Cases and two copy drawers

Tracy Cabinets

The popularity of the Tracy Cabinets is amply demonstrated by the fact that large numbers of them have been installed in the leading printing plants throughout this and foreign countries.

Has flat steel runs providing a five-inch extension front. No brackets are required as the solid top serves as a working bank on both sides, or for the accommodation of case equipment. The top is removable and adjustable.

No. 28 Tracy Cabinet is illustrated with forty-eight standard depth California job cases. Has solid, removable, reversible and adjustable top permitting four-inch change in the overhang. Takes eighteen by seventy-two-inch Bettis Case on one side. The news side will take two full size job cases at the front and a nine by seventy-two inch lead and slug case at the back. Two pairs of news cases can be put in place on this side of top when required.

Floor space twenty-eight by seventy and one-half inches. Height at front forty-three and one-quarter inches. Extreme height at top fifty-eight and one-quarter inches. Working bank eighteen by seventy-two inches. Weight, crated for shipment, eight hundred and fifty pounds.

List Prices of Tracy Cabinets

No. 28 Tracy Cabinet with forty-eight Standard California job cases and two copy drawers	$97 00
The No. 29 Tracy Cabinet is the same as No. 28, except for the omission of two copy drawers and supplementary galley bank under copy drawers. Price, with forty-eight Standard California job cases	90 00

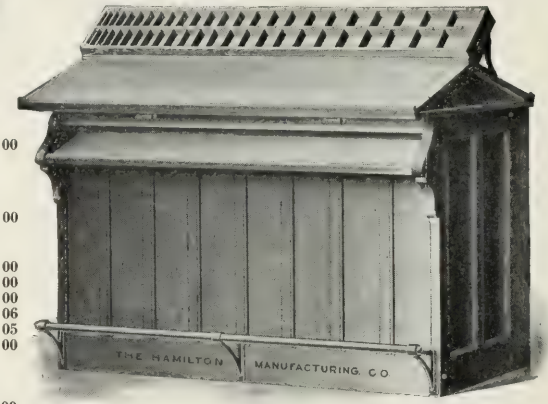
With 34 cases, with 1¹⁷⁄₃₂ inch slats; add list	10 00



Reverse side of No. 28 Tracy Cabinet showing adjustable and removable top

Strip Lead and Rule Cabinet

Strip Lead and Rule Cabinet

A most convenient Cabinet for the storage of full lengths of leads, slugs and brass rule. No device of the kind has heretofore been offered printers, and this little Cabinet will surely find a prominent place. It is thoroughly well made of hardwood, with the ends paneled, finished antique, same as the best of our cabinet work. There are seventeen vertical compartments one inch wide, six inches in height, at the top of the Cabinet, which will take twenty-four-inch lengths of brass rule. Under the rule compartments are twenty vertical compartments thirteen-sixteenths of an inch wide, nine inches in height, which will accommodate twenty-four-inch lengths of leads and slugs. On the right-hand end, underneath the overhanging top is placed a drawer, running full depth of the cabinet and containing two compartments to receive the cuttings from the mitering machine and the lead cutter; the cuttings being dropped into the drawer by means of an opening through the hardwood top into each compartment, one compartment for leads and one for brass. The drawer is removable and can be dumped as required. At the bottom is a large compartment for storing the mitering machine and the lead cutter, when not in use, thus allowing the top to be used for other working purposes. The front of Cabinet is closed by two swinging doors, fastened by lock, which secures the valuable material stored therein under direct care of the foreman or party holding the key.

List Price and Dimensions of Strip Lead and Rule Cabinet

Occupies floor space 22½x26 inches; height, 38 inches. List price $40 00

Prices are subject to prevailing discounts

New Departure Type Cabinets

The New Departure Type Cabinets are constructed of hardwood, finished antique; the ends are tastefully paneled and moulded, and the fronts ornamented and fitted with bronzed pulls. The cases are of our best New Departure pattern. The New Departure Type Cabinets possess all the advantages of other cabinets and have the remarkable feature of combining from twenty-five to thirty-three cases within the height of forty-three inches, which is the correct height for a flat top cabinet with cases and brackets on top for typesetting purposes. This represents a gain of thirty-three and one-third per cent in case capacity over the best steel run construction heretofore offered to printers. These steel runs are thin pieces of steel of great strength, fitted into saw-kerfs cut in the sides of the Cabinet and held in place by means of lips on the ends of the runs, so that such runs cannot possibly get out of place or become loose.

No. 68 New Departure Cabinet with Top Equipment

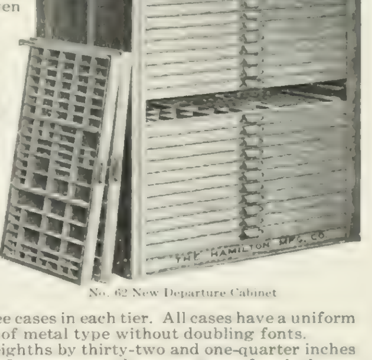
These flat steel runs were originated and perfected more than ten years ago, and have been in continual use in steel run stands since that time. They have given such universal satisfaction that they are now incorporated in this line of Steel Run Cabinets. Owing to the fact that the cost of constructing these Cabinets is somewhat less than the regular steel run construction, the prices on them are somewhat lower than those of other cabinets shown.

Of all the cabinets shown within these pages, the No. 62 New Departure has had the greatest sale of any. Of this particular Cabinet there have been manufactured and sold each year about one thousand. This certainly emphasizes the popularity of the No. 62, which has a single tier and contains twenty-five standard size California job cases of regular depth.

The No. 68, another popular style, has two tiers containing fifty full size job cases. Both the No. 62 and the No. 68 are fairly representative of the whole line of New Departure Cabinets, so it is unnecessary to illustrate them further. All the cabinets are flat top and if galley tops are wanted, there will be an additional charge of **$3.00** for single tier cabinets and **$6.00** for double tier cabinets.

These changes will be made whenever desired, but in ordering it will be necessary to state that such changes are wanted in order to secure them. This is imperative. The illustration above, however, shows the No. 68 New Departure Flat Top Cabinet with a top equipment made up as follows: Two pairs No. 2 Three Case Tilting Brackets, two pairs of News Cases and one No. 8 Bettis Lead and Slug Case. The individual prices of these articles may be found in other parts of this catalogue. The No. 68 New Departure Cabinet is of standard dimensions containing fifty regular full size California Job Cases in two tiers, or twenty-five cases in each tier. This cabinet occupies a floor space twenty-one by sixty-nine and seven-eighths inches, the height is forty-three inches. The top equipment may be selected to suit the customer.

The seven special cabinets described below with a variety of cases, have a uniform height of forty-three inches, which is the correct height for typesetting purposes. These cabinets represent an achievement in type case construction never before attained. Heretofore the most compact cabinets have contained only twenty-five cases in the height of forty-five inches; here we have cabinets containing thirty-three cases all within the height of forty-three inches, and all of the cases deep enough for practical purposes except for the very largest fonts of metal type. In two cabinets, Nos. 64 and 70, containing cases of four different depths, we have a result of twenty-eight cases within forty-three inches, and some of these cases are unusually deep, thus accommodating the very largest sizes of metal type. All of the cabinets in the detailed list, as given below, with the following seven exceptions contain cases of standard depth, one and three-eighths inches outside the front.



No. 62 New Departure Cabinet

No. 51 contains thirty-three two-thirds size cases sixteen and five-eighths by twenty-one and three-quarters inches outside measure. The cases have a uniform depth of one inch outside the front and are deep enough for all medium and small sizes of metal type without doubling fonts.

No. 57 contains thirty-three three-quarter size cases, size sixteen and five-eighths by twenty-six and one-half inches outside measure. The cases have a uniform depth of one inch outside the front and are deep enough for all medium and small sizes of metal type without doubling fonts.

No. 63 contains thirty-three full size cases, size sixteen and five-eighths by thirty-two and one-quarter inches outside measure. The cases have a uniform depth of one inch outside the front and deep enough for all medium and small sizes of metal type without doubling fonts.

No. 64 contains twenty-eight full size cases, size sixteen and five-eighths by thirty-two and one-quarter inches outside measure. These cases are of four different depths; five cases are three-quarters of an inch, ten cases are one inch, ten cases are standard one and three-eighths inches and three cases are extra deep, being one and three-quarters inches, all measured outside the front.

No. 69 is a two-tier cabinet, containing sixty-six full size cases, size sixteen and five-eighths by thirty-two and one-quarter inches outside measure. There are thirty-three cases in each tier. All cases have a uniform depth of one inch outside the front and are deep enough for all medium and small sizes of metal type without doubling fonts.

No. 70 is a two-tier cabinet containing fifty-six full size cases, size sixteen and five-eighths by thirty-two and one-quarter inches outside measure. There are twenty-eight cases in each tier of four different depths; five cases are three-quarters of an inch, ten one inch, ten standard one and three-eighths inches and three one and three-quarters inches, all measured outside the front.

No. 72 contains three tiers of full size cases and represents New Departure Cabinets Nos. 62, 63 and 71 combined. The center tier contains thirty-three cases one inch deep outside, and one tier contains twenty cases one and three-quarters inches deep outside of fronts. A total of seventy-eight cases of the three most convenient depths.

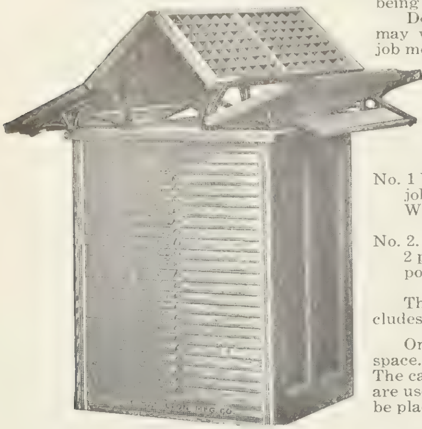
72	78	Three tiers	Full size	$16\frac{5}{8}$x$32\frac{1}{4}$ inches	Special three depths	21x$103\frac{3}{4}$ inches	43 inches	850 pounds	**113 00**

All the above prices and descriptions are for flat top cabinets. If wanted with galley tops add to the price given for single tier cabinets **$3.00**, and for double tier cabinets **$6.00**. Brass label holders attached to a cabinet at an additional price of five cents per case, list.

Add for paneled backs, single tier, **$2.50**; for two tiers, **$4.00**; for three tiers, **$5.50**

Wisconsin Window Cabinet

The Wisconsin Window Cabinet differs from other flat top cabinets in the arrangement of the top, which projects behind seven inches. Two pairs of brackets are placed so as to face the cases to the sides. The top is cleated to prevent the projecting top from being broken. The back is paneled.



No. 2 Wisconsin Window Cabinet

Designed for placing in front of a window, as it does not obstruct the light. Two men may work undisturbed at the sides, while the job cases in front are convenient for the job men.

This Cabinet has the patent Tilting Bracket with galley rest, which enables a compositor to empty his stick without leaving the Cabinet, by simply tilting his lower case, thus exposing the galley board.

Made in ash, with antique finish. Bottom is made flush to floor to prevent dirt from getting underneath Cabinet.

List Prices and Dimensions of Wisconsin Window Cabinets

No. 1 Wisconsin Window Cabinet, with wood runs and filled with 18 full size California job cases, 2 pairs of news cases and 2 pairs of Patent Tilting Brackets No. 1 on top. Weight, 350 pounds. List price **$36 00**

No. 2. With 23 full size California job cases and steel runs, 2 pairs of news cases and 2 pairs of patent Tilting Brackets No. 1 on top, same height as No. 1. Weight, 375 pounds. List price **47 00**

The width is 35¾ inches, height, 43 inches, depth 21½ inches. The weight given includes the cases and brackets on top, all crated, ready for shipment.

One of the great advantages of this Cabinet is that it saves twenty-five per cent in floor space. Each can be utilized for body type composition by attaching case brackets on top. The capacity of the type cases for holding type is not reduced in the least as regular cases are used. The saving of space is attained by using the steel runs, which allow the cases to be placed more compactly in the Cabinet.

Wisconsin Steel Run Cabinets

The Wisconsin Steel Run Cabinets for many years have been considered very moderate priced cabinets. There are today hundreds upon hundreds of them in use throughout the country giving entire satisfaction. To those printers who do not wish to invest in the higher-priced printing office furniture, we have no hesitancy in recommending the Wisconsin Steel Run. While we have illustrated but one of these Cabinets, by referring to the list below, it will be seen that the Wisconsin is made in a great many styles and it should be an easy matter to make a selection of the size best suited to your purpose. If requested, we will supply any additional information required regarding these Cabinets.

The American Type Founders Company is the largest dealer in printing office requisites in the world, and is in a position to give its customers better service than can be obtained elsewhere. We are always ready to give quotations on anything special that may be required. Correspondence is invited on subjects pertaining to the equipment of a printing plant.

There are no better Cabinets made for all around general use than are represented in the Wisconsin Steel Run Cabinets. They are substantially constructed of selected hardwoods, beautifully finished in antique shade of color, and will prove an ornament in any office wherever installed. They represent the maximum of case concentration and are space savers in the fullest sense of the term. All these Cabinets have paneled sides with tastefully moulded edges.

The one, two and three-tier Wisconsin Steel Run Cabinets with flat tops and holding twenty-five cases in each tier, can be utilized for body type composition by attaching case brackets on top. Accommodating twenty-five cases in the space usually taken up by eighteen or twenty cases in the ordinary cabinet or stand, it saves twenty-five per cent in the floor space. The capacity of the type cases for holding type is not reduced in the least, as regular cases are used. The saving in space is attained by using the Steel Runs, which allow the cases to be placed more compactly in the Cabinet.

The proper Brackets to use on the top of a Cabinet forty-four and one-quarter inches in height are as follows:

No. 6, Style A. Double Case Bracket to attach to the edge of the Cabinet. List price, per pair **$1 50**

No. 7, Style B. Double Case Bracket to set on the flat top. List price, per pair **1 25**

Patent Tilting Bracket No. 1. To set on the flat top. List price, per pair . . **2 00**

No. 2. Three-Case Tilting Bracket to set on the flat top—takes 18-inch dump at the back. List price, per pair **2 40**

No. 4. Three-Case Bracket to set on the flat top—takes 18-inch dump at the back. List price, per pair **1 90**

The Wisconsin Cabinets

Wisconsin Cabinets are all substantially made of selected, thoroughly seasoned hardwood, beautifully finished, sides made with double panels, tastefully moulded. Bottoms are made flush with floor to prevent pi from getting underneath. Brackets are made to fit flat top Cabinets. Cases placed with these brackets on twenty-case Cabinets are regular height, forty-three inches from floor for typesetting purposes

Wisconsin Cabinets are made in ash antique finish, this wood being very handsome and of unusual strength, with excellent staying qualities

All Wisconsin Cabinets are fitted with New Departure Cases. These cases slide on the side rails and the bottoms do not come in contact with the case runs.

When ordering by number state clearly whether flat top or galley top Cabinets are wanted

The height of the galley top Cabinets is the same at the front as the flat top Cabinets. The backs of galley top Cabinets are six and three-quarter inches higher than given in the list for flat top Cabinets. All galley top Cabinets are supplied with an extra blank copy drawer at the top. This drawer will be found useful for the storage of copy and small tools used on the working bank of galley top Cabinets. It is also useful for the storage of electrotypes and small tied-up forms.

No. 27 Flat Top 20 Case Wisconsin Cabinet

Brackets for Use on Flat Top Cabinets

To get the full value of a flat top Cabinet of standard height, brackets and cases should be placed on top. See bracket section of this catalogue. The styles of brackets which will work most conveniently with these Cabinets are as follows:

No. 6.	Style A—Double Case Bracket, per pair	$1 50
No. 7.	Style B—Double Case Bracket, per pair	1 25
No. 1.	Hamilton Patent Tilting Bracket, per pair	2 00
No. 2.	Three-Case Tilting Bracket, per pair	2 40
No. 4.	Three-Case Bracket, per pair	1 90

Brass Label Holders attached to the cases in any Cabinet at an addition to the list price of five cents per case.

The City Stands

The upper case projects forward over the lower, bringing it near the compositor, who sets caps with greater ease than from the ordinary stand. Under the lower case there is a shelf to hold the galley, and the lower case may be pushed back (see cut) as far as is necessary to permit emptying type on galley without leaving stand.

The Single City Stands are made to hold fifteen full size cases, and the Double City Stands to hold thirty full size cases.

The City Stands are crated and shipped in knock-down form.

The prices given are for stands only and do not include the cases on top or in the body of the stand. Case pulls to attach to the fronts of the cases in bulk, four cents each, list.

Double City Stand Capacity 30 cases

List Prices and Dimensions of City Stands

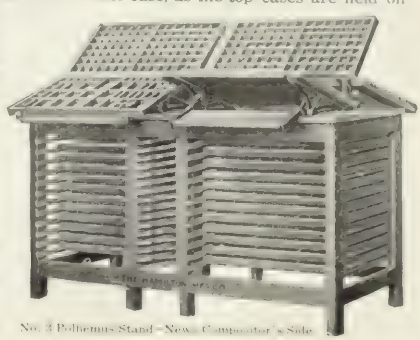
No. 1. Single, with racks for 15 full size cases; weight, 55 pounds; occupies floor space 26x36 inches. List price $5 75

No. 2. Double, with racks for 30 full size cases; weight, 80 pounds; occupies floor space 26x70¼ inches. List price 8 00

The Polhemus Stands

The news compositor stands behind the job cases, where he works without being interrupted by the job men. He can empty his stick without leaving the stand, on a galley kept under the lower case, as the top cases are held on Patent Tilting Brackets. Over the job cases there is a working bank or galley top, for keeping live and dead matter. Between the case racks on the No. 3 stand there is a galley cabinet.

The prices given below include the brackets, but not the cases on the brackets or in the body of the stand. Polhemus Stands are crated and shipped in knock-down form.



No. 3 Polhemus Stand—News Compositor's Side

List Prices and Dimensions of Polhemus Stands

No. 1. Single, with rack for 12 full size cases; weight, with brackets, 100 pounds; occupies floor space 20½x36 inches. List price $ 7 50

No. 2. Double, with racks for 24 full size cases, and no galley cabinet; weight, 180 pounds; occupies floor space 26x70½ inches. List price . . 13 00

No. 3. Double, with racks for 12 full size cases, and 12 two-thirds cases, with galley cabinet; weight, 250 pounds; occupies floor space 26½x71⅜ inches. List price 20 00

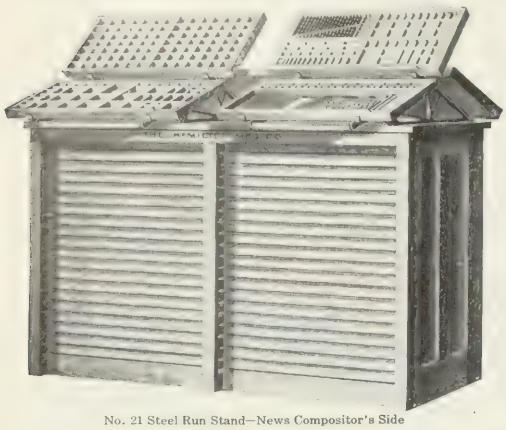
Fly Sticks for Cylinder Presses

In small or large lots. We have special facilities for this class of work, and solicit an opportunity to quote to press builders. We can replace fly sticks on presses in use. List price, a dozen (weight, five pounds) $1 50

Fly Sticks for Cylinder Presses

The Popular Steel Run Stands

No. 21 Steel Run Stand represents the maximum of case capacity. It is strongly made and durable, and will prove economical wherever installed. It is made with flat top and requires case brackets to hold the news cases. The job cases can be put into the racks from either side of the frame, and the steel runs are placed so close together as to require pulls on the fronts of the job cases to get best results. Regular cases can be put into the racks without planing off the fronts.



No. 21 Steel Run Stand—News Compositor's Side

It has capacity for forty cases under the top. Brackets and cases for the top can be selected to meet the requirements. Several kinds of brackets can be used on this stand, as listed below.

The top equipment illustrated is as follows: Two pairs No. 2 three-case tilting brackets, one pair news cases, two blank cases, one thirty inch space and quad case, one No. 8 Bettis lead and slug case, and four quarter cases, as follows: Ideal brass leader case, compact rule case, time-table quarter case, Wisconsin quarter case, Style C.

Occupies floor space twenty-one and one-half by seventy inches. Height from floor to flat top forty-four and one-eighth inches.

The prices given below are for stand only and do not include the cases in the body of the frame or the news cases on the top. Selections of case equipment can be made as requirements demand.

Prices given for brackets in the list below are net and any discount allowed on the Steel Run Stand does not apply on such brackets. Case pulls can be furnished in bulk to attach to the fronts of old cases for four cents each, list.

List Prices of No. 21 Steel Run Stand and Equipment

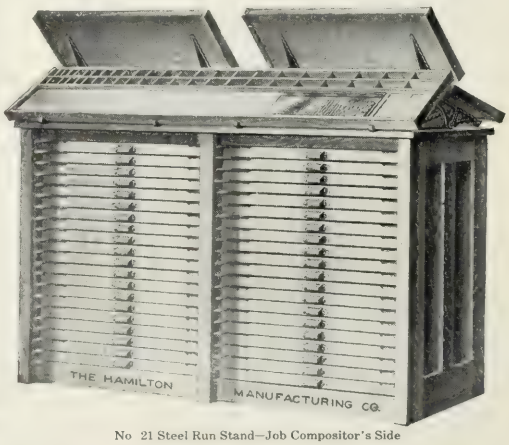
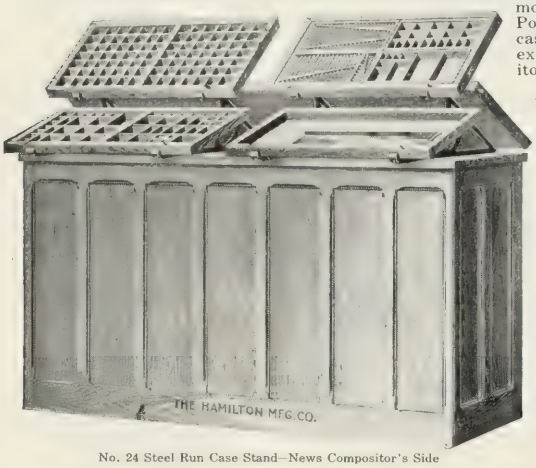
30-inch Space and Quad Case	1¼	75
News Cases, per pair	14	1 60

With the exception of the Case Brackets specified, prevailing discounts apply to this line of Steel Run Stands.



No 21 Steel Run Stand—Job Compositor's Side

This excellent piece of cabinet work, Steel Run Stand No. 24, when fully equipped with New Departure Cases, represents the acme of Steel Run Stand construction, and the most advanced type of composing room equipment. The ends are paneled with neatly moulded edges. The back has seven panels with chamfered edges like a Polhemus Cabinet. The front rail is set back several inches, and the job cases, when in place set back several inches from the front, providing an extension front feature. This allows plenty of knee room for the compositor.



No. 24 Steel Run Case Stand—News Compositor's Side

Constructed of hardwood throughout, with all exterior surfaces nicely varnished like the best of cabinets. The runs are of flat steel, capable of sustaining great weight.

This equipment, as illustrated, places the job compositor and the news compositor on opposite sides, so that there will be no interference.

The top equipment illustrated is as follows: Two pairs of No. 4 three-case brackets; one pair of news cases; two blank cases; one No. 8 Bettis lead and slug case, and four quarter-size cases as follows: One Perfection rule case, one Compact rule case, one All-right space and quad case, one Wisconsin quarter case, Style D. Under the top there are steel runs to accommodate forty full size cases.

The No. 8 Bettis lead and slug case is seventy-two inches long and has an eleven-inch blank space at the front to be used as a working dump. This space will take a ten by twenty-four inch galley. The compartments for leads and slugs in this case are one and one-half inches deep and for lengths from four to twenty-eight picas, varying by single picas, omitting the twenty-seven em length.

Occupies floor space twenty-two and one-half by seventy inches. Height, from floor to flat top forty-four and one-eighth inches.

The prices given below are for stand only and do not include the cases in the body of the stand or the news cases on the top. Selection of case equipment can be made as requirements demand.

Prices given for brackets in the list are net, and any discount allowed on the Steel Run Stand does not apply on such brackets.

Case pulls can be furnished in bulk to attach to the fronts of old cases at four cents each, list.

No. 24 Steel Run Case Stand—Job Compositor's Side

The Popular Steel Run Stands

Modern Steel Run Stands place the job compositor and the news compositor on opposite sides, thus preventing all interference Four men can work at the No. 22 Steel Run Stand continuously, and the saving in time will quickly pay for its cost. It is made of hardwood throughout, very strongly bolted, and the Steel Runs are New Departure style, let into saw kerfs and held in place by means of lips at the ends, which interlock with wooden strips. There are no nails or screws to become loose. The stand is practically indestructible, and will give lasting service.

The No. 22 Steel Run Stand requires no brackets, as it is built with a top to hold news cases. The job cases are put in from the back. There is ample knee room for the news compositor, as the cases do not come to a line at the front of the stand, but set back about five inches. The blank space between the two pairs of news cases will serve as a galley board and type matter can be placed in this space to advantage. It will also serve admirably as a lead and slug bank. Regular full size lip cases can be used and there is ample finger room between cases, so that pulls are not required. However, the withdrawing of the job cases is facilitated by attaching pulls to the case fronts.

Occupies floor space twenty-six by seventy inches. Height at front forty-four and three-quarters inches.

The prices given below are for the stand only and do not include the cases in the body of the frame or the news cases on top. Selection of case equipment can be made as requirements demand.

Case pulls can be furnished in bulk to attach to the fronts of old cases for four cents each, list.

List Prices of No. 22 Steel Run Stand

Capacity, Thirty-two Full Size Cases	Weight Pounds	Price

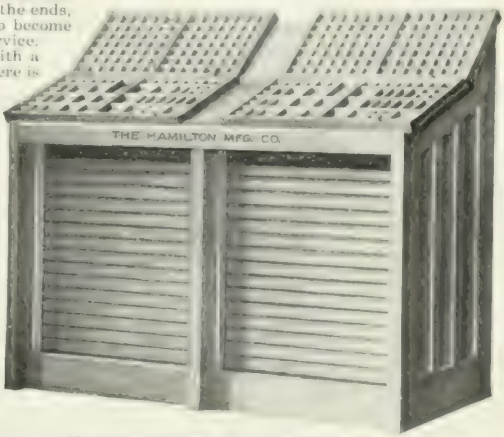
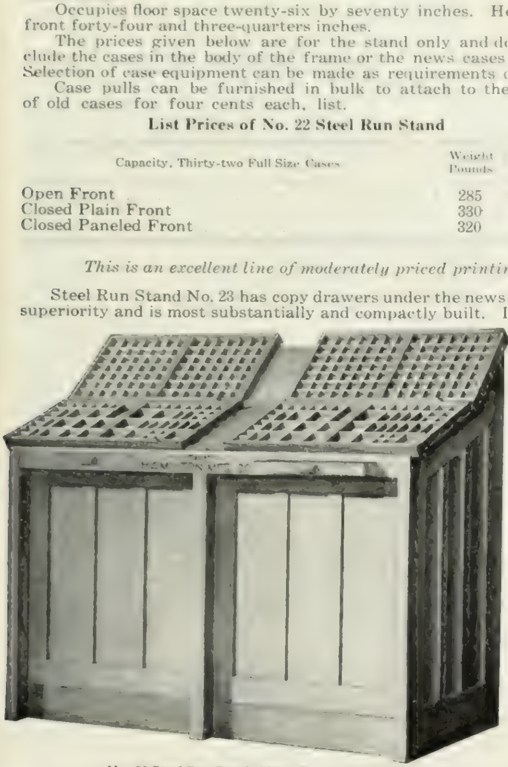
Closed Plain Front	330	28 50
Closed Paneled Front	320	30 00



No. 22 Steel Run Stand. Front View, showing News Cases Job Cases pull from the Rear

This is an excellent line of moderately priced printing office furniture as many satisfied customers will testify.

Steel Run Stand No. 23 has copy drawers under the news cases, and full length dump over the job cases. It also has other points of superiority and is most substantially and compactly built. It will give service for an indefinite period, and will prove ornamental as well as useful in any composing room. This stand is made with paneled front or with closed plain front. The news compositors and the job compositors are placed on opposite sides and there will be no interference. Four men can work continuously at the same stand, two on each side. Made of selected hardwood and finished like the best grades of cabinets. The runs are of flat steel, New Departure style, let into saw kerfs and held by lips, which interlock with wooden strips. These modern Steel Run Stands when filled with cases and fully equipped compare in every respect with the best of cabinets. The No. 23 Stand will take thirty-two full size lip cases arranged in two tiers, sixteen cases in each tier.



No. 23 Steel Run Stand—News Compositor's Side

It requires no case brackets, as it is built with a top to hold news cases. The job cases are put in from the back, as the illustration shows. There is ample knee room at the side for the news compositors, as the cases do not come to a line at the front of the stand, but set back about five inches as shown. The blank space between the two pairs of news cases will serve as a galley board and type matter can be placed in this space to advantage. It will also serve admirably as a lead and slug bank. Regular full size lip cases can be used in all of these stands, and there will be ample finger room between cases, so that pulls will not be required. However, the withdrawing of the job cases will be facilitated by attaching pulls to the case fronts. Occupies floor space twenty-six by seventy inches. Height at front, forty-four and three-quarters inches.

The prices below are for the stand only and do not include the cases in the body of the cabinet or the news cases on top. Selection of case equipment can be made as requirements demand.

Case pulls can be furnished in bulk to attach to the fronts of old cases at four cents each, list.

No. 23 Steel Run Stand, Showing Full Length Galley Dump

Ruling Pen Cabinet

Ruling Pen Cabinet for Paper Rulers and Blank Book Makers

This is a convenient cabinet, which it has hitherto been difficult to obtain, except when made to order. It is a necessity in every bookbindery for the systematic storage of ruling pens.

Made of ash, finished antique, with three-ply veneer bottoms, which cannot crack or shrink, making a first-class piece of work in every respect. Each drawer has six compartments, three of the compartments being eight and one-quarter by two and three-quarters inches, and three compartments, five and one-half by two and three-quarters inches deep, inside measurements.

Every establishment doing paper ruling or blank book manufacturing should have one of these handy Cabinets. It often happens that its cost is saved in a very few months, for employees all appreciate a convenience which will permit of a systematic way of storing ruling pens and requisites. Add one of these Cabinets to your plant and note the improvement in shop conditions.

List Prices and Dimensions of Ruling Pen Cabinets

No.	Height Inches	Depth Inches	Width Inches	Weight Pounds	No. of Drawers	Price
1	13⅞	13¼	17	70	4	$12 00
2	19¾	13¼	17	100	6	14 00

Other sizes can be made to order at proportionate prices.

Tracy Steel Run Stands

Economy in composing room equipment and cleanliness are combined in these stands. They comprise the latest development in steel run stand construction. No dust can accumulate under the cases on these stands, and there is no waste space.

Job side Nos. 26 and 27 Tracy Steel Run Stands, with forty lip front California job cases in place. (The bank can be used independently, or with an 18x72 inch Bettis lead and slug case)

Flat steel runs of extra thickness and extra width are used to hold the job cases, with five-inch extension fronts when cases are pushed back in position. This permits the withdrawal of any case, which can be placed in any desired position in front of another case without withdrawing it, a most valuable and economic feature.

The News Side No. 27 Tracy Steel Run Stand, with copy drawers and galley bank under the news cases

Brackets have been disregarded, thus providing a solid board top, one side of which can be used as a working bank, or it will take a full length Bettis lead and slug case, eighteen inches wide. On the other side can be placed a pair of job cases on the lower section, and the upper board used as a galley bank or a lead and slug bank, or two pairs of news cases can be placed in the usual way. There are forty California job cases in the body of the Cabinet, taking twenty standard, full size, lip front cases in each tier. Under the news case bank there is an additional bank for the storage of galleys containing type matter.

This bank is nine inches wide and extends the full length of the Cabinet. Immediately over this bank are two copy drawers ten and three-quarters by thirty-one inches inside. The tops are removable and adjustable, thus allowing a movement of four inches to control the overhang, which can be thrown to either side of the stand to the extent of four inches.

The News Side No. 26 Tracy Steel Run Composing Room Stand

No brackets are required with these stands. They are perfectly rigid and guaranteed to remain so. They are made of selected hardwood, filled, stained and varnished.

List Prices and Dimensions of Tracy Steel Run Stands

No. 27 Tracy Steel Run Stand. Occupies floor space 28x70½ inches. Height at front 43¼ inches. Total height from floor to extreme top, when cap cases are not used, 57 inches, thus allowing a clear view of the composing room with no obstruction. Weight, crated for shipment, 440 pounds. List price, without cases . . . **$42 00**

No. 26 Tracy Steel Run Stand. Same as No. 27, described above, except for the omission of the two copy drawers under the news case bank, and also omitting the special 9-inch bank under the two copy drawers. Weight, crated for shipment, 400 pounds. List price, without cases . . . **35 00**

List price of Tracy Stand Tops only . . . **12 50**

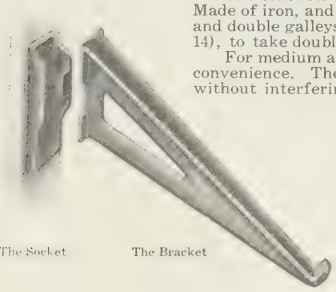
Tracy Steel Run Stands have proven very popular with many of the larger printers of this country. There are several composing rooms entirely equipped with them. The one great advantage of the Tracy Steel Run Stands is the fact that when the cap cases are not used the extreme height of the stand is but fifty-seven inches, allowing a clear view of the entire composing room.

Galley Racks

These Galley Racks and Galley Brackets are the most substantial brackets made and are in general use in thousands of printing offices throughout the world.

The brackets are held on a stout hardwood frame, and braced as shown in cut. Made of iron, and held in sockets which are firmly screwed to the frame; take single and double galleys. The prices quoted below are for Racks with 8-inch arms (No. 14), to take double column galleys,

For medium and small composing rooms these Galley Racks will be found a great convenience. There is always a blank wall space where the rack may be attached without interfering with the workmen.



List Prices of Brackets and Sockets

LENGTHS	Price Per Pair: Weight Pounds	No. 14 Inclined	No. 15 Reversible
8-inch Arms	2½	$0 40	$0 40
10-inch Arms	4	75	75
12-inch Arms	7	1 25	1 25

List Prices and Dimensions of Galley Racks

	Dimensions of Frame Inches	Weight, Complete Pounds	Price
For 6 Galleys	1½x14 7/16x31	22	$ 3 00
For 8 Galleys	1½x14 7/16x38	27	4 00

New York Double and Quadruple Stands

The New York Case Stands were designed to economize floor space, they give the greatest case capacity to least area. The lower case projects into the alley several inches, affording the compositor ample knee room. The angle of the lower case is just right for rapid setting.

No. 2 New York Double Case Stand

The cap case is raised above the lower and brought forward closer to the compositor's hand, while not obstructing the figure boxes of the lower case.

The cases are held on strong iron brackets, securely screwed to a hardwood top, which is very useful for storing tied-up matter. The utility of the No. 2 Double Stand can be increased by substituting three case brackets.

A double stand holds thirty cases and two pairs of news cases on top. A quadruple stand holds sixty cases and four pairs of news cases on top. Prices given below include the brackets, but not the case on top.

These stands have been in use in some of the best printing offices for many years and have been found entirely satisfactory in every way.

No. 3 New York Quadruple Case Stand

List Prices and Dimensions of New York Double and Quadruple Stands

No.	Description	Capacity	Floor space Inches	Weight with Brackets	Price
1	New York Single Stand	15 Cases and 1 pair on top	18x36⅛	75 pounds	$ 6 50
2	New York Double Stand	30 Cases and 2 pairs on top	18x70½	135 pounds	10 50
3	New York Quadruple Stand	60 Cases and 4 pairs on top	35x70½	225 pounds	18 00
4	New York Window Stand	30 Cases and 2 pairs on top	35x36⅛	135 pounds	10 50

Case Stands and Racks

These Case Stands and Racks are all made of hardwood, and bolted together firmly. The high case racks are braced at the center with bolted rods to prevent spreading, and both stands and racks will remain rigid after long and steady use. To equip a printing plant with these case stands probably requires the very least investment, and when price is an object and must be considered, in preference to style, they will prove to be satisfactory in every way. As a matter of fact a very serviceable office equipment may be purchased with a very small pecuniary outlay. For offices located in districts where space is not of vital importance, these case stands and racks are just as satisfactory as higher priced steel run case stands. They are shipped to purchasers in the natural wood and in a knocked down condition. When assembled, and if it is desired to improve their appearance, they may be covered with a coat of shellac and then varnished. This may be done at a cost of only a few dimes and almost anyone who can use a brush can apply the shellac and afterwards the varnish to the stands. The varnish will add a lustre and brighten the woodwork considerably.

No. 15 Double Stand, with Galley Rest and Racks for 24 full size Cases

As will be observed, there is a large assortment of Case Stands and Racks listed, both in single and double tiers, fitted for cases of various sizes. Should you, however, not find in the list exactly what you require, the American Type Founders Company invites you to correspond on the subject. Its vast experience and intimate knowledge on all matters pertaining to the printing craft and the proper equipment of printing offices is always at your service. As the largest dealer in all requisites for the printer, the American Type Founders Company is in a position to render to its customers better service than can be obtained from any other supply house. The convenient location of the many selling houses of the American Type Founders Company gives it a great advantage in filling orders promptly. No matter where the customers are located this company has a selling house nearby that will give all business prompt and careful attention.

No. 25 Thirty-Case Rack

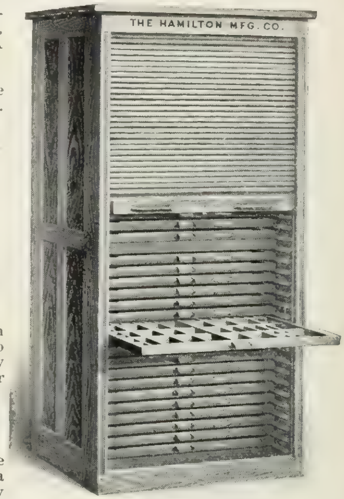
All Case Stands and Racks are furnished unfinished and shipped knockdown

Roll Front Case Racks

Many printers have desired to do away with the ordinary case racks and substitute cabinets, and thus increase the life of the type by keeping it free from dust. On account of the expense involved and the fact that their old cases could not be sold or utilized, they have hesitated in making the needed improvement. This new Case Rack solves the problem. The Roll Front Case Racks are equal to cabinets in every way, and they really are cabinets and not case racks in the ordinary sense of the term. They are fitted with steel runs, and are thoroughly well built. The roll front is fitted with the finest brass desk lock. A single lock secures the entire tier of cases.

Made of ash, finished in antique, same as regular high-grade cabinets.

The prices are for Case Racks only and do not include the cases. These Racks can be made to fit special cases. Case pulls, attached to case fronts, 5 cents each; in bulk, 4 cents each.



No. 5 Roll Front Case Rack

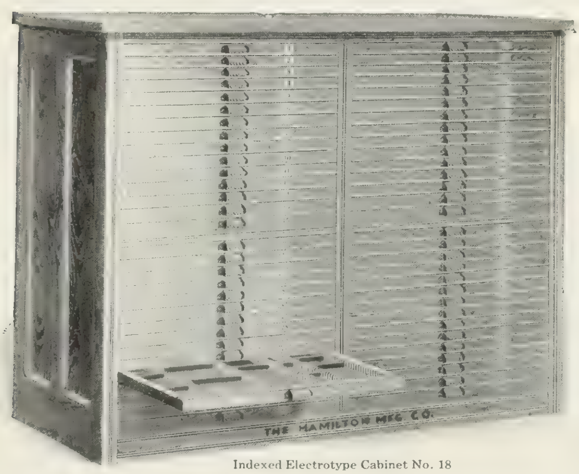
"Everything for the printer" is a slogan which has the earmarks of accuracy when applied to the American Type Founders Company. Its aim is always, not only to keep abreast of the times, but to aid its customers in every way by bringing to their notice every new device or machine which will aid the development of the printing art. Write us your requirements. Our service and experience are at your disposal.

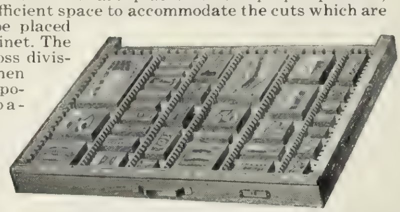
Indexed Electrotype Cabinet

A practical Indexed Electrotype Cabinet is here offered in the Indexed Electrotype Cabinet No. 18. The question of the proper filing of the original cuts and electrotypes is a vital one in houses where the assortment is large. A large amount of money is usually tied up in them and it is economy to place them in a cabinet where they will be preserved and protected from injury, and where they can be found when wanted. The use of the Indexed Electrotype Cabinet absolutely prevents any cut from being lost or mislaid, and but a moment is required to find any original cut or electrotype. When in use the Cabinet is so arranged that each cut or electrotype has a place specially partitioned off for its accommodation. The space is laid out in the right size to accommodate the cut, and there is no waste of room. It is properly recorded in the Index Book, which accompanies each Cabinet.



Indexed Electrotype Cabinet No. 18

To find a cut, a glance at the Index Book will show its exact location, giving the number of the drawer in which it is located, also the section of the drawer and the division of the section as shown in the illustration. When an original cut is withdrawn from the Cabinet for the purpose of having electrotypes cast from it, a record is made in the Index Book, giving the date of its withdrawal and where it was sent, thus maintaining a constant control of each cut. The method of laying out the drawers is shown in the illustration below. The drawers are slotted on the inside, all around on the front, sides and back at intervals of three-eighths of an inch. The full-length divisions, which run from front to back, are also slotted at intervals of three-eighths of an inch on both sides. These full-length divisions are placed in the proper position, leaving sufficient space to accommodate the cuts which are about to be placed in the Cabinet. The smaller cross divisions are then placed in position separating each cut and making a distinct compartment to fit each cut. As soon as cuts are properly laid, a record should be entered in the Index Book. Full details as to indexing are furnished elsewhere.



Indexed Electrotype Drawer. This cut shows a drawer as it appears when divided off and filled with cuts or electrotypes. Note that every cut is in a distinct compartment, and that the dimensions are arranged in both directions to fit various sizes of cuts.

Points of Superiority. These Cabinets, with steel runs, allow the drawers to be placed compactly in the Cabinet and afford a saving in space occupied of twenty-five per cent. Each drawer is also fitted with a metal number plate, and the Index Book accompanies each Cabinet without extra charge. The Cabinets are made of ash, finished in antique oak, and will give thorough satisfaction. They are constructed in three sizes like regular type cabinets. The two-third size drawer is fifteen and one-eighth by twenty and one-half inches inside; the three-quarter drawer is fifteen by twenty-four and five-eighths inches inside; the full-size drawer is fifteen by thirty and one-half inches inside. All drawers have extension side rails at the back, enabling a drawer to be fully drawn and making the cuts in the back readily accessible. The prices given are for the Cabinets, fully equipped, ready for use. All drawers are of the favorably-known pattern, "New Departure."

List Prices and Dimensions of Indexed Electrotype Cabinets

The Fifty Drawer and Sixty Drawer Cabinets are furnished in one or two tiers, as desired, at the same price.

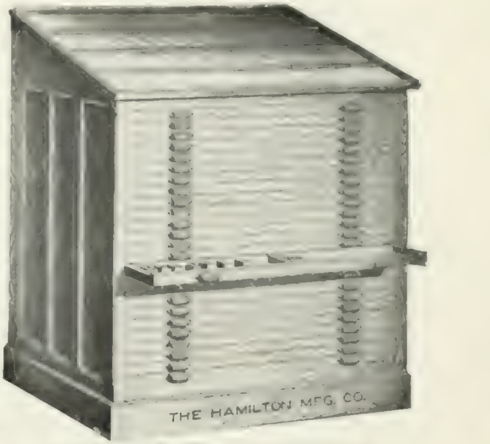
Special Notice. The above prices include the Cabinets fitted with a full equipment of division slats, including five of the slotted divisions for each drawer in the two-third size Cabinets, and six for each drawer in the three-quarter and full-size Cabinets; also with a large assortment of cross divisions, in various lengths. Extra slotted division strips 5 cents each, list. Each drawer is fitted with a metal number plate, as shown in the illustration.

One Indexed Book is furnished for each Cabinet, regardless of the size of the Cabinet. Additional Books, if required will be furnished for $1.00 each, list. Write for discounts.

Wood Type Cabinets

Our Wood Type Cabinets are fitted with either wood or steel runs and equipped with New Departure Cases. In these Cabinets the type is preserved and kept free from dust and at the same time every letter is available without disturbing others.

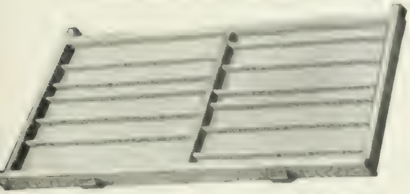
The No. 9 Cabinet shown here occupies but nine square feet of floor space and affords one hundred and forty square feet of case surface for the systematic storage of wood type.



No. 9 Mammoth Wood Type Cabinet with Galley Top

Wood Type Cabinets are made to hold two sizes of cases, viz.: Nos. 1, 2, 3, 7 and 8, to hold cases twenty-three by thirty-two and one-quarter inches and known as the regular Wood Type Cabinet, while Nos. 4, 5, 6, 9 and 10 are made to hold cases twenty-three by forty-four inches, and this size is known as the Mammoth Wood Type Cabinet. They are very substantially constructed of ash, finished in antique oak. The cases are slotted on the sides and have movable strips which may be adjusted to picas. The cases in the Mammoth size (twenty-three by forty-four) have a center bar, as shown in the illustration, while the cases in the regular cases have no center bar.

To meet the demand for Cabinets of greater storage capacity, there are four new sizes, represented by Nos. 7, 8, 9 and 10. These Cabinets are made with steel runs and have twenty-five cases in each tier, but occupy the same floor space and are the same height as Cabinets with wood runs holding twenty cases in each tier. This represents a gain in floor space of twenty-five per cent, an item of interest where space is limited and rents are high.



Style No. 3 Wood Type Case used in Nos. 4, 5, 6, 9 and 10 Cabinets, Size 23x44 inches

Wood Type Cases for Wood Type Cabinets. All cases having movable strips are adjustable by picas. The strips are also cut by even picas so that the variations are by single picas. For instance, a whole case can be adjusted to hold five line type or six line or eight line as desired, or part of each in the same case. The No. 2 Wood Type Case has no center bar, while the No. 3 Case is fitted with a center bar to add strength and to sustain the heavy load which will be carried when cases are filled. The sides and center bars of Wood Type Cases are slotted for pica adjustment. Each case in every Wood Type Cabinet is fitted with a suitable number of division strips without extra charge.

IMPORTANT. Each Wood Type Cabinet is listed with flat top or with galley top under the same number. Customers should not fail to specify clearly which is wanted.

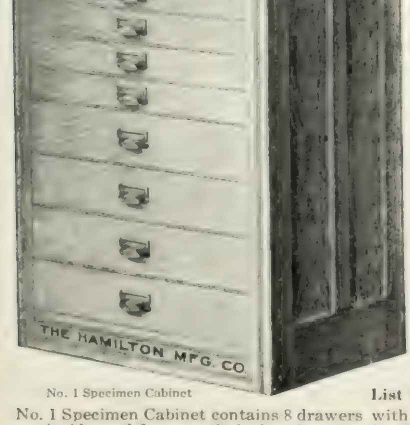
Specimen Cabinets for Particular Printers



No. 1 Specimen Cabinet

The proper classification and preservation of specimens of printing will enable the printer to show his work to prospective customers to the best advantage. There is a large line of specimen cabinets, which include a variety of sizes, forms and prices in order to meet the requirements of large and small printing offices. The Cabinets contain a large number of shallow drawers, which can be labeled and properly indexed. By this method the specimens of printing are not unduly bunched and are easy of access and convenient for display. The Cabinets can be used for other purposes than the storage of specimens of printing. Samples of stock, small supplies, blanks, legal papers and periodicals can be systematically stored.

We can furnish any style of cabinet and shall be pleased to give you information regarding the complete line. Every printing office should have a specimen cabinet of some kind. The American Type Founders Company handles a large variety and they range in prices and finish from the No. 1 shown in the illustration at **$22.00** list, up to the beautiful Specimen Cabinet No. 3 at **$120.00**. This Cabinet is conveniently arranged with a large number of shallow drawers accommodating almost any size of printed matter. The successful printer will not be slow to acknowledge the usefulness of the Specimen Cabinet. Realize for a moment how a much better impression is created in a customer's mind, when you go to a neat cabinet for samples of your work, when you wish to exhibit them to a prospective buyer of printing. In any other line of business neatness in the display of merchandise counts as an important factor. Why should not the same hold good in the case of the printer, especially when the desired result can be obtained at such a small expenditure?

In addition to these Specimen Cabinets, neatly framed samples of your best efforts in printing displayed in prominent positions on the walls of your office are very effective and may assist materially in interesting prospective customers who may visit your establishment.

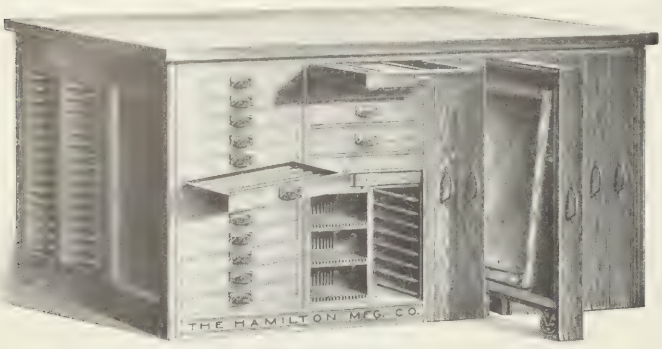
List Price and Dimensions of No. 1 Specimen Cabinet

No. 1 Specimen Cabinet contains 8 drawers with inside dimensions 15⅞x20 inches. Four of these drawers are 2 inches deep, inside, and four are 4½ inches deep, inside. This Cabinet occupies floor space 20¾ inches deep, by 25⅜ inches wide. The height is 37½ inches. The Cabinet is made of ash and is nicely finished. Each drawer is divided into nine compartments, with removable partitions. Weight, crated for shipment, 165 pounds. List price $22 00

Prices quoted on this page are subject to prevailing discounts

Linotype Magazine Cabinet

The advent and adoption of machine composition, especially in newspaper and book offices, has necessitated the introduction of a special line of furniture particularly adapted to this class of work. The Linotype Magazine Cabinet has met with much favor, and will be found a labor saving and convenient addition to the equipment of the machine office.



Linotype Magazine Cabinet

Description

It has a working top thirty-eight inches high. It provides a place for all parts and accessories of the Linotype outfit, including the heavy magazines. The storing of these expensive parts is essential and is well provided for in the large vertical drawers, which are always accessible. Built of hardwood throughout, substantially constructed and nicely finished in antique or any other desired shade. The back is paneled and well finished.

Equipment

MATRIX DRAWERS. In one tier are twelve matrix drawers with shelving bottoms sixteen inches wide, each drawer containing eight grooves or shelves, providing one hundred and twenty-eight inches of storage room in each drawer, or one hundred and twenty-eight running feet in the twelve drawers. The drawers are on an incline, thus keeping the matrices always on edge.

LINER DRAWERS. At the top of the middle tier are two liner drawers, size sixteen by twenty-eight and one-half inches inside. These are partitioned to accommodate all sizes of liners. Cleats engage the slots in the liners and hold them in position.

BLANK DRAWERS. Beneath the liner drawers are two blank drawers, size inside twelve and one-half by sixteen inches and two and three-quarter inches deep. On the end is located another blank drawer, size sixteen and three-quarters by twenty-two and one-half by two and one-half inches. These drawers will accommodate tools and other accessories.

EJECTOR BLADE RACKS. In the center tier at the bottom, enclosed by a roll front secured with lock, are three shelves for ejector blades. Each shelf will hold seventeen blades; any size blade is held in proper position.

SORTS TRAY RACK. At the side of the ejector blade rack is another compartment, secured by a lock, fitted with flat steel runs. This will accommodate eight standard size sort trays.

MAGAZINE DRAWERS. There are eight upright drawers with wheel bearings made to accommodate the No. 5 model magazine. They are held on brackets engaging the lugs on the side of the magazine. If No. 3 magazines are to be accommodated they require deeper drawers, and this size cabinet will hold five of them. In ordering state what magazine it is desired to accommodate.

GALLEY RACKS. These are arranged in double tier, fourteen shelves to each tier. Will accommodate twenty-eight standard double column galleys eight by twenty-four inches.

CUPBOARD. On the opposite side is a cupboard with door, fitted with two adjustable shelves. Size twelve and one-half by nineteen and one-quarter inches by twenty-three and one-half inches inside.

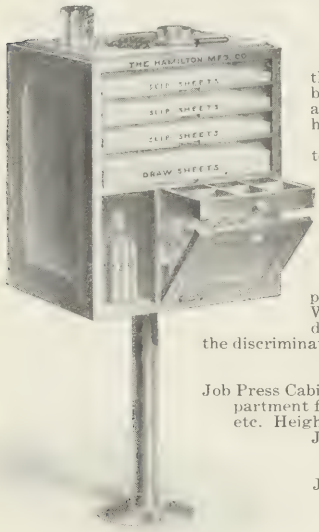
WORKING TOP. This top is of hardwood, one and one-half inches deep, cleated on the ends. Size thirty-seven by seventy-six inches.

The American Type Founders Company will be pleased to quote prices and submit sketches on any special cabinets required. We are in a position to offer you suggestions in your equipment which will save you time and money.

List Price, Dimensions and Weight of Linotype Magazine Cabinet

Occupies floor space, 35 x 74 inches; height, 38 inches; weight, crated, 1,000 pounds. List price **$160 00**
Special magazine cabinets of any desired size can be made to order. Drawings and prices furnished on request.

Job Press Cabinets



Job Press Cabinet

A pressman's time can be saved and economy effected in waste of stock by the use of this Cabinet. It affords a suitable receptacle for tympan paper, gauge pins and other tools, benzine can and wiping rags. One cabinet will serve two presses when placed in the center, a little back of the pressmen. Where space is available the best results are obtained by having a cabinet for each press.

Each unit is mounted on an iron pedestal of convenient working height and on the top is a plate-glass mixing slab. There is a special compartment for the benzine can and to avoid the danger of spontaneous combustion, the compartment for oily rags is metal-lined. The usual gauge pin drawer is provided.

There is one compartment for hard press board, cardboard and filler stock, in various grades for use as draw sheets, also three compartments for slip sheets.

The Cabinets are made in three sizes, for eight by twelve, ten by fifteen and fourteen and one-half by twenty-two inch presses. Intermediate sizes may be accommodated in the next size larger.

As there is undoubtedly a desire on the part of many printers to improve conditions in the pressroom we have listed here a very serviceable and up-to-date cabinet for the pressman. While to some the investment in an article of this nature may seem unnecessary, yet undoubtedly the time is not far distant when such improvements will be eagerly sought for by the discriminating and progressive printing office proprietor.

List Prices and Dimensions of Job Press Cabinets

Job Press Cabinet No. 1. Contains three compartments for slip sheets, 14½x8 inches inside; one compartment for draw sheets, 14½x11 inches; metal-lined compartment for rags, gauge pin drawer, etc. Height, 42 inches; weight, complete, 90 pounds. Complete, with plate glass top. Price . . . **$15 00**

Job Press Cabinet No. 2. Contains three compartments for slip sheets, 17½x10½ inches inside; one compartment for draw sheets 17½x13 inches inside; metal-lined compartment plate-glass top, etc. Height, 42 inches; weight, complete, 110 pounds. Price **18 00**

Linotype Matrix Cabinets

This Cabinet provides a convenient and safe receptacle for the storage of the valuable matrices, space bands and tools which accompany every linotype outfit. The construction is based on a careful study of the requirements of and after the suggestions of practical linotype experts. No linotype outfit is complete without one. This is the only practical cabinet ever made for holding the matrices, space bands and the small tools which accompany a linotype typesetting machine. They are firmly and substantially constructed of hardwood, nicely finished. The roll curtain front will effectually exclude the dust, and being provided with a first-class lock insures the contents of the drawer from being tampered with.

Eight Drawer Linotype Matrix Cabinet
Suitable for an office running two to four machines. Height, 36¼ inches, width, 18 inches; depth, 20¾ inches

The use of these cabinets enables the linotype operator to separate his matrices, space bands and small tools, keeping each in separate compartments. There can be little wear and no damage under this arrangement. The roll curtain front is canvas-backed, and can be removed from the cabinet by lifting off the top. It is smooth-running and easy to manipulate.

Each drawer is fourteen and one-quarter by fifteen inches inside, having ten grooves upon which the matrices are placed edgewise as illustrated here. The capacity of each drawer is one hundred and forty-two running inches of matrices set edgewise. These drawers are set in the cabinet on an incline. This position of the drawers prevents the matrices from falling down or becoming disarranged when the grooves are not full. The illustration shows the matrices in place, the unfilled lines being held by metal slugs.

Six metal slugs are furnished with each drawer in all these cabinets. These will be found very useful—holding up the ends of lines of matrices and also for separating special characters not always required. These slugs are made the same shape and size of matrix and three-quarters of an inch wide.

List Prices and Dimensions of Matrix Cabinets for Linotype Machines

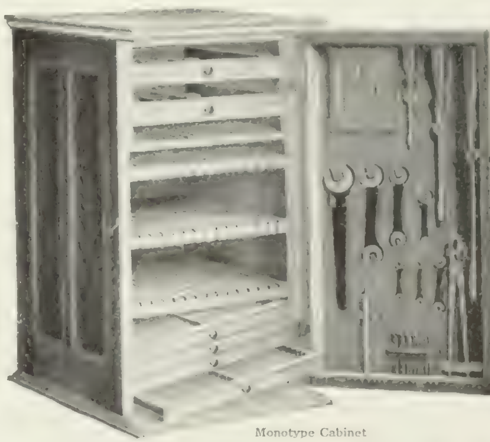
No.	Capacity	Tool Drawer	Height	Width	Depth	Weight	Price
1	6 Drawers—for 1 or 2 machines	1	30¾ in.	18 in.	20¾ in.	150 lbs.	$22 00
2	8 Drawers—for 2 to 4 machines	1	36¼ in.	18 in.	20¾ in.	175 lbs.	28 00
3	10 Drawers—for 4 to 6 machines	1	40¼ in.	18 in.	20¾ in.	200 lbs.	34 00
4	12 Drawers—for 6 to 8 machines	1	45¼ in.	18 in.	20¾ in.	225 lbs.	40 00

Special Cabinets of this pattern built to order. Prices and drawings furnished on receipt of specifications.

Monotype Cabinet

This Cabinet has been designed to embody the ideas of monotype users and operators for a safe and convenient place for holding all accessories to the monotype casting machine when not in use. The door is arranged with holders for the various wrenches, screw-drivers and gauges furnished with the machine so that the Cabinet gives the operator a place for safely and neatly keeping all appliances and tools.

The molds are kept in two sliding trays at the top of the Cabinet; each holds six molds in such a manner that it is impossible for them to strike. Beneath these trays are two shelves for normal wedges; each shelf holds fifteen wedges, and each wedge has its particular place, where it is protected from injury and where it may be quickly found. Two additional shelves provide for twenty-eight matrix cases; each case being held on edge and prevented from striking the other cases. Beneath these shelves are four drawers for individual matrices; each drawer is divided into thirty-seven grooves, in which the matrices are stood on end. A bar across the center of each drawer divides it so that matrices taken from the matrix case, in making changes, are put above the bar in the same groove from which the matrices below the bar are taken to replace those removed from the matrix case. This simple and convenient arrangement reduces the time of the change to a minimum, and avoids mistakes.



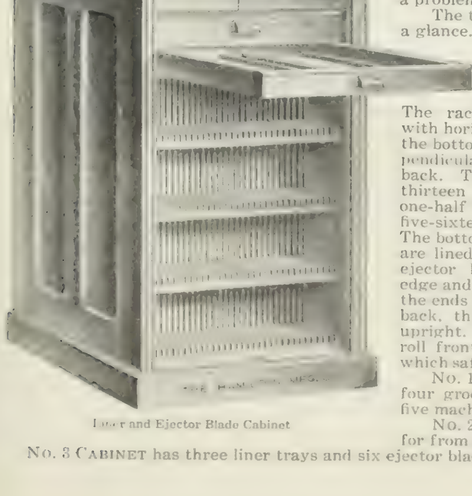
Monotype Cabinet

List Price and Dimensions of Monotype Cabinet

Height, 25½ inches; width, 14 inches; depth, 16 inches; weight, ready for shipment, 75 pounds.
List price $22 00

Monotype Correcting Case

This Case was designed to save floor space and time in correcting monotype matter. Ordinarily the corrector occupies a full size stand, resting the galley on one lower case and taking the sorts required from the other. In the Monotype Correcting Case a place is provided for the galley itself so that the corrector occupies but half the space formerly used and the distance his hand has to travel to reach any lower case character, space, figure or point is reduced to the minimum. List price, each $2 00



Liner and Ejector Blade Cabinet

Liner and Ejector Blade Cabinet

This Cabinet has been designed to hold those essential parts of a Linotype machine—the liners and ejector blades. How to take care of the latter has been a problem for years.

The trays for the liners are so arranged that each liner can readily be seen at a glance. The rails in the trays are so adjusted that the short liners come opposite the longer ones, thus every inch of space in the tray can be utilized, giving sufficient room to hold the liners for five machines. The trays are removable.

Below the liner trays are racks for holding the ejector blades. The racks are arranged with horizontal grooves at the bottom, that meet perpendicular grooves at the back. These grooves are thirteen points wide and one-half inch deep and are five-sixteenths inch apart. The bottoms of the grooves are lined with brass. The ejector blades are set on edge and pushed back until the ends rest in grooves at back, thus holding them upright. The cabinet has a roll front, with Yale lock, which safely secures the valuable contents.

List Prices and Dimensions of Liner and Ejector Blade Cabinets

No.	Outside Dimensions: Width Inches	Depth Inches	Height Inches	Weight Crated Pounds	[illegible]
1	22⅞	19½	21¼	120	$35 00
2	22⅞	19½	38⅜	180	48 00
3	22⅞	19½	52⅝	240	60 00

Special sizes and special cabinets, with any desired ar-[illegible], built to order. Drawings and estimates will be submitted on receipt of specifications.

No. 1 Cabinet has one liner tray and two ejector blade racks, with thirty-four grooves in each rack, and will give ample room for liners and ejectors for five machines.

No. 2 Cabinet has two liner trays and four ejector blade racks, sufficient for from six to fifteen machines.

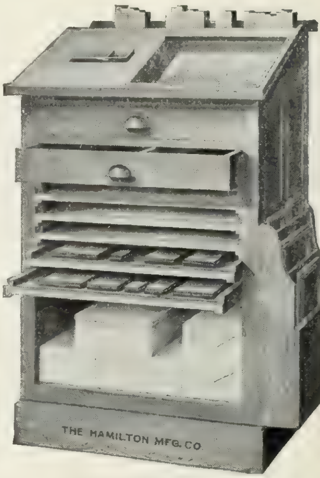
No. 3 Cabinet has three liner trays and six ejector blade racks, sufficient for from sixteen to thirty machines.

Dorsey Compositor's Working Cabinet

The Dorsey Compositor's Working Cabinet is a time saver and money maker. This Cabinet is as handsome as it is useful. Beautifully varnished and finished it stimulates personal pride and neatness, and is conducive to better workmanship.

Sloping top is same size as ordinary lower case. Eight-inch flat surface at top for slugs, etc. Two drawers each with two compartments for copy, tools, etc.

Five letter boards, twenty-one and one-half by twenty-four inches inside, to store forms as completed. Convenient galley racks at side to keep galleys off the floor, free from dust, and dirt, accommodate four brass galleys, as follows: One fifteen and one-half by twenty-two inches; one twelve and one-half by eighteen inches, and two regulation single column galleys.



The Dorsey Working Cabinet

List Price and Dimensions of Dorsey Compositor's Working Cabinet

Height, front, 45 inches; back, 53 inches. Width, 31 inches; depth, 25 inches.
List price **$36 00**

Working Galley or Job Bank

The entire surface, including the main working space and the compartments for sort boxes, rule case, etc., is full brass lined with heavy sheet brass. All division strips are also brass lined on both sides. The brackets fit into removable sockets which can be fastened to the end of a cabinet, or to the wall.

At the right is a compartment into which can be placed a quarter size rule case. At the top is a space filled with sixteen removable type or sort boxes, with metal bottoms screwed to the wooden rims. At the upper left-hand corner is a space with a heavy zinc cover. This space is for working tools like imposing rule, bodkin, etc. At the front is the main work-space, with open end at the left fitted with a lip to serve as a rest for brass galley. Size same as full size case.

Under letter boards is large open space for storage of cuts in work, personal property of compositor, etc.

List Prices of Working Galley or Job Banks

List price, full brass lined, including brackets **$20 00**
List price, full zinc lined, including brackets **16 00**

Galley Cabinets

The Galley Cabinets displayed on this page show the two styles of construction. One style with flat tops and flat ends, the other with galley tops and paneled ends. The Galley Top Cabinets are superior articles and the shelves rest on strips fastened to the upright center divisions and ends. This method of construction reinforces the frame and they are more rigid than the Cabinets with flat sides. In addition they have the sloping galley shelves on top, which are convenient for correcting purposes.

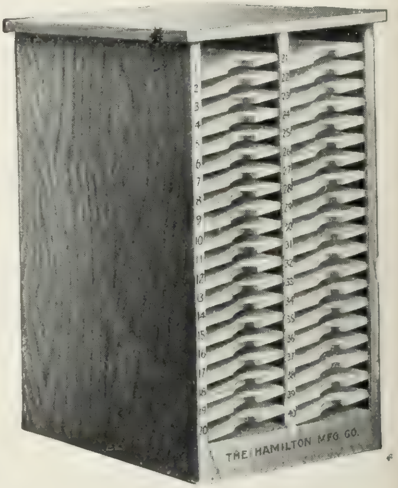
No. 3 Galley Top Cabinet with Paneled Ends

The Cabinets with flat tops and flat sides have the shelves grooved into the uprights and ends. They are strong and serviceable and in the smaller sizes they provide a satisfactory article at a very moderate cost.

Each shelf of a large size Galley Cabinet should be numbered, using metal number plates. When the galley is put in shelf, after being proved, the number of the shelf should be put on the proof slip. When proof is read the number on it indicates where the galley can be found. When the galley is corrected, the compositor may find that the shelf corresponding with the number of his proof slip is occupied by another galley, in which case he puts his galley in the handiest vacant shelf, and changes the number on the proof slip, so that when proofs are handed to make-up he finds the galley without any loss of time. The No. 3 Cabinet shown here is the most popular form and size and meets the requirements of the average printing office fully. It has galley top and paneled ends. An adequate equipment of Galley Cabinets will prove of great economical value in any well equipped office. No feature will prove so wasteful as the lack of a suitable place to store the loaded galleys. Such a condition results in much running about looking for desired matter; consequently, delays in the execution of work. It results in much pi, which is always expensive. All of this can be avoided by installing a systematic equipment of Galley Cabinets.

The No. 9 Flat Top Cabinet holds forty galleys and has flat ends.

Realizing fully the severe strain to which large galley Cabinets are subjected when filled with loaded galleys, the construction of these is such as to enable us to give an absolute guarantee that every galley Cabinet, large or small, will remain firm and rigid for an indefinite period. They are made of selected hardwoods throughout from well seasoned stock and finished like the best grades of printers' Cabinets.



No. 9 Flat Top Galley Cabinet with Flat Ends and Number Plates Attached

The efficiency of a Galley Cabinet is greatly increased by having the galley shelves numbered consecutively. This feature, as noticed by the price list below, is provided at a small addition to the list price.

List Prices and Dimensions of Cabinets with Galley Tops and Paneled Ends

Rowen Border and Script Type Cabinets

These Cabinets are invaluable for the life and preservation of delicate borders and script faces which soon become battered and worn by friction when thrown into the ordinary type or border cases. The hair lines soon become battered and the type is unfit for first class work. The result is inevitably the purchase of new type—the most expensive kind—or the production of inferior work, which eventually is still more costly.

This unnecessary waste of good material is completely avoided by the systematic use of the Rowen Cabinets.

No. 2 Rowen Border and Script Type Cabinet with Six Drawers

The Rowen Cabinets are handsome in appearance, made of hardwood throughout and beautifully finished. The ends are tastefully paneled and bronzed handles are attached to the case fronts.

These Cabinets are constructed, as shown in the illustration, with the drawers or cases pitched on an angle. The pieces of border or script type are set on end between the movable division strips, which leaves the faces exposed to the compositor and prevents any possibility of wear or friction of delicate type faces. The tilt of the cases prevents the type from falling down.

The slats or division strips are all made 18 points in thickness and the side rails are grooved at intervals of 6 points. Each case will hold thirty feet of 6 point, twenty-four feet of 12 point, twenty feet of 18 point, seventeen feet of 24 point, fifteen feet of 30 point, thirteen feet of 36 point type, etc. Fifteen pinch springs and fifteen division slats furnished for each drawer of a Cabinet. Extra springs, two cents each. Extra division slats, two cents each. All division slats are interchangeable.

Hamilton Correcting Bank

The Hamilton Correcting Bank is intended for the use of small or medium sized newspaper and job offices, where machine composition is done, and where the higher priced correcting banks somewhat exceed requirements. A large number of these banks are in use in newspaper offices throughout the country and are giving universal satisfaction. A convenient piece of furniture of this kind creates greater efficiency in any printing office. To get the desired amount of work out of employees it is essential to provide them with necessary conveniences so as to economize labor and time. While at first this class of furniture may seem somewhat expensive, yet in actual use it will be found to effect a considerable economy and after installation would not readily be dispensed with.

Hamilton Correcting Bank with Truck

The Hamilton Correcting Bank is a piece of modern printing office furniture especially adapted to linotype work. It is compact in form without waste of space. Three men can work at it without interference. It holds one hundred and twenty-six loaded galleys.

Above the top is a lead rack, subdivided into thirty-six divisions, which will accommodate thirteen-em leads and slugs. Immediately under the lead rack is an opening extending to a metal lined chute, through which the discarded slugs drop to the truck below. A rim extends around the edge of the sloping top to hold the galley and prevent material from falling off. The truck is of improved form, full metal lined, and mounted on heavy double castors, which insures easy motion when loaded with metal. This truck is equipped with a lever, which dumps the contents.

Floor space, twenty-five and one-half by fifty-nine inches; height at the front and ends, forty-four and three-quarters inches; total height to top of lead rack, fifty-seven and one-quarter inches. There are six tiers of galley racks, each tier accommodating twenty-one standard linotype galleys, twenty-four inches long. These galley shelves are five inches wide inside. The two shelves over the truck are twenty inches wide, and eighteen and three-quarters inches deep. The drawer under the top is seventeen by eighteen and one-quarter inches inside. The metal box of truck is thirteen inches wide, nineteen inches long, and sixteen and one-half inches deep, tapered with round bottom. Weight, without truck, crated for shipment, 650 pounds. Weight of truck, crated for shipment, 140 pounds.

List Prices of Hamilton Correcting Bank

With wood top, without truck	$ 90 00
With full brass lined top, without truck	110 00
Metal lined dumping truck	40 00

American Brass Label Holder

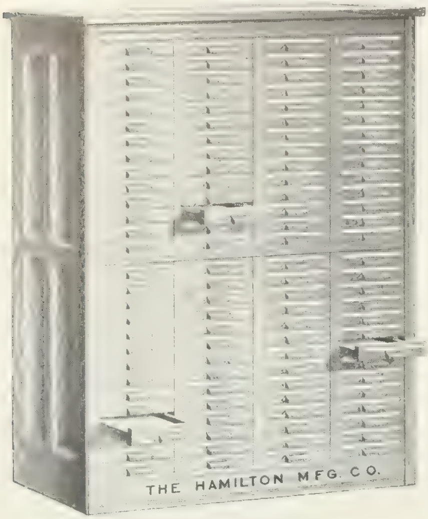
This is a simple and unique device for holding labels on the fronts of cases, cabinets, sort drawers, racks, trays, etc. It is stamped from sheer brass in one piece, and the labels can be changed as often as required without injuring the holder. The holder is attached to the case or drawer by three brass tacks and the label is inserted through the opening in the top. It is impossible for the label to slip sideways. Made in one size only.

List Price of American Brass Label Holder, complete with cards and tacks, per 100	$4 00
List Price of Celluloid Cards, 1x4½ inches, to cover labels, per 100	1 50

American Brass Label Holder

Page Form Storage Cabinets

It is only a few years since the letter board idea for the storage of standing matter was introduced. It would be difficult now to find a printing office without an adequate supply of letter boards arranged under the stone frames or in suitable cabinets. The letter board idea is certainly a most economical one and its general introduction has led to other improvements along this line.



Page Form Storage Cabinet No. 5

This new Page Form Storage Cabinet is primarily a cabinet filled with small letter boards of a suitable size to take standard size book pages. Each board is intended to take a single catalogue or book page. The idea has been thoroughly tested by some of the best stone men in the country, and it has met with unqualified approval. The page forms are stored away in the dust proof slides until required, and the long label-holder attached to the outside front of each slide enables the stone man to keep an accurate record of the contents of the cabinet. These labels are changed from time to time as the jobs progress. The labels are removed as the forms are taken to the pressroom. The unlabeled drawers will always show the space available for new page forms. The use of this cabinet concentrates an immense amount of material close to the hand of the stone man, so that there is little lost time in looking for material when it is required. Each slide has a back rail which is removable, so that the type forms can be pushed out from the back end to the stone. The back edges of the slides are beveled, as shown in the illustration, so as to facilitate the transfer of the type matter from the board to the stone.

These cabinets are constructed of selected hardwood. They are thoroughly braced to stand great weight, and are guaranteed to give perfect satisfaction. The woodwork is nicely finished and the cabinet as a whole will help to clean up the office and also give it an up-to-date appearance.

Book and Job Galley Cabinet

This Book and Job Galley Cabinet facilitates the handling of work and at the same time protects the type and plates. With the index system, used in connection with it, one is able to locate any page immediately, thus economizing time and labor.

Book and Job Galley Cabinet

It has horizontal three-ply galley shelves, all numbered consecutively. Each tier of shelves will accommodate fifty standard galvanized iron galleys, size eight and three-quarter by thirteen inches, the galley compartments being nine inches wide by thirteen and one-eighth inches deep. Total capacity of cabinet, two hundred and fifty galleys.

Two of these galley cabinets can be placed tightly together side by side, or back to back.

List Price and Dimensions of Book and Job Galley Cabinet

Occupies floor space 14¾x52¾ inches. **Height, 74 inches.**
Weight, crated, 475 pounds **$75 00**

Dorsey Combination Press Room Cabinet

The Dorsey Combination Press Room Cabinet holds everything unsightly found around a pressroom. Will clear up the office and reduce danger from fire. The top is covered with plate glass, substituting the old ink slab. The ink cannot penetrate the glass and can thus be readily scraped off; copying ink is as easily cleaned off as any other. Beneath the glass are receptacles for inks, oil cans, tympan paper, etc. Beneath this there is a drawer three and one-quarter inches deep, wherein are kept the wrenches and the other miscellanies which should ever be quickly available. Beneath this drawer is a compartment for scraps of paper, spoiled sheets and anything of a waste-basket nature.

Dorsey Combination Press Room Cabinet

The material is thrown into this drawer through a peculiar V-shaped open bin on the opposite side from where the drawer pulls; it is not necessary to open the drawer in order to put the material into it, but it is only open when the rubbish is removed to be emptied at night into the big trash sacks and carried to the furnace room. Below this drawer is a compartment for old rags. This rag compartment is lined with metal throughout to effectually obviate all danger should spontaneous combustion take place. This compartment is accessible from both sides of the cabinet by means of trap doors secured at the bottom with spring hinges. The cabinet is mounted on castors and therefore can be pushed about the pressroom as required.

List Price and Weight of Dorsey Combination Press Room Cabinet

Weight, crated, ready for shipment, and including glass top, 150 pounds. List price **$36 00**

Desks for Proof Readers, Copy Cutters and Ad Foremen

The Desks listed on this page have been designed at the suggestion of various proof readers and copy handlers in the more efficient plants, and have all proved to be aids to accurate, systematic and rapid work on the part of these important classes of employees, whose wants are generally neglected in the equipment of composing rooms. The work of these men is largely clerical, but as a rule they are working on makeshift desks, with inadequate facilities for taking care of their copy, proofs and records, while a clerk in the counting room drawing half the wages is provided with modern facilities. Upon the ad foremen, copy cutters and proof readers depends in a large measure the expeditious and economical development of the work from the time it enters the composing room until the forms are ready for press, and it is the reverse of economical to leave them unprovided with proper working facilities.

These desks are all made of hardwood, nicely finished, strongly constructed, and are attractive in appearance.

No. 3 Proof Reader's Desk. This is a good practical flat top desk, with sloping writing top. The sloping top can be raised and provides a convenient compartment underneath for the storage of proofs, which can be secured by locking. Medium sized hood, with drawers and book compartments in the pedestal. Made of selected hardwood throughout and with paneled backs and ends. The drawer bottoms are of three-ply material which cannot crack, swell or shrink.

List Price and Dimensions of Proof Reader's Desk No. 3

Extreme height to top of hood, 41 inches; width, 54 inches; depth, 24 inches; height of hood above writing bed, 10 inches; size of compartment under sloping writing bed, 20½x38½ inches; size of three drawers in pedestal, 6½ inches deep by 11½ inches wide by 19 inches long inside; size of two end drawers under writing top, 2½ inches by 11½ inches by 19 inches inside; size of center drawer under writing top, 2½ inches by 22¼ inches by 19 inches inside; height of book compartments in right-hand pedestal, 23 inches. Weight, crated for shipment, 300 pounds. List price $52 00

Mills Proof Reader's Desk No. 1 is specially designed for newspaper work; accommodates reader and copyholder, giving them facilities for alternating their duties if desired, and affords as great a degree of privacy and quietness as is possible in a busy news composing room. Each man has his own locked writing surface, which is hinged, and has a receptacle underneath. The receptacles at either end are for the receipt of copy and proofs without interrupting the readers, and the center receptacle is for dead copy. This desk is furnished with or without the Linolites shown in illustration. Each Linolite has a line of light ten inches long, and the hood acts as a reflector, at once diffusing the light over a large area and protecting the eyes from the glare.

Mills Ad Foreman's Desk No. 1

List Price and Dimensions of Mills Proof Reader's Desk No. 1

Length, over all, 60 inches; depth, over all, 23 inches; height to lower edge of writing surfaces, 33 inches; height, over all, 61 inches; size of hinged writing surfaces, 16x20 inches; size of copy and proof receptacles, 8x20x7 inches. List price . . $45 00
Linolites, attached and wired to the floor, extra, each 5 00

Mills Ad Foreman's Desk No. 1 is very strongly yet attractively made to withstand the stress of newspaper work. The foreman may work standing or sitting on a high seat. In front of him is a holder for the large pad on which he makes his records, so devised that the pad may be kept level with top of desk. There are seven compartments for the classification of copy, and eight locked drawers for taking care of all papers and records. The desk is furnished with or without the Linolite shown in the illustration. The merit of the Linolite is that it diffuses its light widely, while the hood acts as a reflector and protects the eyes from the glare.

List Price and Dimensions of Mills Ad Foreman's Desk No. 1

Length, 72 inches; depth, over all, 36 inches; height to writing surface, 41 inches; height, over all, 49¾ inches; size of classification compartments, 6x9½x12 inches. Six drawers are 7x17 inches inside, and two drawers are 13½x17 inches inside. List price $105 00
Linolite attached and wired for connection, extra 5 00

Mills Copy Cutter's Desk No. 1 is another piece of furniture strongly made to meet the needs of newspaper work, yet attractive in design. The copy cutter may work standing or sitting. In front of him is an ingenious holder for the pad on which he keeps his records, with a device for keeping the pad always on a level with the top of the desk. There are four copy classification divisions of the copy shelf, on which the copy files are kept, and there are eight locked drawers for holding paper and records. This desk is furnished with or without the Linolite shown in illustration, and described above.

List Price and Dimensions of Mills Copy Cutter's Desk No. 1

Length, over all, 60 inches; depth, over all, 32 inches; height to writing surface, 41 inches; height, over all, 54 inches, size inside of each division of copy shelf, 12x13½x4 inches; six drawers are 7x17 inches inside, and two drawers are 13½x17 inches inside. List price $90 00

Mills Proof Reader's Desk No. 1

Mills Copy Cutter's Desk No. 1

The Kaufman Imposing Stone Frame

The Kaufman is an improved imposing stone frame with a different interior arrangement accommodating electrotype cases and galley rack than found in most other stone frames of the kind. It will be found very useful in large offices and has proved to be one of the most popular imposing stone frames.

STONE. Of the best selected Vermont marble, two inches thick with a smooth imposing surface. All stones which we supply are from the famous Vermont quarries.

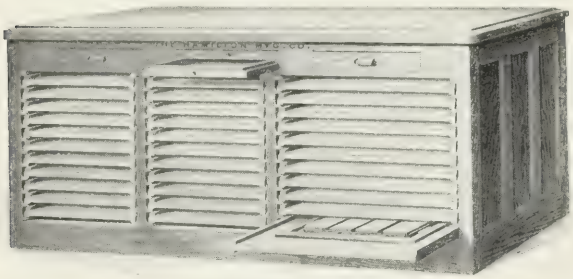
LETTER BOARDS. There are eleven letter boards, size fifteen inches by twenty-eight and one-half inches, inside measure, and twenty-two letter boards fifteen by twenty inches inside measure. These letter boards have a lip at the front on which to rest the galley and type matter can be pushed from the galley onto the board without difficulty. There is a rail at the back and also side rails to push the type against and hold it in position; they are made of the finest selected hardwood, free from imperfections, and a special feature of all the letter board construction is the provision for expansion.

DRAWERS. There are two drawers pulling clear through which can be drawn from either side of the frame; size, sixteen by forty and three-quarters by two and three-quarters inches. In the center there are two drawers for metal furniture, which pull clear through and can be drawn from either side. These drawers are sixteen by forty and three-quarters by one inches. They provide a convenient place for the systematic storage of the metal furniture where the stone man can always have it handy without leaving his work.

The Kaufman Imposing Stone Frame.

Size of Stone, 40x80 inches. Showing one side of the Frame with Indexed Electrotype Cases filled with cuts, Galleys in place on the Racks, Metal Furniture in upper shallow Drawers, and Sort Drawers showing sort divisions.

INDEXED ELECTROTYPE CASES. There are eighteen special indexed electrotype cases in this frame, twenty inches by twenty inches, inside. These cases are of the New Departure pattern with three-ply bottoms, covered with first quality manila paper. These bottoms cannot swell or contract, and owing to the nature of their construction, they cannot crack. These cases are numbered consecutively so that a proper record can be kept in the index book of the contents of each case. With each case there is an assortment of all kinds of division strips, including four of the long, double slotted ones which run from front to back of the case, and various sizes of the short, cross-division strips. An indexed book accompanies this frame for use in connection with these indexed electrotype cases.



The Kaufman Imposing Stone Frame.

Showing the opposite side of the same Stone with full Letter Board Equipment, providing 80 square feet of Letter Board surface for the storage of standing forms and tied-up type matter.

SORT DRAWERS. There are sixteen sort drawers in this frame, each divided into ten equal size compartments, the size of each compartment being three by four by three inches. These sort drawers provide storage room for an immense amount of special type not in general use, but which must be kept in readiness for special and large jobs.

GALLEY RACKS. This frame has accommodation for sixty galleys. There are three tiers to accommodate double-column galleys, and one tier to accommodate single-column galleys, fifteen galleys in each tier.

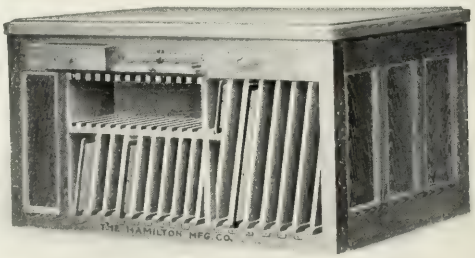
List Price and Dimensions of Kaufman Imposing Stone Frame

The shipping weight of this Frame, complete, with the Stone, is 1750 pounds. Weight of stone only, 770 pounds. This frame occupies floor space 42¼x82¼ inches. List price, complete with stone **$150 00**

The Algoma Imposing Stone Frame

The Algoma Frame takes a stone thirty-six by sixty inches, but with a change in equipment. The placing of the furniture on end is an especially good feature. It prevents waste of room. One end is entirely taken up by the reglet and furniture, which leaves the entire surface of both sides to be utilized for letter boards, chase racks and sort drawers, with the exception of ten inches, which is covered by panels, as shown. The assortment of reglet and furniture is in the usual widths from two to ten picas wide, and in the most convenient lengths from ten to sixty picas long, with variations of three to six picas. The reglet assortment is of nonpareil and pica from thirty to sixty picas long, with variations by single picas.

This is a most convenient frame for all around purposes, and embraces most of the good features of other stone frames combined into one piece of furniture. It is thoroughly made of selected hardwood, nicely finished and strongly bolted to safely carry any load to which it can be subjected. The use of this modern stone frame is decidedly economical. It contracts the space occupied by material used about the stone, and brings it within easy reach of the make-up man.

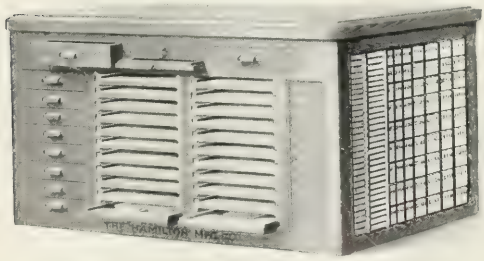


The Algoma Imposing Stone Frame. Size of Stone 36x60 inches.

LETTER BOARDS. There are twenty-two letter boards arranged in two tiers, eleven boards in each tier, size fifteen by seventeen inches, inside. These letter boards are made with lips on the front to receive the brass galley, so that type can be easily transferred from the galley to the letter boards or vice versa.

SORT DRAWERS. Eight sort drawers arranged in one tier. Each drawer is sub-divided into six compartments of equal size. Size of each compartment, five and one-quarter by four and three-quarters by two and three-quarters inches deep, inside.

DRAWERS. Under the coffin there are five drawers. All of these drawers run clear through the frame and can be withdrawn from either side. At the ends the two large drawers are four inches deep and thirteen and one-half by thirty-six and three-quarters inches inside. In the center are three shallow drawers for metal furniture, one inch deep and thirteen and one-half by thirty-six and three-quarters inches, inside. These three drawers will hold a large amount of metal furniture in a place most convenient for immediate use.



The Algoma Imposing Stone Frame. Size of Stone 36x60 inches.

CHASE RACKS. One side of the frame is taken up with chase-rack equipment. There are thirteen racks ten and one-half inches in height by twelve and one-half inches deep; ten racks sixteen inches high by eighteen inches deep; six racks twenty-seven and three-eighths inches high by eighteen inches deep. All of these chase-rack compartments are lined with iron on the bottom, turned at the edges to prevent damage to the woodwork when heavy forms are pushed into the compartments.

FURNITURE. A total of one hundred and eighty-one yards of selected oil soaked furniture of various widths cut on the point system and cut into ten hundred and eight pieces in the following assortments:

Sixteen pieces each 2, 3, 4, 5 and 6 picas wide cut into each of the following lengths—18, 21 and 24 picas long.

Eight pieces each 8 and 10 picas wide cut into each of the following lengths—18, 21 and 24 picas long.

Twenty pieces each 2, 3, 4, 5 and 6 picas wide cut into each of the following lengths—30, 36, 42, 48, 54 and 60 picas long.

Ten pieces each 8 and 10 picas wide cut into each of the following lengths—30, 36, 42, 48, 54 and 60 picas long.

REGLET. An assortment of nonpareil and pica, smooth and perfect in every respect and on the point system. Variation is by single picas in the following lengths:

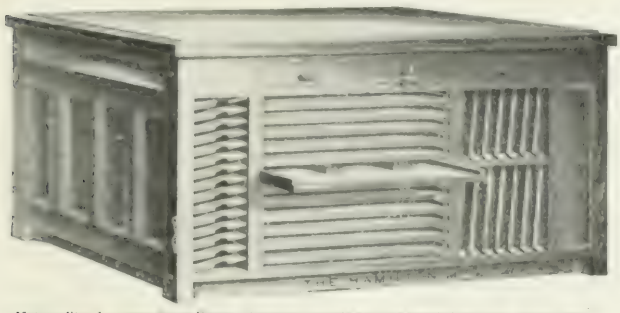
Thirty-four pieces each of nonpareil and pica thirty picas long to sixty picas long, with variations by single picas; a total of four hundred and fifty-eight yards cut into twenty-one hundred and eight pieces.

List Price and Dimensions of Algoma Imposing Stone Frame

Weight of Algoma Frame complete with stone and full equipment, crated, 1100 pounds. Weight of stone only, 500 pounds.
The Algoma Frame occupies floor space 38½x62½ inches. List price, complete **$136 00**

Metropolitan Imposing Stone Frame

The difficulty of devising an imposing stone frame to meet the requirements of all printers has been recognized, but it is claimed that the Metropolitan Frame will help to solve some of the problems. A successful effort has been made to meet the constant demand for a special stone frame, not only special in size, but special in arrangement of material under the stone.



Metropolitan Imposing Stone Frame. Showing one side and one paneled end with planer shelf. Note the recessed base with rounded, dustless corners.

Description

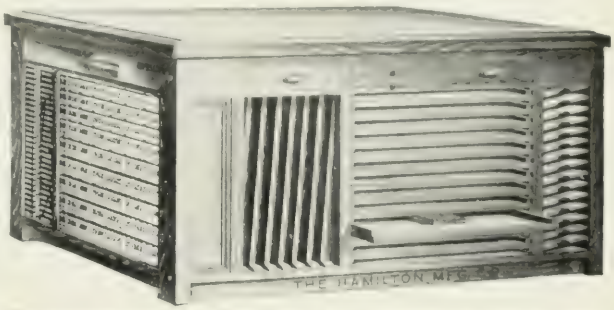
This frame takes a stone forty-eight by seventy-two inches, a size found very convenient in large city offices. The furniture and reglet are placed in one end. This is a most convenient arrangement and the material takes up very little space, leaving nearly all of both sides available for other equipment. The assortment of reglet and furniture is in the usual widths, from two to ten picas wide and from twelve to sixty picas in length. Certain features are distinctive. The ends are open, providing shelves or pigeon holes for planers and other tools. The base runs to the floor, thus preventing the accumulation of dust and refuse. It is also set back several inches, thus providing toe room for the workmen. The corners of the recessed foot rail are rounded, facilitating effective sweeping away of refuse. The letter boards are supported by heavy steel runs, thus utilizing all available space. This frame is fitted with the following complete equipment:

LETTER BOARDS. There are twenty-four letter boards, arranged in two tiers; twelve boards in each tier. Size inside, twenty-three and one-quarter by thirty and one-half inches, one tier on each side of the frame. Letter boards supported on heavy steel runs.

DRAWERS. Under the coffin there are four drawers, all of which run through the frame and can be drawn from either side. Two large drawers three inches deep and fourteen by forty-eight and three-quarters inches inside. Two shallow drawers one inch deep for metal furniture. These drawers are fourteen by forty-eight and three-quarters inches inside.

CHASE RACKS. On one side are six chase racks with vertical clearance of twenty-five and seven-eighths inches. Measurement from front to back thirty-two and one-eighth inches. On the other side are two series of six chase racks, measuring vertically fourteen inches and eleven inches, both series measuring seventeen and one-half inches from front to back. All chase racks are metal lined on the bottom, thus preventing injury to woodwork.

GALLEY RACKS. Two tiers of galley racks, one tier on each side of the frame, each tier having fourteen shelves for double column galleys.



The Metropolitan Imposing Stone Frame. Showing one side and one end with open planer shelf and reglet and furniture racks. Recessed dustless base.

FURNITURE. A total of two hundred and six yards selected, oil soaked, hardwood furniture in various widths and lengths, comprising eleven hundred and fifty-five pieces in the following assortment: Eighteen pieces two, three, four and five lines pica in width, cut 12, 18 and 24 picas long. Twelve pieces six and eight lines pica in width, cut 12, 18 and 24 picas long. Nine pieces ten lines pica in width, cut 12, 18 and 24 picas long. Twenty-four pieces two, three, four and five lines pica in width, cut 30, 36, 42, 48, 54 and 60 picas long. Sixteen pieces six and eight lines pica in width, cut 30, 36, 42, 48, 54 and 60 picas long. Twelve pieces ten lines pica in width, cut 30, 36, 42, 48, 54 and 60 picas long.

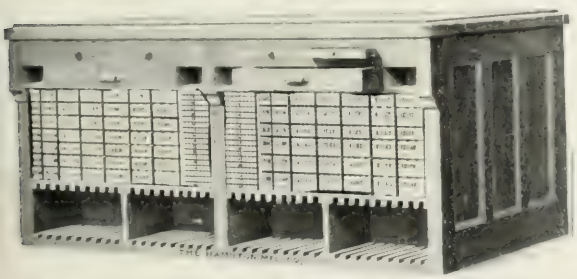
REGLET. An assortment of nonpareil and pica reglet, cut on the point system, smooth and perfect, with variations by single picas in the shorter lengths, and by three picas in the longer lengths. A total of two hundred and eighty yards, comprising twenty hundred and sixteen pieces.

List Price and Dimensions of Metropolitan Imposing Stone Frame

Height from floor to top of stone, 38 inches. Size of stone, 48x72 inches. Frame occupies floor space 50½x74½ inches. Weight, complete with stone and full equipment of reglet and furniture, 2250 pounds. Weight, complete without stone, 1360 pounds. List price, complete with stone **$195 00**

The Dorsey Imposing Stone Frame

The Dorsey Frame is the pioneer of all modern stone frames. It has proved very popular and is more often called for than any other frame of its kind. Modifications of this frame can be furnished at proportionate prices. It is made in one size only. The size of stone is forty by eighty inches, with smooth face and free from imperfections. The stone is two inches thick, of the best Vermont marble. The height from floor to top of stone is forty-one and one-half inches. The frame occupies floor space forty-two and one-quarter by eighty-two and one-quarter inches.



The Dorsey Imposing Stone Frame with Labor-Saving Furniture and Chase Racks

The frame contains a labor-saving rack filled with furniture. The furniture is cut in the following lengths and widths:

Eighteen pieces, each two, three and four-line; fifteen pieces, each five and six-line; nine pieces, each eight and ten-line, cut 25, 35, 70, 80, 90, 100, 120, 140 and 160 ems long. Twenty-four pieces, each two, three and four-line; twenty pieces, each five and six-line; twelve pieces, each eight and ten-line, cut 30, 40, 50 and 60 ems long. A total of five hundred yards cut into fifteen hundred and sixty-two pieces. The length and width is stamped on the end of each piece.

On the opposite side from the one shown in the illustration, over the chase rack, are two large compartments for general storage; one compartment is seventeen inches deep, thirty-seven inches long and ten and one-half inches high; the other is twenty-eight inches deep, thirty-seven inches long and thirteen inches high. This arrangement utilizes every inch of space under the stone. The frame has paneled ends, is varnished, and is a beautiful piece of printing office furniture.

At the bottom, on the side shown in illustration, are thirty-six racks for chases for 8x12 job press. On the opposite side are racks for eighteen chases for 10x15 job press, and eighteen chases for 12x18 job press. On the sides of second tier of drawers there are eight compartments, four on each side of the frame, for string or small tools.

In the center, arranged in double tier, are thirty-six compartments for steel furniture or cut reglets. These compartments hold the following lengths: 12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57 and 60 ems; two compartments for each length, except the 42-em length, which has four compartments. Each compartment holds thirty-five pieces of pica or seventy pieces of nonpareil reglet, or eleven pieces of steel furniture, three picas wide.

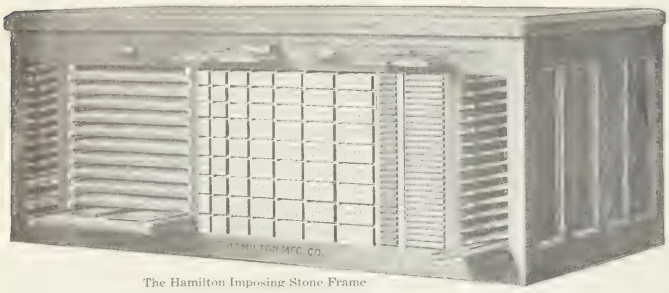
There are six drawers at the top. On the left-hand side, extending half-way through, are two pulling out from each side and two on the right-hand side at the top, reaching clear through, and can be pulled out from either side.

List Prices and Dimensions of the Dorsey Imposing Stone Frame and Equipment

Complete, ready for shipment, including stone, 1700 pounds. Weight of stone only, 770 pounds. Price of font of reglet to fill the center racks, **$14.00**. Price of font of steel furniture to fill the center racks, **$100.00**. This font consists of 22 pieces of each length as mentioned above, except the 42-em length, of which there are 44 pieces—a total of 396 pieces. Without the steel furniture or reglet, but including the labor-saving wood furniture, complete **$140 00**

The Hamilton Imposing Stone Frame

This is the largest stone frame made or ever listed. In large offices it will be found of inestimable value in providing a large space where the stone hand can work freely without interfering. It is firmly constructed of hardwood throughout and finished the same as the best cabinets. The stone is hard and the best procurable. This is the only stone frame or other piece of printing office furniture which provides labor-saving reglet and furniture from small sizes up to yard-lengths, with frequent variations.



The Hamilton Imposing Stone Frame

GALLEY RACKS. This frame has accommodations for two tiers of galleys on each side, fourteen galleys in each tier, a total of fifty-six double-column galleys.

REGLET RACKS. One on each side of the frame; on one side lengths are accommodated as follows: 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57 and 60 picas. There are thirty-eight pieces of nonpareil and thirty-eight pieces of pica of each length. On the other side of the frame the following lengths are accommodated: 63, 66, 69, 72, 78, 84, 90, 96, 102 108, 114, 120, 126, 132, 138, 144, 150, 156, 162, 168, 174, 180, 186, 192, 198, 204, 210 and 216 picas. There are thirty-eight pieces of nonpareil and thirty-eight pieces of pica of each length, making a total of forty-two hundred and fifty-six pieces of reglet, amounting to sixteen hundred and thirty-nine yards, all cut labor-saving and comprising lengths by short variations from twelve picas to one yard, or two hundred and sixteen picas.

FURNITURE. There are two furniture racks—one on each side of the frame; on one side the following lengths are accommodated: 12, 18, 24, 30, 36, 42, 48, 54 and 60 picas, the variations being by six picas or inches.

The assortment is as follows: Eighteen pieces of two-line; fifteen pieces of three, four, five and six-line; twelve pieces eight and ten-line; all cut 12, 18 and 24 picas long. Twenty-four pieces two-line; twenty pieces three, four, five and six-line; sixteen pieces eight and ten-line, cut 30, 36, 42, 48, 54 and 60 picas long.

On the other side of the frame, the following lengths are accommodated: 70, 80, 90, 100, 120, 140, 160, 180, 200 and 216 picas, the latter being yard lengths.

The assortment is as follows: Eighteen pieces two-line; fifteen pieces three, four, five and six-line; twelve pieces eight and ten-line, of each of the lengths from seventy to two hundred and sixteen picas, as given above, together, comprising the furniture on both sides of the frame, this makes a total of twenty-two hundred and forty-four pieces or eight hundred and eighty-eight yards of labor-saving furniture.

LETTER BOARDS. The frame contains eleven letter boards, size twenty-four and one-half by forty-nine inches inside measure. These run through the frame and can be drawn from either side. They have a removable partition bar across the center which can be used to back the type against when desired. The fronts of these letter boards are rabbeted so that the galley can rest on the front edge and type matter readily pushed on the boards.

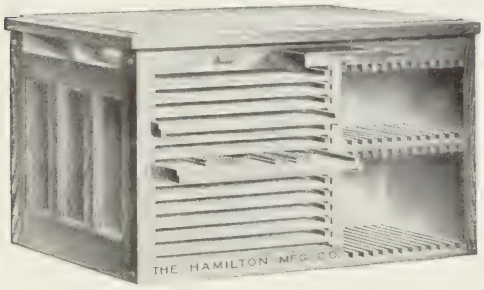
DRAWERS. There are six drawers in the upper part of the frame, all of which run clear through and can be drawn from either side. The sizes of the drawers are as follows (inside measurments): One drawer thirteen and three-quarters by forty-eight and one-half by two and one-half inches; one drawer twenty-five by forty-eight and one-half by two and one-half inches; two drawers eight and three-quarters by forty-eight and one-half by one inch; two drawers thirteen and three-quarters by forty-eight and one-half by one inch. The four one-inch drawers are for the storage of metal furniture laid in single depth.

List Price of Hamilton Imposing Stone Frame

The weight of this stone and frame, complete, ready for shipment, including all the reglets and furniture is 2800 pounds.
Weight of stone only, 1100 pounds. List price **$290 00**

Ramaley Imposing Stone Frame

This is a Frame of general utility and of considerable service in small and medium size offices where the stone service is not extensive. It contains a wide variety of equipment in limited form. In compactness it cannot be surpassed, as all space is utilized. Built of hardwood throughout with ends paneled and moulded and well finished. Furnished with the following equipment:



Ramaley Imposing Stone Frame. One view showing letter boards and chase racks

LETTER BOARDS. Thirteen letter boards on one side in one tier, size inside, thirty and one-half by twenty-one and one-half inches. These letter boards are supported on heavy angle-iron steel runs, guaranteed to carry any load which can be placed on the boards. All boards are lipped at the front.

SORT DRAWERS. Six drawers easy of access, all being located near the top, each drawer divided into ten compartments. Size of each compartment three and five-sixteenths by three and one quarter by two and one-eighth inches.

CHASE RACKS. On one side the chase racks are placed in double tiers, the lower tier having a perpendicular clearance of sixteen and seven-eighths inches and with a depth of twenty-four inches. The upper tier has a clearance of twelve and seven-eighths inches and with a depth of seventeen inches. Each tier accommodates twelve chases. On the other side the chase racks have a clearance of seventeen and five-eighths inches, and a depth of twelve and three-quarters inches, accommodating nine chases. All chase racks are steel-lined on the bottom.

FURNITURE. Of clear, selected stock, each piece with the length stamped on the end. There are nine lengths and seven widths, assorted as follows: Eighteen pieces each of two and three line, cut 10, 15 and 20 picas long. Fifteen pieces of four line, cut 10, 15 and 20 picas long. Twelve pieces each of five and six line, cut 10, 15 and 20 picas long. Nine pieces each of eight and ten line, cut 10, 15 and 20 picas long.

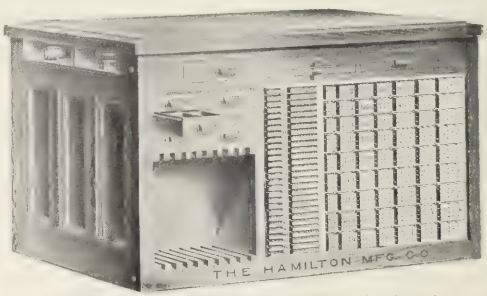
Twenty-four pieces each of two and three line, cut 25, 30, 40, 50, 60 and 70 picas long. Twenty pieces of four line cut, 25, 30, 40, 50, 60 and 70 picas long. Sixteen pieces each of five and six line, cut 25, 30, 40, 50, 60 and 70 picas long. Twelve pieces each of eight and ten line, cut 25, 30, 40, 50, 60 and 70 picas long.

A total of ten hundred and twenty-three pieces, comprising one hundred and eighty-one yards of the best oil-soaked furniture.

REGLET. A double rack, with separate compartments for nonpareil and pica in each length. Holds thirty-four pieces each of nonpareil and pica in each of the following lengths: 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 33, 36, 40, 42, 48, 50, 60 and 70 picas, a total of two hundred and forty-four yards cut into nineteen hundred and four pieces.

METAL FURNITURE AND TOOL DRAWERS. There are six drawers in the rail under the stone. The top drawer in the center runs clear through and pulls from either side. The size of this drawer is thirteen and one-half by thirty-seven by one and one-half inches inside. The other five drawers run half way through, three pulling from one side and two from the opposite side. These drawers are most convenient for the storage of metal furniture, side sticks, column rules and all small tools.

OPEN BINS. At the end are open bins, each divided into two compartments, useful for holding mallets, planers and other similar tools.



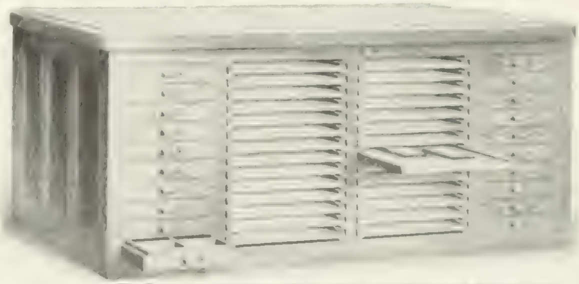
Ramaley Stone Frame. View showing furniture and reglet rack

List Price and Dimensions of Ramaley Imposing Stone Frame

The Frame occupies floor space of 38½x62½ inches. Weight of stone only, 500 pounds. Shipping weight, complete with stone, 1150 pounds. List price, complete with stone, including the furniture and reglet **$135 00**

The Texas Imposing Stone Frame

This Stone Frame differs from others only in the interior arrangement under the stone. It is most substantially constructed of selected hardwood, strongly bolted, and the floor space occupied is reduced to the minimum. It is economical in the fullest sense of the term as it replaces several pieces of ordinary printing office furniture. While the expense may seem large to install, it ends with the purchase. This saving in expense is not only in material but in labor.



The Texas Imposing Stone Frame with Letter Boards and Sort Drawers

SORT DRAWERS. There are twenty drawers for sorts, and each drawer is sub-divided into twenty equal compartments. Each drawer is two and one-half inches deep, fourteen inches wide and forty and three-eighths inches long, inside measure. Each of the four hundred compartments is three and three-quarters inches by six and three-quarters inches. Ten of these drawers are at each end of the frame, and all run clear through and draw from either side. Each drawer runs on twelve steel rollers, fitted into the runs, six on each side.

LETTER BOARDS. In the center, arranged in four tiers, two tiers drawing from each side, are fifty-six hardwood letter boards, fourteen boards in each tier. These are placed compactly and represent one hundred and forty square feet of storage surface. These letter boards are eighteen and one-half inches by nineteen and one-quarter inches, inside measure. They are lipped in front to receive the galley and have retaining walls at side and back.

List Price and Dimensions of Texas Imposing Stone Frame

Occupies floor space 42¼x82¼ inches. The size of the stone is 40x80 inches and 2 inches thick. The coffin enclosing the stone is depressed 1/16 of an inch below the top of stone, and is used as a rest for the galley, so that type matter can be passed from the stone to the galley. Height from floor to top of stone, 41½ inches. Weight, complete, ready for shipment, including stone, 1900 pounds. Weight of stone only, 770 pounds. List price, complete **$150 00**

The Two Rivers Imposing Stone Frame

The Two Rivers Frame embodies many good features of other frames, at the same time providing letter board and sort drawer equipment. It is strongly constructed of selected hardwood and is well bolted. The finish is like the best printers' cabinets.

Two Rivers Imposing Stone Frame Front View

LETTER BOARDS. Eleven Boards on one side, inside measure, twenty-five by thirty and one-half inches.

These boards are lipped at the front to receive the brass galleys.

SORT DRAWERS. Sixteen in two tiers, each divided into ten equal compartments, size four and one-half by four and three-eighths by three inches inside.

DRAWERS. Two large drawers at top which run through frame and can be drawn from either side. Size inside, thirteen and one-quarter by thirty-seven by two and three-quarters inches.

In the center, at the top, one above the other, running through the frame from side to side are two drawers for the storage of metal furniture. Size inside, thirteen and one-quarter by thirty-seven by one inches.

FURNITURE. Of clear selected stock, oil soaked, each piece with length stamped on the end. This furniture and reglet equipment is cut on our own special machinery, which insures its accuracy.

There are nine different lengths, as follows: 12, 18, 24, 30, 36, 42, 48, 54 and 60 picas, the variation being by inches or six picas. The widths and number of pieces are as follows:

Eighteen pieces of two-line cut 12, 18 and 24 picas long. Twenty-four pieces of two-line cut 30, 36, 42, 48, 54 and 60 picas long; fifteen pieces of three, four, five and six-line cut 12, 18 and 24 picas long; twenty pieces of three, four, five and six-line cut 30, 36, 42, 48, 54 and 60 picas long; twelve pieces of eight and ten-line cut 12, 18 and 24 picas long; sixteen pieces of eight and ten-line cut 30, 36, 42, 48, 54 and 60 picas long. Total number of pieces, eleven hundred and twenty-two; amounting to two hundred yards.

REGLET. Absolutely accurate and on the point system. A double rack for holding thirty-seven pieces of nonpareil and thirty-seven pieces of pica of each of the following lengths: 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57 and 60 picas, a total of twenty hundred and seventy-two pieces, amounting to two hundred and ninty yards.

Stones are of the best Vermont marble, and with perfect imposing surfaces. All our stones are from the famous Rutland quarries.

Roller Compartment is made with door. Rollers stand on end. Has accommodations for three rollers each for eight, quarto and half medium presses. When roller compartment is not required, this cupboard can be used for a variety of purposes. An additional shelf will convert it into a convenient ink cabinet or it can be used for the storage of galleys, etc.

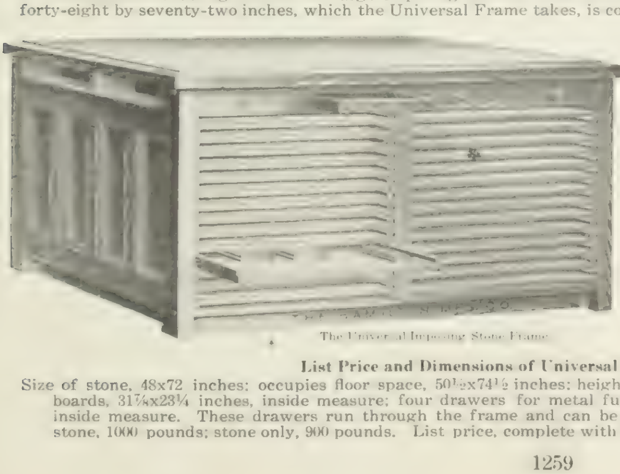
Shipping weight, with stone complete, 1140 pounds. Weight of stone only, 500 pounds. The Two Rivers Frame takes a floor space 38½x62¼ inches. List price, complete with furniture, reglet and stone . . . **$125 00**

The Universal Imposing Stone Frame

There is an increasing demand for large Imposing Frames with an abundance of Letter Board surface. The size of Stone, forty-eight by seventy-two inches, which the Universal Frame takes, is coming into general use.



The Universal Imposing Stone Frame

This thoroughly modern and compact Frame is fitted with the dustless recessed bottom, with no square corners for the accumulation of dust. The runs supporting the letter boards are of heavy angle iron.

The material is all selected hardwood throughout; the ends are paneled with moulded edges, and all outside surfaces have the same finish as our best cabinets.

Both sides are alike, there being four tiers of letter boards—two tiers on each side, fourteen boards in each tier. These letter boards are made of the very choicest selected hardwood, free from every imperfection, and are lipped at the front to receive the galley. The fifty-six letter boards provide two hundred and eighty-eight square feet of surface, while the frame occupies a floor space of twenty-six square feet, and, in addition, provides twenty-four square feet of stone surface and sixteen square feet for metal furniture in the four drawers. The ends of the frame under the stone are open, providing convenient shelving for planers and other working tools.

List Price and Dimensions of Universal Imposing Stone Frame

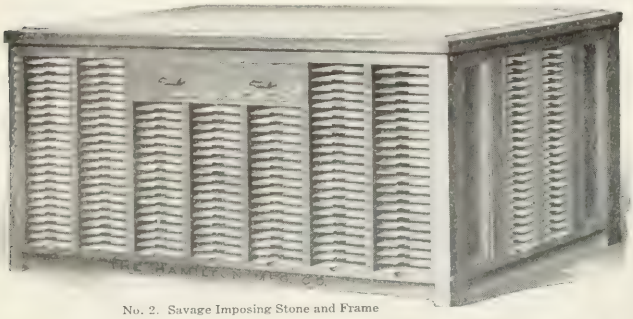
Size of stone, 48x72 inches; occupies floor space, 50½x74½ inches; height from floor to top of stone, 38 inches; size of letter boards, 31⅞x23¼ inches, inside measure; four drawers for metal furniture in the upper rail, size 12⅛x48¾x1 inches, inside measure. These drawers run through the frame and can be pulled from either side. Weight, crated, without stone, 1000 pounds; stone only, 900 pounds. List price, complete with letter boards and stone **$165 00**

Savage Imposing Stone Frames

The Savage Imposing Stone Frames are designed to carry individual galleys. The shelves are numbered consecutively, and by marking the proofs of the pages with the corresponding numbers of the shelves upon which the pages are stored, any particular page can be located instantly when wanted. While specially valuable for pages of tariffs, directories, catalogues, etc., this arrangement is equally adapted to forms of every description. Some disposition, temporary at least, must be made of every form. If left on the stone, it occupies working space; if placed upon letter boards or stacked upon shelving, no one but the compositor who put it there can find it. When found, it is frequently underneath or surrounded by other matter which has to be removed and replaced, with consequent loss of time and damage to material.

These frames provide a place for every form, where it does not occupy valuable working space, yet where any compositor can go directly to the galley containing the desired page without unnecessary loss of time.

The pages being on galleys can be handled quickly and conveniently, without danger of pi. Corrections can frequently be made on the galleys and proofs taken if desired. Printers will recognize the advantage of this method of carrying standing pages. These frames have recessed sanitary bases, as shown in illustrations.



No. 2. Savage Imposing Stone and Frame

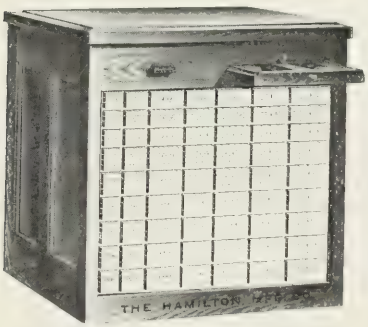
Economic Imposing Stone Frame

This is the smallest imposing frame made, taking a stone twenty-four by thirty-six inches. It is a modern Frame and possesses many of the excellent features found in much larger frames. There are eleven letter boards on one side, size inside, thirty-three inches wide and of varying depths from thirteen and one-half to nineteen inches.

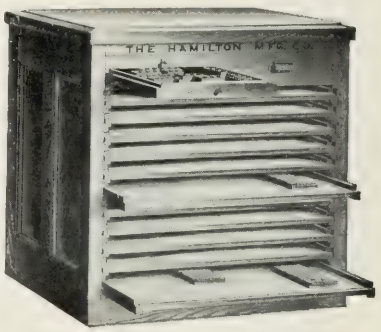


Economic Imposing Stone Frame. Size of Stone 24x36

At the top there are two drawers for the storage of metal furniture and one deep drawer for quoins, tools and other accessories; these drawers run clear through the Frame, and can be drawn from either side.

On the other side of the Frame is an assortment of wood furniture, as follows: twenty-one pieces, two, three and four-line; fifteen pieces, five and six-line; twelve pieces, eight and ten-line, cut 12, 18 and 24 picas long. Twenty-eight pieces, two, three and four-line; twenty pieces, five and six-line; sixteen pieces, eight and ten-line, cut 30, 36, 42, 48, 54 and 60 picas long. This is a fine assortment of lengths and widths most used, and brings the furniture close to the stone man, where it is required.

The Frame is strongly constructed, of hardwood throughout, and the stone is of the finest quality. A strictly first-class piece of furniture in every way, and fully guaranteed to give perfect satisfaction to our customers.



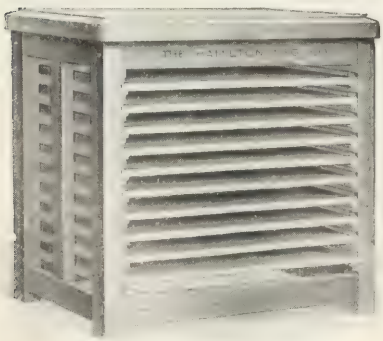
Economic Imposing Stone Frame. Size of Stone 24x36

List Price and Weight of the Economic Imposing Stone Frame

Weight, crated, ready for shipment, without stone, 450 pounds, including stone, 650 pounds. List price **$60 00**

Imposing Stone Frames with Letter Boards

No. 1 Imposing Stone Frame is constructed of hardwood throughout, strongly bolted to carry great weight and handsomely finished. Letter boards are lipped at the front to receive the galleys and have retaining rims at the ends and back. Boards can be pulled from either side of the Frame, but are lipped only on one edge. Size of stone, twenty by twenty-five inches, best Vermont marble, two inches thick. Furnished complete with ten hardwood letter boards. Size of letter boards, inside measure, twenty by twenty-two inches.



Style of Nos. 1, 2 and 3 Imposing Stone Frames with Letter Boards

No. 2 Imposing Stone Frame is the same as No. 1, except it is made in the following dimensions, and is most convenient for six-column two-page forms: Size of stone, twenty-four by thirty-six inches. Size of letter boards, inside measure, twenty-four by thirty-two inches.

No. 3 Imposing Stone Frame is the same as No. 1 and No. 2, except it is made in the following dimensions: Size of stone, thirty-two by forty-eight inches. Size of letter boards, inside measure, thirty-two by forty-four inches. This frame is especially recommended as one to meet the requirements of the average modern printing shop.

List Prices and Dimensions of Imposing Stone Frames

Imposing Stone Frame No. 1: Height, 38 inches; width, 22½ inches; length, 27½ inches. Weight, crated, complete without stone, 200 pounds. Weight, crated, complete with stone, 310 pounds. List price, complete with stone . . **$27 00**

The Wisconsin Imposing Stone Frame

This is a most useful Frame, containing racks for large sizes of chases. We furnish this Frame with plain blank cases as shown in the illustration, or with indexed electrotype cases. This Frame is thoroughly well built of hardwood throughout and bolted at the ends. The coffin is of selected oak. The ends are tastefully paneled with moulded edges.

On one side of this Frame there are twenty-eight cases, size inside, fifteen by twenty-six inches. These cases are arranged in two tiers, fourteen cases in each tier. They are of the New Departure pattern with three-ply bottoms, and as placed in the Frame are practically dust proof. On the other side are chase racks, as follows:

Nine compartments, size inside, twenty-six by eighteen inches.

Nine compartments, size inside, fourteen by eighteen inches.

Nine compartments, size inside, eleven and one-half by fifteen inches.

The bottoms of chase racks are covered with heavy sheet iron, turned at front edge and securely fastened, thus preventing injury to the Frame by the iron chases when pushed into place.

At the top are two drawers, running through the frame, and they can be drawn from either side. These are for quoins, tools, furniture, etc.

The Wisconsin Imposing Stone Frame—Front View

The stone is of the best Vermont marble, two inches thick, and free from imperfections. This stone is hard and makes the best stone imposing surface ever offered. The top of the stone is thirty-eight inches above the floor.

Weight of frame, complete with stone, eleven hundred pounds.

Weight of stone only, five hundred pounds.

Occupies floor space, thirty-eight and one-half by sixty-two and one-quarter inches.

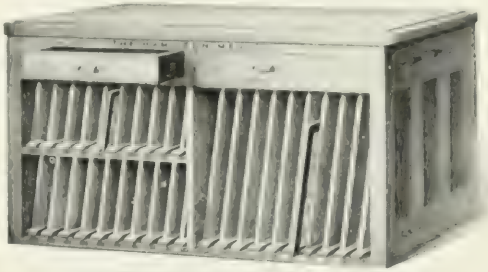
With twenty-eight indexed electrotype cases and full equipment of division strips and index book, complete and including the stone	105 00



The Wisconsin Imposing Stone Frame—Rear View

Imposing Stone Frames with Square Legs

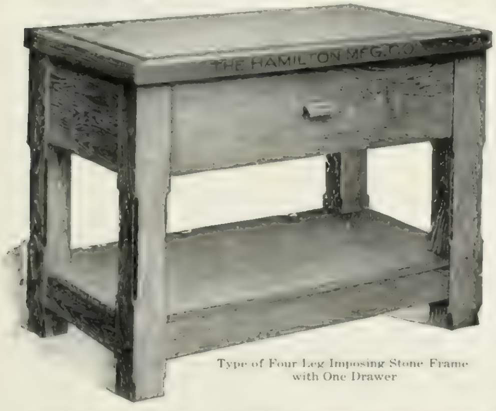
The imposing stone frame is an important piece of furniture in every printing office and should be carefully selected with a view of getting the best the market affords. This splendid frame is substantially constructed of selected hardwoods, the coffin is of oak, and is so made that when the stone is bedded it will project one-sixteenth of an inch above the coffin. This ledge is to receive the galley which rests on the coffin. Type matter can be transferred from galley to stone without danger of damage. The Square Leg Frame is made with four or six legs, according to size. All six leg frames have two drawers, while the four leg frames have one drawer.

These drawers run through the frame and can be withdrawn from either side. The frame is furnished in the white, without finish, and shipped in knockdown form, with the stone crated separately.

It is equipped with the finest grade of Vermont marble, the best stone imposing surface in the world. The weight of the imposing stone is the standard thickness of two inches, is approximately thirty pounds per square foot, uncrated, and thirty-seven pounds crated.

A liberal equipment of imposing surface will help to secure the maximum output. The utility of a stone frame is doubled by utilizing the space underneath for letter boards, chase racks, furniture, reglet, etc. The low-priced, square-legged frame will answer admirably in a country office where space is not at a premium.

These frames are made of hardwood in knockdown form. This insures convenience in handling, and large frames can be taken up stairways and through narrow doors.



Type of Four Leg Imposing Stone Frame with One Drawer

To properly bed an imposing surface it should be laid in putty. Take the stone and place on skids on the floor face down. Roll strips of putty and lay on the stone where the supporting strips will rest. Take coffin and reverse, placing it over the stone. Lift coffin and stone together and place on the frame. Tap stone to thoroughly bed it and see that it projects evenly above the inner edge of the coffin the thickness of a brass galley bottom. Fill space between edges of stone and coffin with putty.

Square leg stone frames can be furnished for iron surfaces. These do not usually require a coffin, which reduces the list price of the frame 50 cents per foot the long way. For instance a 36x60 frame without the coffin would take a reduction in the list price of $2.50. When iron surface is to be used customers should determine the exact size of the iron surface which should conform with the size of the frame. It is usual to allow iron surfaces to overlap the edges of the frame one-half inch all around.

All imposing stones are crated separately and are shipped at customer's risk. As stones are very heavy this is necessary in order to get a low freight rate. If shipped released they take fourth-class rate, if not released they take first-class rate.

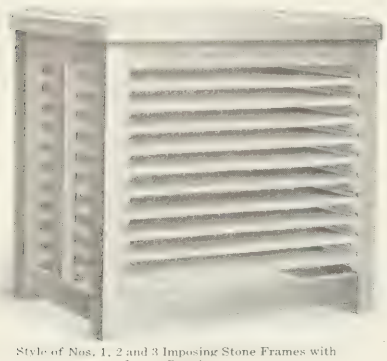
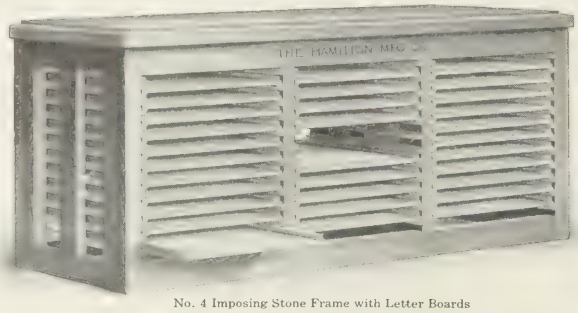
Transfer Imposing Stone Frame

Imposing Stone Frames With Letter Boards

The general use of Imposing Stone Frames with all space under the stone utilized is steadily increasing and few printing offices are now without one or more of these decidedly economical pieces of modern printing office furniture. The following list of imposing stone frames with letter boards is a comprehensive one, but as it is not always possible to meet the requirements of every printer with a stock frame, we are prepared to supply special frames to meet any desired condition. The No. 1 Imposing Stone with Letter Boards, as well as all the frames



Style of Nos. 1, 2 and 3 Imposing Stone Frames with Letter Boards

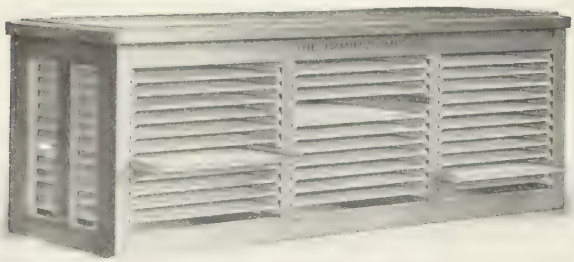


No. 4 Imposing Stone Frame with Letter Boards

described here are constructed of hardwood throughout and strongly bolted to carry great weight. They are all handsomely finished. The letter boards are lipped at the front to receive the galleys and with retaining rims at the ends and back. The boards can be pulled from either side of the frame, but are lipped only on one edge. All stones are of the best Vermont marble, two inches thick. For dimensions and prices, etc., see list below.

The No. 2 Imposing Stone Frame is the same as the No. 1, except in size and is most convenient for six-column two-page forms.

The No. 3 Imposing Stone Frame is the same as the Nos. 1 and 2, except in dimensions, which will be found in the list annexed.



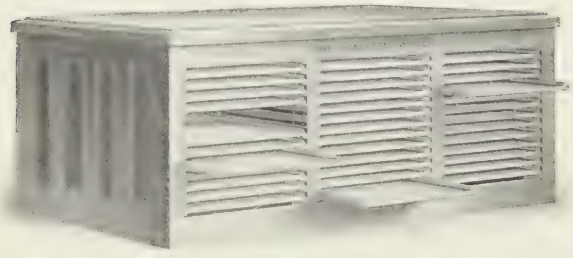
No. 6 Imposing Stone Frame with Letter Boards

No. 5 Imposing Stone Frame with Letter Boards

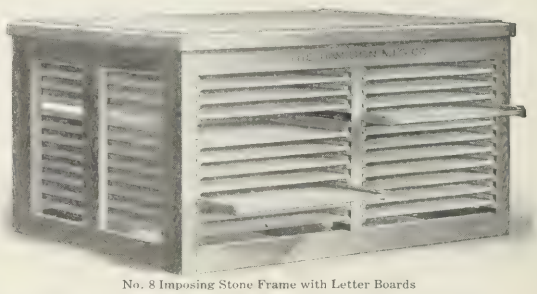
The No. 4 Imposing Stone Frame is large and commodious and will safely carry any load to which it can be subjected. All outside surfaces are nicely varnished and finished in a manner equal to the best cabinet work. The boards are arranged in three tiers, eleven boards to each tier. This size is most convenient for nine-column four-page forms.

The No. 5 Frame is compact and substantial and most serviceable for seven-column two-page forms. The boards can be drawn from either side of the Frame.

The No. 6 Imposing Stone Frame is most substantially constructed to carry great weight. The boards are lipped on one front edge only to receive the brass galleys, so that type can be easily transferred from the galleys to the boards, and back to the galleys again. The size is most convenient for seven-column four-page forms.

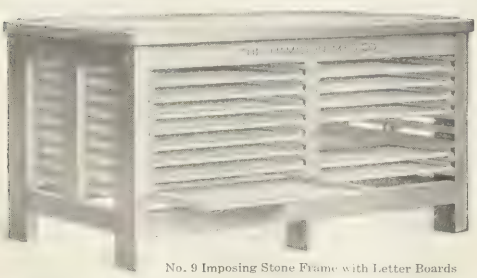


No. 7 Imposing Stone Frame with Letter Boards

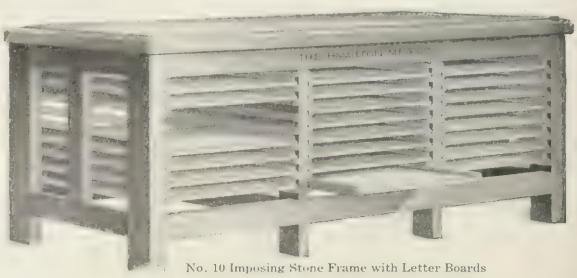


No. 8 Imposing Stone Frame with Letter Boards

The No. 7 Frame with Letter Boards. Where concentration and great storage capacity is desired, the No. 7 Frame will meet all requirements. Nothing could be more substantial. The materials are the best selected hardwood, steel and stone throughout. The ends are paneled, with moulded edges, and all outside surfaces are nicely varnished and finished equal to the best grades of cabinet construction. There are six tiers of hardwood letter boards, arranged thirteen boards to each tier; three tiers of boards



No. 9 Imposing Stone Frame with Letter Boards



No. 10 Imposing Stone Frame with Letter Boards

pulling from each side of the Frame. The letter boards are of the finest selected stock, free from imperfections, and are smooth and well finished. They have retaining rims on the ends and backs to hold the type forms in position. All the runs on which the

Imposing Stone Frames With Letter Boards—Continued

boards ride are of heavy angle iron, and will carry any weight which can be placed on the boards. Each letter board has four steel rollers fitted on the under side to insure easy motion when boards are heavily loaded. There can therefore be no wear on the wooden parts, and the Frame will last indefinitely, and will give excellent service.

The No. 8 Frame represents a good example of economical concentration. It has great storage capacity, and the stone is of a size most convenient for seven-column quarto four-page forms; is substantially constructed throughout, and nicely finished. The boards are arranged in four tiers, two tiers pulling from each side of the Frame, eleven boards in each tier.

The No. 9 Frame is a most popular medium sized Frame, and comparatively low priced. While not so compact as some of the other frames, it has large storage capacity. The bottom rails being raised from the floor prevents dust and dirt from accumulating underneath. The boards are arranged in four tiers, two tiers drawing from each side of the Frame. This Frame is a most convenient size for six-column quarto four-page forms.

The No. 10 Frame represents one of the best all around pieces of printing office furniture ever listed. Hundreds are in use in the best offices. It is strongly constructed of selected hardwood, well bolted and will carry any weight which can be put into it. The boards are arranged in six tiers, three tiers drawing from each side of the Frame. The fronts of these boards are lipped to receive the brass galleys, and they have retaining rims on the ends and at the back.

Illustrations of the No. 8, No. 9 and No. 10 Frames will be found on the preceding page.

Standing Galley with Letter Boards

This standing galley is specially constructed for use in machine offices requiring large storage room for type forms.

It is equipped with twenty hardwood letter boards, providing one hundred and two square feet of letter-board surface and accommodating twenty-eight double-column galleys.

No. 10 Standing Galley with Twenty Letter Boards and Galley Racks

The letter boards can be used for large and tied-up forms, while the small matter and untied forms can be accommodated in the series of galley racks at one end which will take twenty-eight triple-column brass-lined galleys. The frame is substantially constructed to stand great weight. The letter boards are made of hardwood with side rails mortised to bottoms as shown in the illustration. These letter boards are lipped at the fronts to receive the brass galley, thus facilitating the transfer of type matter from galley to boards and vice versa. These twenty large letter boards provide one hundred and two square feet of storage surface.

When top is brass lined it contains over forty pounds of the finest patent leveled sheet brass, the whole top being covered, and all division strips and surrounding rim are of square brass tubing secured with screws from the under side, providing a smooth all-brass top. The zinc lined top contains over fifty pounds of heavy sheet zinc. Both brass and zinc are of the same quality and thickness as used in regular column galleys. The dimensions are: length over all, eight feet; depth, twenty-seven inches; height, at front, three feet; height, at back, three feet ten inches.

Size of letter boards is twenty-four by thirty and one-half inches inside.

This standing galley can be furnished with ten letter boards twenty-four by twenty-one inches inside, in place of the galley rack, without change in price. Triple-column brass-lined galleys to fit galley racks, size eight and one-quarter by twenty-three and one-quarter inches inside, $3.25 each, list.

Space will not permit of the description and illustration of the many designs of Standing Galleys with Letter Boards handled by the American Type Founders Company. It is in a position to meet every possible requirement and to supply Standing Galleys with Letter Boards in a variety of styles, and other printers' requisites, with promptness and despatch.

The American Type Founders Company carries the largest line of Printers' Supplies and also gives the best service because it is the largest concern in the world dealing in type, printers' machinery and supplies, and has conveniently located selling houses ready to receive your orders and fill them with the least possible delay and at the right prices.

Hardwood Letter Boards

These can be supplied with or without cabinets. The boards are of standard size and will fit any regular case stand or rack for standard size type cases. No. 1 is the same length as a two-thirds size case. No. 2 is the same length as a three-quarter size case. No. 3 is the same length as a full size case. They are made of the finest selected hardwood with retaining rims on three sides. The open side is lipped to receive the galley. The boards are made to provide for contraction and expansion. Climatic changes do not affect them. Boards can be ordered singly or in lots and will always be found uniform in size. No feature of modern printing office equipment has undergone a larger development than letter boards. For the convenience of customers who have no stand room for the accommodation of these boards they can be listed with cabinets to hold sixteen boards at the prices shown in the following table:

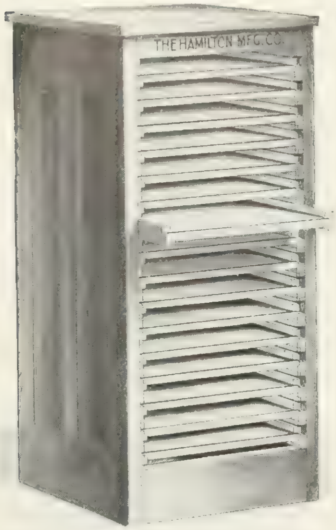
Handy Letter Board Cabinets

It is seldom that the composing room is equipped with sufficient letter boards to properly provide for the standing matter which must necessarily be kept alive. In many cases makeshift boards are stacked up in some corner of the workroom, which in a way answer the purpose, but do not provide properly for the type forms. The Handy Letter Board Cabinets are made purposely to provide ample space and to take excellent care of the type. They also permit one to readily get at the page or form required with the very smallest effort and in the quickest possible time. The Cabinets and boards may be numbered and indexed at slight cost, thus enabling one to keep track of the work in a systematic manner. The American Type Founders Company offers the printer a sufficient variety to meet the requirements of any office, but in case you do not find illustrated exactly what you want, we invite you to correspond with us and we will do our best to fill your wishes.



No. 27 Handy Letter Board Cabinet with Sixteen Hardwood Letter Boards

For job work these small Handy Letter Board Cabinets are unrivaled. Nos. 25, 26 and 27, in single tier, occupy floor space of sixteen and one-half by nineteen inches, and are filled with letter boards constructed of hardwood throughout. The sides of the Cabinets are tastefully paneled and all exterior surfaces are finished and varnished like the best type cabinets. The letter boards are lipped at the front to receive the galleys and have retaining walls at the ends and back to hold the type forms. Cabinets have hardwood tops and are made with closed backs.

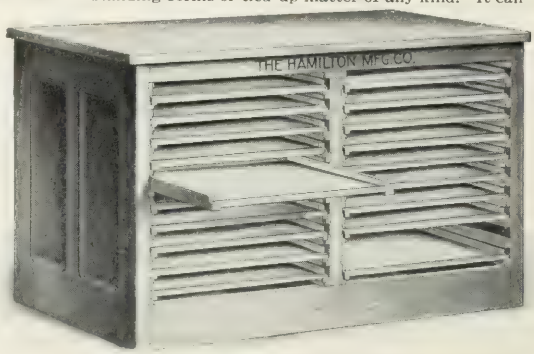
Other sizes containing any number of standard size Handy Letter Boards built to order.

Letter Board Cabinets

The No. 20 Cabinet is the most valuable storage cabinet for a job office having continually on hand a large number of standing forms or tied-up matter of any kind. It can also be utilized for the storage of electros, plated matter, etc. The top of the cabinet being only thirty-six inches from the floor, makes a convenient working table. The construction is entirely of hardwood, the ends are paneled, with edges tastefully moulded. All exterior surfaces are varnished and finished in a first-class manner. The letter boards are lipped at the front to receive the galleys, and in size are the same as the boards put into the standard Handy Letter Board Cabinets listed above.

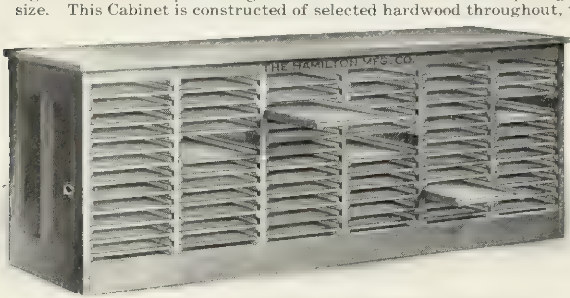


No. 21 Letter Board Cabinet complete with Twenty Hardwood Letter Boards

If you are desirous of reducing the cost of labor in your composing room, one of these Letter Boards will materially assist you.

The No. 21 is a good, medium-sized Letter Board Cabinet, which provides sixty-six square feet of letter board surface. It is constructed of selected hardwoods, firmly glued and bolted. The ends are paneled, with moulded edges. All exterior surfaces are nicely finished. Cabinet has closed back and hardwood top, which can be used as a working surface. Contains twenty standard letter boards, size No. 2, which are lipped at the front to receive the galleys and have retaining walls at the sides and back.

A compact and convenient storage cabinet is the No. 22 Letter Board Cabinet. It is used for tied-up forms and standing matter. The top is no higher from the floor than most imposing frames, and it provides a convenient working surface of large size. This Cabinet is constructed of selected hardwood throughout, with paneled ends, and closed back. Letter boards are lipped at the front to receive the brass galleys, and have retaining walls at the ends and back. Contains thirty-six standard size No. 3 letter boards, providing one hundred and forty-seven square feet of letter board surface.



No. 20 Letter Board Cabinet complete with Seventy-two Hardwood Letter Boards

A large and compact storage cabinet for standing forms is the No. 23 Letter Board Cabinet. It occupies comparatively little space, but provides one hundred and seventy square feet of letter board surface. It is constructed of selected hardwood throughout, and the ends are paneled with moulded edges. All exterior surfaces are varnished and finished like the best grades of cabinets. The letter boards are lipped at the front to receive the brass galleys and have retaining walls at the ends and back. This Cabinet contains sixty-four standard size No. 1 letter boards.

The No. 24 Cabinet is the most compact of all letter board cabinets. It occupies but seventeen and a half square feet of floor space and provides one hundred and ninety-five square feet of letter board surface. This large storage capacity is obtained by using heavy angle steel runs, which allow all space to be utilized without waste. The frame is substantially constructed of hardwood throughout, strongly bolted, and will carry an immense load safely. Letter boards are of selected hardwood, lipped at the front to receive the galleys and made with retaining walls at the ends and back. The ends of the Cabinet are paneled, and tastefully moulded on the edges. All exterior surfaces are varnished and nicely finished, like the best of cabinets. Made with a heavy hardwood top and closed back.

On account of the limited space allotted to Letter Board Cabinets we are unable to show illustrations of No. 22 and No. 24. We shall be pleased to send to any one interested a catalogue showing the complete line.

Tympan-Paper Cabinets

A suitable receptacle for the flat storage of proper tympan stock cut to sizes. Such stock should be of hard pressboard, cardboard, and filler stock in various grades, to use under the draw-sheet. A pressman without proper tympan stock cut to size and kept conveniently arranged in a cabinet must first search for a suitable draw-sheet, and after he has found that, he must search again for suitable slip-sheet material, which must be cut to size with much loss of time and waste of stock. All this waste can be saved when he has a suitable stock of tympan paper in proper grades, cut to size. The individual units are made in proper size for stock to fit standard eight by twelve, ten by fifteen and fourteen and one-half by twenty-two presses. Intermediate sizes can be accommodated in the same units. The lower shelf in any unit is for the draw sheets, which are usually the length of the bed of the press and cut three inches wider than the slip-sheet. The three upper shelves in each unit are for different grades and thicknesses of paper for slip-sheets, which should be cut in proper size to fit the bed of the press. Units can be arranged in pyramid form or a unit can be used separately and placed near the particular press in connection with which it is to be used. The units and the base are listed separately, and as many units of each size can be ordered as will be required to provide for the press outfit. The base is provided with a gauge-pin drawer. This base can be conveniently used in connection with units when arranged in pyramidal form. An illustration of this Cabinet will be sent upon request.

List Prices and Dimensions of Tympan-Paper Cabinets

UNIT NO. 1—Size outside, 16 inches long, 18 inches deep, 11½ inches high. Has three compartments 14½x8 inches inside for slip-sheets, and one compartment 14½x11 inches inside for draw-sheets. Weight, 35 pounds. List price $4 00
UNIT NO. 2—Size outside, 19 inches long, 18 inches deep, 11½ inches high. Has three compartments 17½x10½ inches inside for slip-sheets, and one compartment 17½x13 inches inside for draw-sheets. Weight, 45 pounds. List price 5 00
UNIT NO. 3—Size outside, 26 inches long, 18 inches deep, 11½ inches high. Has three compartments 24½x14½ inches inside for slip-sheets, and one compartment 24½x17½ inches inside for draw-sheets. Weight, 60 pounds. List price 6 50
BASE—Occupies floor space 18½x27½ inches; height, 6 inches; fitted with drawer for gauge pins, divided into 36 compartments, 2 inches square. Weight, 50 pounds. List price 6 00

Pressman's Register Cabinet No. 1.

Pressman's Register Cabinets

For testing the register on sheets printed in two or more colors, these Cabinets offer an economical and convenient arrangement. The top is of heavy plate glass, with compartment under glass, finished in white enamel. The light reflectors in the bottom of this compartment are thrown upwards, throwing a strong white light through the sheets when laid on the plate glass to determine the register. The rim surrounding the glass is raised about one-eighth of an inch and serves as a stop for the sheets, when being tested.

When not in use as a register cabinet, the top can be utilized as a most convenient working table. All cabinets are made of hardwood.

List Prices and Dimensions

PRESSMAN'S REGISTER CABINET NO. 1. Occupies ground space 30x44 inches; height from floor to plate glass, 32 inches. Size of plate glass top, 28½x42½ inches. Thickness of glass 5-16 inch. Three lights are fitted in the light compartment, in triangular form, wired and complete with reflectors. Light compartment is finished in white enamel. Top is removable, thus providing ready access. Shipping weight, 325 pounds. List price . . $50 00

PRESSMAN'S REGISTER CABINET NO. 2. Occupies ground space 32x44 inches; height, from floor to plate glass, 32 inches. Size of plate glass top, and thickness of glass, same as Cabinet No. 1. The base contains four drawers, 17¾x28¼x3¾ inches inside, and one drawer 36½x28¼x3¾ inches inside. Lights and finish of interior, same as No. 1. Access to light compartment is provided by sliding doors on each side. Approximate shipping weight, 425 pounds. List price $80 00

American Drying Rack and Stock Table

Economy of space, material and time is essential, and the idea of combining the drying rack with the stock table effects a saving alone of nearly fifty per cent. The storage of printed sheets in small lifts avoids back setting and smutting, and all work is thoroughly protected while drying. Further economy is effected by dispensing with excessive handling and bringing the whole drying arrangement close to the job presses.

The American Drying Rack and Stock Table will take care of the work turned out on several job presses, as the dryers run through the frame and can be pulled out from either side. The frame is raised three inches from the floor, providing additional ventilation and ensuring cleanliness.

Contains twenty-four dryers in two tiers, twelve in each tier. The dryers are thirty by thirty inches by one and one-half inches deep, inside measure. There is a clearance of two inches between dryers, providing ample ventilation. All dryers pull from either side. Pulls attached on both fronts. The bottoms of dryers are made of strips one and five-eighths inches wide, three-eighths of an inch thick, spaced one and five-eighths inches apart and will carry any load placed on them.

American Drying Rack and Stock Table

Dimensions, Weight and Price

Occupies floor space, 32x69 inches; height, 40 inches; weight, crated for shipment, 480 pounds.
List price $56 00

Labor-Saving Cabinets and Racks for the Composing Room

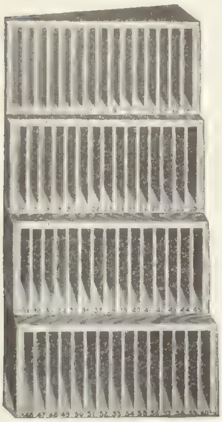
There is an increasing demand for labor-saving devices for the composing room and we therefore illustrate on this page a variety of very useful and convenient Lead and Slug Racks, as well as a splendid Metal Furniture Cabinet. Our Lead and Slug Racks will be found great time-savers when properly distributed in convenient places throughout the composing room. Some offices use as many as eight racks and compositors are never obliged to walk more than a few feet to obtain their leads and slugs.

Metal Furniture Cabinet

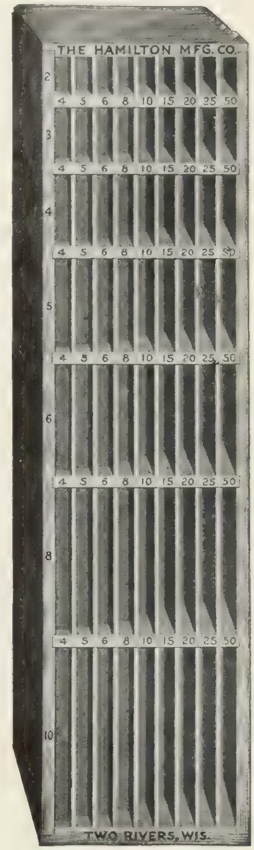
This rack has a double face and has been designed to hold a large quantity of metal furniture in a compact form and at the same time allow free access to every size. Every printer knows how readily metal furniture can be damaged. The use of this rack will prove economical as it will greatly prolong the life of metal furniture. Having the double face it can be filled from both sides. It has two compartments for each length and width, one on each side of the cabinet. Each compartment holds sixteen pieces arranged in two tiers, stacked eight pieces high, giving a total capacity of over three hundred pounds of metal furniture. Each compartment is numbered for easy reference.

Description and List Price

The size of this rack is 15¾ inches wide, 9 inches deep and 4 feet 10 inches long, outside dimensions. Weight crated, 75 pounds. List price **$12 00**



Boston Lead Rack



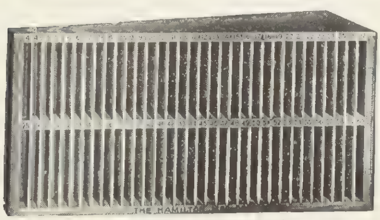
Metal Furniture Cabinet

Boston Lead Rack

Made in four sections, which are sold separately, if desired. The different lengths which go in each section are stamped at the bottom of each compartment, as shown in cut. A line-gauge for determining lengths is attached to each section. The four sections accommodate lengths from four to seven, varying by ens, and from seven to sixty, varying by ems. Compare the space occupied by these racks with that now taken up by your leads and slugs.

Wisconsin Lead Racks

They commend themselves to practical printers as being common-sense and in which leads will not pi. These are made in a superior solid style, and each compartment is numbered very plainly. A line-gauge rule is attached to every Lead Rack to assist the workman in determining lengths, while distributing leads.



Two-Tier Wisconsin Lead Rack

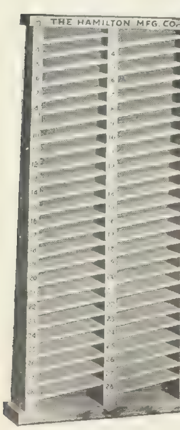
Two-Tier Wisconsin Rack

In this rack leads and slugs lie flat and will not pi. (In racks where leads are placed on edge pi inevitably results.) There are compartments to take leads from four to twelve and one-half ems (varying by ens), and from thirteen to sixty ems (varying by ems), the lengths being stamped over each compartment. The rack is solidly built. Compartments are eight inches high. Will hold seven hundred and fifty pounds of leads and slugs. Weight, forty pounds.

Four-Tier Wisconsin Rack

Has two compartments each for all sizes in the two-tier rack described above, and is similar in design and construction. One compartment of each size may be used for leads and the other for slugs or reglet. Will hold fifteen hundred pounds of leads and slugs. A font of labor-saving reglet to fill this rack, consists of twelve hundred yards, cut into nine thousand, one hundred and eight pieces, forty-six pieces of pica and ninety-two pieces of nonpareil of each of the sixty-six different lengths. Weight, eighty pounds.

Eureka Lead Rack



Eureka Lead Rack

Substantially constructed in two sections, each section holds lengths from four to twenty-eight ems, varying by single ems. One section may be used for leads and the other for slugs. The partitions in this rack are placed on an incline to prevent the leads and slugs from falling. These partitions are also inclined backwards, so that the material cannot be easily thrown from the case by a slight jar. The Eureka Lead Rack is essentially a space-economizing and labor-saving device. It differs in many particulars from other lead and slug racks and offers superior advantages both in construction and details of workmanship. Racks of this description assist materially in insuring order in a printing office and their use obviates all danger of the leads becoming pied. The compartments are all numbered and the Rack is solidly built. The fact that the partitions are placed on an incline is an advantageous feature of the Eureka Rack. Weight, eleven and one-half pounds.

The American Type Founders Company is always prepared to fully equip printing offices with all the latest devices for expediting work and effecting economies. The services of its experts are at the disposal of those desiring them and as their experience is wide and varied they are in a position to tender advice, which if adopted is bound to achieve the best possible results. If in this list you do not see just what you desire, write us and we shall be happy to assist you in any way we possibly can to attain satisfaction.

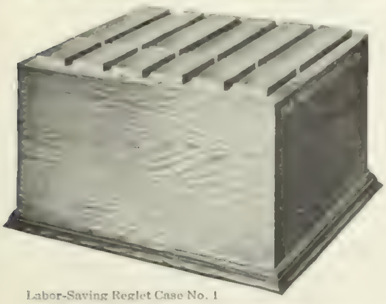
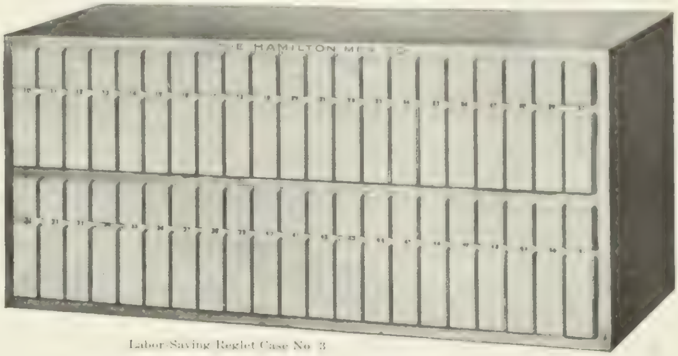
For prices of Labor-Saving Metal Leads and Slugs, see page 1222. For price list of Labor-Saving Reglet, see page 1267.

Labor-Saving Reglet Cases

The use of Labor-Saving Reglet results in a great economy of time and material. A calculation based on the cost of Reglet in yard lengths will demonstrate that our Reglet Cases secure these savings to printers at *no advance in price* for Reglet, and most moderate charges for the Cases. The best and most accurate oil-soaked Reglet is used and each Case contains equal proportions of nonpareil and pica. No Reglet is wasted when these Cases are used, as each piece is returned to its place in the Case after use The Case can be refilled at a moderate cost.

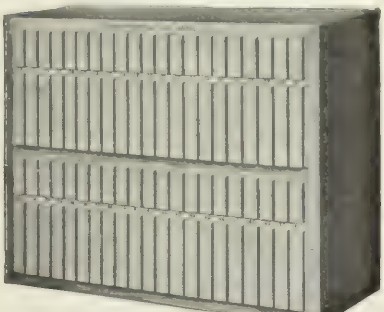


Labor-Saving Reglet Case No. 1



Labor-Saving Reglet Case No. 3

The Cases are made of selected hardwood and finished in antique oak, of fine appearance and substantial build. We put a line gauge on each Case and the different lengths are stamped on edges of all Cases over each compartment, so there will be no difficulty in replacing the Reglet in the several compartments after use.



Labor-Saving Reglet Case No. 4

The several Labor Saving Reglet Cases carried by us are made up according to the schemes given below and sold at the prices listed on this page.

Reglet Case No. 1 contains 1800 pieces (300 yards) of the best Reglet, half pica and half nonpareil, 300 pieces each of 10, 20, 30, 40, 50 and 60 ems long.

Refilling No. 1 Reglet Case, the same assortment as the above. List price, (reglet only) **$6.00.**

Reglet Case No. 2 contains 2400 pieces (560 yards) half pica and half nonpareil, 300 pieces each of 10, 20, 30, 40, 50, 60, 72 and 120 ems long.

Refilling No. 2 Reglet Case, the same assortment as the above. List price (reglet only) **$12.00.**

Reglet Case No. 3 contains 4200 pieces (600 yards) half pica and half nonpareil, in lengths from 10 to 51 ems, varying by one pica only, 100 pieces of each length. Height, 16½ inches; length, 35½ inches; depth, 9½ inches.

Refilling No. 3 Reglet Case, the same assortment as the above. List price (reglet only) **$11.00.**

Reglet Case No. 4 contains 2100 pieces (300 yards) one-half the amount in No. 3; same lengths, from 10 to 51 ems, varying by picas, 50 pieces of each length. Height, 16½ inches; length, 20¾ inches; depth, 9½ inches.

Refilling No. 4 Reglet Case, the same assortment as the above. List price (reglet only) **$5.50.**

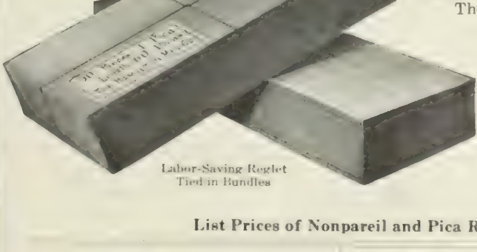
For prices and sizes of Reglet and Furniture in Yard Lengths see page 1230.

List Prices of All Reglet Cases

Description of Reglet Cases	Dimensions of Case, Inches: Height	Length	Depth	Case and Reglet	Weight Pounds	Reglet Only	Weight Pounds
No. 1 contains 300 yards, cut into 1800 pieces, 10 to 60 picas	10½	16⅝	15	$10 00	62	$ 6 00	30
No. 2 contains 560 yards, cut into 2400 pieces, 10 to 120 picas	20½	21¾	15	18 00	120	12 00	60
No. 3 contains 600 yards, cut into 4200 pieces, 10 to 51 picas	16½	35½	9½	18 00	110	11 00	60
No. 4 contains 300 yards, cut into 2100 pieces, 10 to 51 picas	16½	20¾	9½	11 00	62	5 50	30
No. 5 contains 1550 yards, cut into 6200 pieces, 10 to 150 picas	16½	53¼	26	45 00	275	30 00	150
No. 6 contains 775 yards, cut into 3100 pieces, 10 to 150 picas	16½	31	26	27 00	175	15 00	75

A line gauge, graduated by picas, with a stop at the end, is attached to every Case, for convenience in determining lengths while replacing Reglet.

Labor Saving Reglet



Labor-Saving Reglet Tied in Bundles

For the convenience of those who wish to replace the most used lengths in their Reglet Cases, and for those who require large amounts of certain lengths, we list below nonpareil and pica Reglet in hundred piece lots, cut to picas and tied in bundles.

Thoroughly kiln-dried stock is used in the manufacture of our Reglet and Wood Furniture, and it is made on machines especially designed for this purpose, consequently it has a well deserved reputation for accuracy and smoothness. It is all cut to point standard, and will be found entirely satisfactory in that respect. Thousands upon thousands of yards of reglet and furniture are used annually, yet a printing office rarely ever has enough pieces of the desired lengths. It now becomes an easy matter for our customers to keep their reglet cases sorted up in good shape at very small cost.

The American Type Founders Company is always in the lead with new ideas of practical value to the printer. A careful perusal of this catalogue will confirm our claims that we can supply "everything for the printer" on short notice.

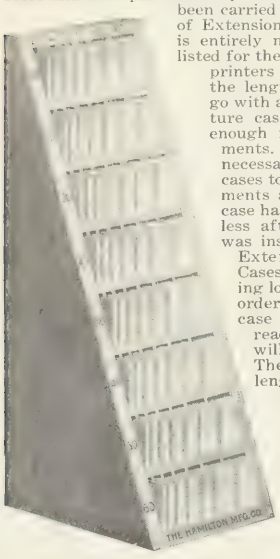
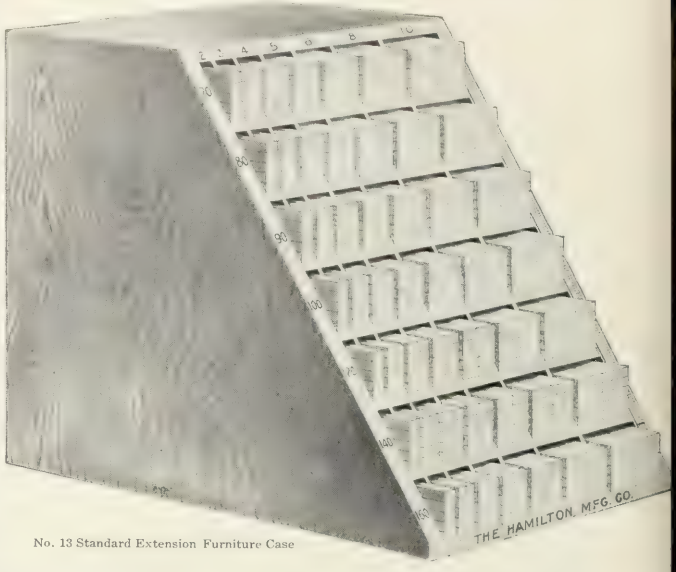
Labor Saving Furniture Cases

Experience in building Printing Office Furniture has shown that the most convenient form of furniture case is one without doors and with partitions separating the various widths and lengths. In designing this new line of Furniture Cases this idea has been carried out. The feature of Extension Furniture Cases is entirely new and is here listed for the first time. Many printers have found that the lengths which usually go with an ordinary furniture case are not long enough for all requirements. Thus it has been necessary to make special cases to meet the requirements and often the old case has been found useless after the new case was installed. With the Extension Furniture Cases a printer requiring longer lengths can order the companion case to the one he already has and the two will work together. The case with shorter lengths can be set on top of the one with the longer lengths. The two cases combined make practically one complete furniture case.

All furniture which goes into these cases is cut from carefully selected stock, thoroughly seasoned and oil-soaked. With special machinery a furniture has been produced, which is smoothly finished, accurate and uniform.



No. 10 Midget Furniture Case

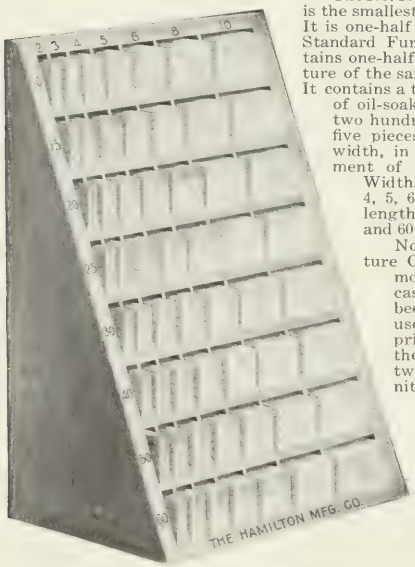


No. 13 Standard Extension Furniture Case

The No. 10 Midget Furniture Case is the smallest of all furniture cases. It is one-half the size of the No. 12 Standard Furniture Case, and contains one-half the amount of furniture of the same assortment.

It contains a total of forty-two yards of oil-soaked furniture, cut into two hundred and eighty pieces, five pieces of each length and width, in the following assortment of lengths and widths: Widths, five pieces each 2, 3, 4, 5, 6, 8 and 10 line picas; lengths 10, 15, 20, 25, 30, 40, 50 and 60 picas.

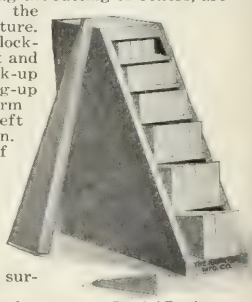
No. 12 Standard Furniture Case is the most commonly used furniture case. For many years has been the standard pattern used in ordinary country printing offices. It is twice the size and contains twice the amount of furniture in a No. 10 Midget Furniture Case, is one-half the size and contains one-half the amount of furniture in a No. 14 Double Standard Furniture Case. Contains a total of eighty-four yards of oil-soaked furniture, cut into five hundred and sixty pieces there being ten pieces, of each length and width in the following assortment: Widths, 3, 4, 5, 6, 8 and 10 line picas; lengths, 10, 15, 20, 25, 30, 40, 50 and 60 picas.



No. 12 Standard Furniture Case

Sengbusch Beveled Furniture

The difficulty in locking up forms which contain long vertical rules, and obtaining an even distribution of ink, as well as preventing the cutting of rollers, are obviated by the use of the Sengbusch Beveled Furniture. It is a time economizer in locking up a form on a slant and still maintain a square lock-up in the chase. In locking-up with this furniture, the form is inclined towards the left lower corner of the platen. This assists the feeding of the sheet. The Sengbusch Furniture throws the rules out of perpendicular; the point of contact is spread longitudinally, thus preventing cutting of the rollers and providing a better inking surface.



Sengbusch Beveled Furniture

Each font of Sengbusch Furniture consists of twenty-four pieces, four pieces each of the following lengths: 20, 25, 30, 40, 50 and 60 picas. All pieces are two picas wide on the narrow end and of varying widths on the wide end of each.

List Price of Sengbusch Beveled Furniture

Per font of 24 pieces, including cabinet **$2 00**

No. 13 Standard Extension Furniture Case is a companion piece to the No. 12 Standard Furniture Case, but containing longer lengths. This case is twice the size and contains twice the amount of furniture in a No. 11 Midget Extension Furniture Case, and one-half the size and contains one-half the amount of furniture in a No. 15 Double Standard Extension Furniture Case. Contains a total of two hundred and fifty-two yards of oil-soaked furniture cut into four hundred and ninety pieces, ten pieces of each length and width, in the following assortment: Widths, 2, 3, 4, 5, 6, 8 and 10 line picas. Lengths, 70, 80, 90, 100, 120, 140 and 160 picas.

No. 17 Mammoth Furniture Case. This is a most popular and much used case, probably the best all-around furniture case ever designed. It contains a wide variety of lengths and widths, properly assorted for general use. It contains a total of four hundred and eighty yards of oil-soaked furniture, cut into fifteen hundred and thirty pieces in the following assortment: Eighteen pieces each of two, three and four line wide in the following lengths: 10, 15, 20, 25, 30, 40, 50, 60, 70, 80, 90, 100, 120, 140 and 160 picas.

Fifteen pieces each of five and six line wide, in the following lengths: 10, 15, 20, 25, 30, 40, 50, 60, 70, 80, 90, 100, 120, 140 and 160 picas.

Nine pieces each of eight and ten line wide, in the following lengths: 10, 15, 20, 25, 30, 40, 50, 60, 70, 80, 90, 100, 120, 140 and 160 picas.

We shall be pleased to give you information regarding Labor Saving Furniture Cabinets not shown here

Pyramid Lead and Slug Bank

The most practical Lead and Slug Bank ever devised. It has a double-faced sloping top, divided into sections, each section adjustable, so as to accommodate any desired lengths. There is also provided a series of drawers, between the sloping banks, for the storage of surplus stock of leads and slugs. The working bank can be replenished from this stock as the occasion requires.

The Sort Drawer Base serves to raise the Lead and Slug Bank to a convenient working height. This Bank and Base are most substantially constructed of hardwood throughout, so as to carry safely the immense load of metal, approximately 8,000 pounds, which it is designed to hold.

No. 1 Pyramid Lead and Slug Bank

All space inside and outside is utilized to the very best advantage.

The space-saving qualities of this piece of furniture will be appreciated when it is considered that the floor space occupied is only a little more than twelve square feet.

Lead and Slug Bank.—In the No. 1 Bank there are twelve sections on each side, providing a total of seventy-five square feet of lead and slug surface, when the metal is stacked double depth, each section supplied with a number of adjustable partitions which can be so placed as to accommodate any length of leads and slugs. In the ends, between the sloping banks, is a series of ten storage drawers, five in each end, all 27 inches long, 4¾ inches deep, inside measure, and of varying widths, 3⅞, 6½, 9, 11¾ and 14½ inches respectively. Thirty-five hundred pounds of leads and slugs can be stored in these ten drawers.

Sort Drawer Base.—This Base contains a total of twenty-four sort drawers, each divided into ten compartments; size of each compartment 4⅝x4x2½ inches inside. These drawers run through the bank and can be pulled from either side.

Dimensions, Weights and Capacity

Height, without base, 48 inches; base, 18 inches; total height, bank and base, 66 inches. Occupies floor space, 25½x72 inches. Depth of Lead and Slug Bank, 1½ inches, inside. Capacity, leads and slugs, on bank, 3,000 pounds. Capacity, leads and slugs, in drawers, 3,500 pounds. Capacity, Sort Drawer Base, 1,500 pounds. Weight of No. 1 Lead and Slug Bank, crated, 400 pounds. Weight of Sort Drawer Base for No. 1, crated, 300 pounds.

List Prices of Pyramid Lead and Slug Banks

No. 1, Lead and Slug Bank **$100 00**

No. 1, Sort Drawer Base . . . . . **$56 00** No. 2, Lead and Slug Bank . . . . . **$64 00** No. 2, Sort Drawer Base **36 00**

Note.—The No. 2 is just half the size of the No. 1, illustrated and described above. Double-faced with six sections in Lead and Slug Bank on each side, and with five drawers on the end running through and pulling from either end. Also with Sort Drawer Base containing twelve drawers in three tiers, pulling from either side. Capacity, one-half the amounts given for the No. 1.

Furneaux Storage Cabinet for Leads, Slugs and Metal Furniture

There has always existed a lack of storage room for leads and slugs, metal furniture, etc. Likewise the line of modernized Printing-office Furniture has lacked a convenient Lead and Slug Bank of large capacity. Both of these wants are supplied in the Furneaux Lead and Slug Bank and Storage Cabinet.

This equipment has given such great satisfaction and has proven its economical value so thoroughly, that we offer this Cabinet as a standard article to our customers. It has an enormous storage capacity and is most substantially constructed to support the great load of metal which it will accommodate.

Dimensions of the Furneaux Storage Cabinets

Occupies floor space, 36x26 inches; height at the front, 45 inches; height at back, 70 inches. The lower Lead and Slug Bank is two inches deep inside and divided into two sections, each section measuring 14¼ inches from front to back. The upper Lead and Slug Bank is 3¼ inches deep inside, and measures 13½ inches from front to back. These Lead and Slug Banks are adjustable by picas, and the divisions can be arranged to accommodate any desired lengths. The body of the Cabinet is fitted with twelve storage drawers, all eighteen inches long from front to back, and thirteen inches wide, inside measure. The two upper drawers are eight inches deep inside and the ten lower drawers are five inches deep inside. All these drawers have removable partitions, adjustable by inches, running from front to back. Cabinet is fitted with heavy flat steel runs, capable of sustaining any load which can be stored in the drawers. Weight of Cabinet, crated for shipment, 500 pounds.

List price **$85 00**

Furneaux Storage Cabinet.

Make-up Tables with Iron or Brass Imposing Surfaces

Make-up Tables are valuable in newspaper offices, where speed in getting ready is essential. They are fast coming into general use. They provide a place for every form without interfering with other imposing surfaces. The table and form can be quickly transferred to the stereotyping room. The iron tops are heavy and ribbed on the underside, which adds additional strength. The surfaces of the iron tops are smoothly and accurately finished. When brass covered, extra heavy, hard-rolled sheet brass is used, ten-gauge in thickness. The supporting posts of the frames fit into pockets cast into the iron top. This feature braces the frame and keeps the top always in correct position. Mounted on two-wheeled revolving castors of the most improved pattern. The drawer under the iron surface for column rules is subdivided into various compartments to keep the rule face up. The shelving underneath this drawer is useful for storage of galleys, furniture, sidesticks, tools, etc.

Make-up Table with Tray Attached

The Rule Tray on Top

The supplementary tray is attached to the table by means of a pair of supporting brackets. These brackets are detachable and the tray and brackets can be removed when the Make-up Table is transferred to the stereotyping room. This tray is full brass lined, the bottom being covered with heavy hard-rolled sheet brass. The surrounding rim and the heavy division bars are of square brass tubing. The various narrow divisions are also of brass tubing with rounded tops, like the slats in printers' type cases.

Bookbinders' Materials and Supplies

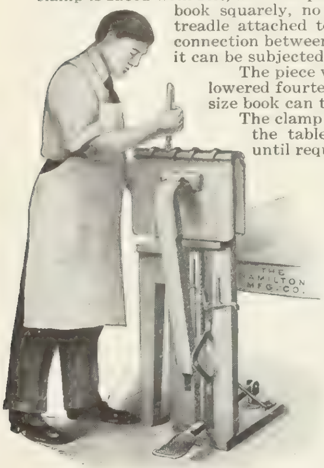
During the past few years many improvements and additions have been made in the tools and machinery used by Bookbinders. Recognizing this fact the American Type Founders Company is now in a position to supply its many customers promptly with the very best of everything in this especial line. Many of the machines and devices represented in the following pages are of exceptional merit and afford to any printer contemplating the addition of bookbinding to his equipment, a splendid line from which to make a choice selection. Should there be any device not specifically mentioned in this list, it will afford us pleasure to supply the fullest details and prices of same with the utmost despatch upon request. Our aim is to supply everything for the Bookbinder.

Stuart Finishing Stand

The Stuart Finishing Stand is far superior to the devices ordinarily used. It is made of oak and is very substantial. The clamp is faced with felt, and the part which presses against the book swings on a pivot so that it always strikes the cover of the book squarely, no matter what the thickness of the book may be. The clamp is closed by foot power with a treadle attached to a heavy coiled spring, and when closed is held in a fixed position by an iron ratchet. The connection between the treadle and the clamp is a heavy steel coiled wire which will stand any strain to which it can be subjected.

The piece which supports the book, is adjusted with a lever and ratchet and this supporting shelf can be lowered fourteen inches below the top of the clamp, or it can be raised to the lower edge of the clamp; any size book can therefore be placed conveniently in the clamp and no time is lost in making the adjustment.

The clamp can be easily adjusted to a table by two pins which drop into holes in the top of the table. When the table only is used, the clamp can be taken off and put away until required. The device is sold with or without the table, as desired.



Stuart Finishing Stand

List Price and Weight of Stuart Finishing Stand

Weight of clamp, 85 pounds, crated; weight of table, 75 pounds, crated;
List Price $12 00
Price of hardwood table with drawer 10 00

Roll Cloth Cutting Machine

The Roll Cloth Cutting Machine is a new apparatus for handling binders' cloth and cutting same to size with great convenience and without waste.

It will take six rolls of cloth in any length up to forty-two inches. The rolls of cloth are held on iron rods which are fitted in the uprights on the frame and are removable. The cloth from all of the rolls passes down to the bottom of the frame and under a pressure roll. It then passes along over the bed of the machine as shown in the illustration.

Roll Cloth Cutting Machine

There is a cutting groove across the bed, which is lined with steel on both sides. The knife used in cutting, slips in this slot between the pieces of steel and the cloth can be quickly and smoothly cut. There is a measuring gauge marked off in inches to enable the operator to gauge the sizes of cloth which he is cutting.

Directly in front of the cutting slot there is a heavy pressure roll of iron which holds the cloth down close to the bed of the machine. All parts of wood are hardwood, nicely fitted and varnished. The machine as a whole is well and substantially made.

List Price and Dimensions Roll Cloth Cutting Machine and Table

$44\frac{3}{8}$ inches wide; $41\frac{3}{8}$ inches long; thickness of bed, $2\frac{1}{4}$ inches; height of uprights, $18\frac{1}{2}$ inches; weight, crated for shipment, 160 pounds; weight of Table, crated ready for shipment, 75 pounds; length of bed from cutting groove to the gauges, 22 inches; size of Table, 40x43 inches. List Price, without Table $25 00

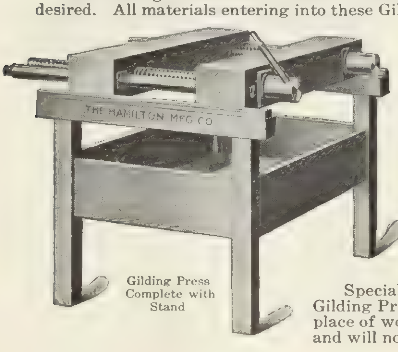
Gilding Presses

The Gilding Press is here shown combined with the Stand. We can supply it with or without the Stand or the Stand alone, as desired. All materials entering into these Gilding Presses is the best procurable. They are made of hardwood throughout except the screws, which are of iron. The boxes are of iron or gun metal as desired. The screws work easily and accurately. Lever bar accompanies each Press. The distance between screws is twenty-eight inches. The jaws can be spread eighteen inches. Special Presses with additional spread of jaw can be furnished at an advance of 50 cents per inch for the additional spread. All woodwork is nicely filled and varnished.



Gilding Press Complete with Stand

List Prices and Dimensions of Gilding Presses

No.	Length of Iron Screws Inches	Size of Screw Inches	Size of Wood Inches	Style of Box	Weight Pounds	Prices
1	35	$1\frac{3}{4}$	$5\frac{5}{8}$x$5\frac{5}{8}$	Iron Boxes	150	$36 00
2	35	$1\frac{3}{4}$	$5\frac{5}{8}$x$5\frac{5}{8}$	Gun Metal Boxes	150	40 00
3	36	2	$6\frac{3}{4}$x$5\frac{3}{4}$	Iron Boxes	200	44 00
4	36	2	$6\frac{3}{4}$x$5\frac{3}{4}$	Gun Metal Boxes	200	46 00

Prices of hardwood Stand, to fit any size, as shown in illustration, $11.00. Weight 100 pounds

Special attention is directed to an important improvement made in the construction of these Gilding Presses. The slide pins running parallel to the jaw screws are now made of steel in place of wood, as formerly. This imparts additional rigidity. The steel guide pins cannot bend and will not wear. These Gilding Presses are now all metal except the two jaw bars.

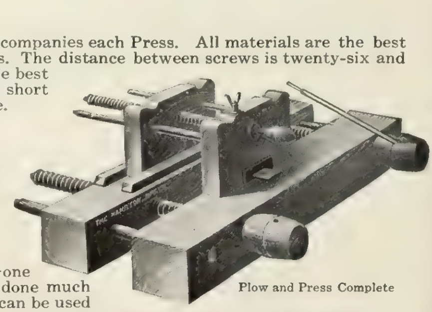
Plow and Press

This illustration shows the Plow and Press complete with lever bar, which accompanies each Press. All materials are the best procurable. The diameter of the wood screw is two and seven-sixteenth inches. The distance between screws is twenty-six and one-half inches. The jaws have a spread of twelve inches. The knife is of the best tool steel. All Plows are equipped with the English pattern knife. This knife is short and stocky and cannot spring. It is a great improvement over the old style knife.

List Prices of Plow and Press

Complete Plow, Press, Knife and Pin, $12 75
Plow alone 4 00
Knife alone 75
Press alone $9 00
Press Pin alone 75

Weight, complete, 130 pounds.



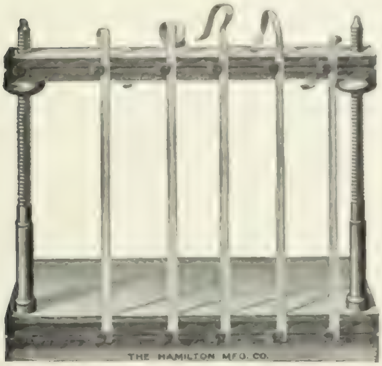
Plow and Press Complete

Bookbinders' Band and Rubbing-Up Sticks

Made of smoothly finished rock maple and put up in a set of six sizes—one each $\frac{3}{32}$, $\frac{4}{32}$, $\frac{5}{32}$, $\frac{6}{32}$, $\frac{7}{32}$, $\frac{8}{32}$-inch widths of groove. By their use the work is done much quicker and bands of uniform width and finish are formed. The two larger sizes can be used for forming the larger bands on the backs of blank books, turning sharp corners, etc., thus taking the place of the folder, rubbing-up stick, burnisher, etc., heretofore used for this purpose. Weight, per set, $\frac{3}{4}$ pound. Price, per set of six, in neat paper box, **$1.00.**

Blank Book Sewing Bench

This Blank Book Sewing Bench is a decided improvement over the usual construction of such articles. The screw clamps are of brass and work smoothly in the follower grooves. The screws are large with deep slotted heads. The uprights on these Benches are screwed into the bottom board. All screws are interchangeable with those in the regular Sewing Benches and are absolutely uniform in size.



Blank Book Sewing Bench

List Price and Dimensions Blank Book Sewing Bench

Weight, crated for shipment, 35 pounds $7 00

Bookbinders' Sewing Benches

These Sewing Benches and Finishing Presses are made in a strictly first-class way, of good material and thorough workmanship. The uprights are screwed to base and are detachable. The Screws are accurately cut from dies and are uniform and interchangeable. A broken or worn-out Screw can be replaced with the certain knowledge that it will fit.

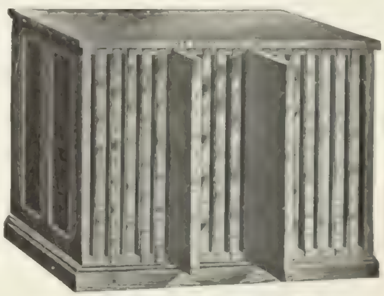
Bookbinders' Press Boards

This line of Bookbinders' Press Boards has been greatly developed, and is guaranteed, whether plain, laminated or brass bound, to be the best ever manufactured.

They are made of selected cherry, or of five-ply laminated stock as shown in the two illustrations below. The Laminated Brass Bound Boards are meeting with great favor, and are now used by the best and largest binders. All stock going into these boards is the very best procurable. Any little defect in the wood is firmly plugged and smoothed.



18 Brass Bound Press Boards in Cases

List Prices and Dimensions of Cases for Press Boards

The Cases for holding Press Boards are of three sizes, each size in 14, 16 and 18 board capacity. Other sizes made to order. These cases are made of hardwood, nicely finished, and the sides are paneled. The boards are separated by fixed hardwood strips. The prices of Cases given below do not include the Boards. Prices for the boards appear in the table below.

Case to hold 14 Boards 16x24 inches . . . . $ 9 50
Case to hold 16 Boards 16x24 inches 10 50
Case to hold 18 Boards 16x24 inches 11 50

Approximate weight of empty Case, 100 pounds.

Case to hold 14 Boards 18x24 inches $10 00
Case to hold 16 Boards 18x24 inches 11 00
Case to hold 18 Boards 18x24 inches 12 00

Approximate weight of empty Case, 120 pounds.

Case to hold 14 Boards 20x28 inches $11 00
Case to hold 16 Boards 20x28 inches 12 00
Case to hold 18 Boards 20x28 inches 13 00

Approximate weight of empty Case, 140 pounds

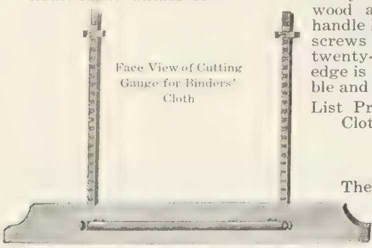
Cutting Gauge for Binders' Cloth

No satisfactory device for cutting Binders' Cloth has heretofore been on the market. Printers and binders have resorted to home-made affairs or used an ordinary straight edge. This Cutting Gauge will be found very useful. It is well made, of hardwood and cannot get out of order or become broken with ordinary usage. It has a raised handle bar twenty-four inches long. The cutting edge is faced with angle brass, fastened with screws from the under side. The arms are gauged by half-inches up to twenty-four inches. The length of the cutting edge is forty-two inches. The arms are detachable and fastened with screws. Weight, 4 pounds.



Face View of Cutting Gauge for Binders' Cloth

List Price of Cutting Gauge for Binders' Cloth **$4 00**

Finishing Stand

These Finishing Stands, Gold Cushions and Tables are strictly first-class and guaranteed to give perfect satisfaction. All materials are of the best procurable and every piece is carefully inspected before sent out. The Finishing Stand can be attached to the Table, as shown. Made of hardwood, with cleated ends.

24 inches long, 2½ inches wide, ⅜ inch thick, each **20**
36 inches long, 3 inches wide, ½ inch thick, each **$0 45**
48 inches long, 4 inches wide, ⅝ inch thick, each **60**

Other sizes at proportionate prices

Bookbinders' Cabinets

Made with bronzed pulls on each case, and highly finished. The cases are made in exactly the same style as printers' cases, with three-ply bottoms, are the same size and proportioned like one-half of the regular cap case. These Cabinets may be put on or under a bench. "A place for everything and everything in its place" is a rule bookbinders should live up to, and these Cabinets will enable them to do so.

No. 2 Bookbinders' Cabinet

List Prices of Bookbinders' Cabinets

No.	Capacity	Weight Pounds	Height Inches	Floor Space Inches	Price

6	25 Cases	250	61¾	20x20	**25 00**

Other sizes can be furnished at proportionate prices.

Paper and Card Stock Cabinets

This is a proper receptacle for high-priced papers and fancy cardboard stock. Such material quickly becomes soiled and unfit for high-grade work if exposed to the air and dirt. These Cabinets are practically dust proof and the colors will not fade or the quality of the paper deteriorate when stock is stored in them.

They are very strongly constructed to stand great weight and can be used for a variety of purposes. The bottoms are of heavy three-ply material, five-sixteenths of an inch thick, with the grain of the wood crossed. Such bottoms cannot shrink, swell or crack. All drawers are made with removable divisions so that each can be sub-divided for small sizes of cut stock when found desirable. Cabinets are made of hardwood throughout and nicely finished. The ends are paneled and bronze pulls are attached to the drawer fronts.

The prices quoted are subject to prevailing discounts. We make a great many Paper and Card Stock Cabinets to special measurements. If you require something out of the ordinary write us.

List Prices and Dimensions of Paper and Card Stock Cabinets

No. 1 contains 12 drawers; eight of these drawers are 2 inches deep inside; the other four are 4½ inches deep inside. Each drawer will take 22½x28 inch stock and smaller sizes. Occupies floor space 28½x34⅜ inches. Height, 48 inches. Weight, crated, 340 pounds. List price **$37 00**

No. 2 contains 12 drawers; eight of these drawers are 2 inches deep inside; the other four are 4½ inches deep inside. Each drawer will take 28x44 inch stock and smaller sizes. Occupies floor space 34½x49⅝ inches. Height, 48 inches. Weight, crated, 400 pounds. List price **48 00**

No. 1 Paper and Card Stock Cabinet
Takes full sheet of Cardboard (22½x28 inches). Occupies space of 34⅜x28½x48 inches

About the New Departure Type Cases

In order that customers may have little trouble in making their selections of type cases, the American Type Founders Company presents, in the following pages, many absolutely correct illustrations and much invaluable general information with regard to its extensive line of New Departure Type Cases. The list is very complete and we believe there is scarcely a type case, used to any extent, that is not represented in these pages. That there should be uniformity in the layout of all type cases is beyond any question of doubt and the large number of illustrations detailing many layouts should prove of the greatest assistance to printers.

As we carry at all times an extensive stock of the New Departure Cases, all orders will receive careful and very prompt attention. The prices quoted are subject to prevailing discounts.

While most printers are familiar with our line of Cases, the following descriptions and list prices may prove of service for general reference:

The leading feature of the New Departure Cases is the one piece bottom the full width of the case, without joints or splices. This is made of three layers of wood, the grain of the middle layer running in an opposite direction from the grain of the outer layers. This makes cracking impossible. The cases slide smoothly on side rails and not on the bottoms, with the screws forever catching. This feature lengthens the life of the cases. The bottom cannot be torn off, because it is rabbeted into the side rails and front. Made of thoroughly seasoned wood.

Section showing Triple Veneer Bottom

Paper Covered Bottoms

Another important feature in type case construction which improves and prolongs the life of each case is the fact that all of the New Departure Cases have three-ply bottoms covered with the best quality of manila paper. The paper absorbs the moisture from the type and prevents it entering the wood, dissolving the glue and destroying the case bottom.

Brass Clasp Cases

To add strength and make the cases practically indestructible at a very slight additional cost brass joint clasps are added. A long pin driven through and clinched holds the partition firmly to the bottom.

The paper covering of the New Departure Cases is a final process and is used because it improves and prolongs the life of the case. Twenty-five years' experience in manufacturing type cases has demonstrated that it is required. Since its introduction the New Departure style of type case has become practically the only construction known to printers, not only in the United States, but the whole of North America and every foreign country, where the art of printing has made material progress. It is safe to say that there is not a first-class printing office in the world, which is not equipped, in part at least, with New Departure Cases.

News Cap Case, $0 80

A new Cap Case that meets all requirements and one that is exceptionally popular with all compositors.

News Lower Case, $0 80

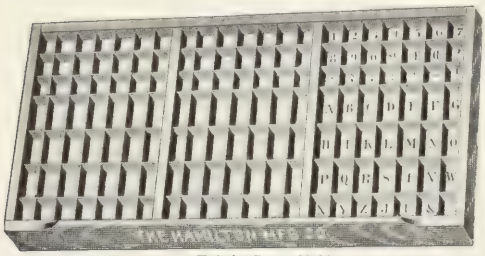
The universal layout as put into the regular Lower Case from which every printer has learned his a-b-c's.

California Job Case, $0 90

Most popular of all Job Cases. Note the large cap boxes. Used exclusively in all our type cabinets unless otherwise ordered.

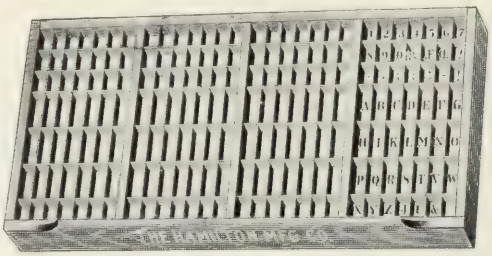
Italic Job Case, $0 90

Old standard Job Case, universally used before the introduction of the California Job Case. Convenient for fonts with accented letters.



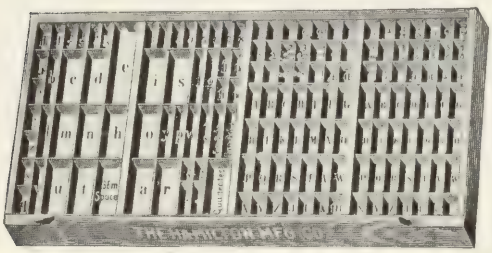
Triple Case, $0 90

A most useful and popular Case. Will take three fonts of caps, figures and points.



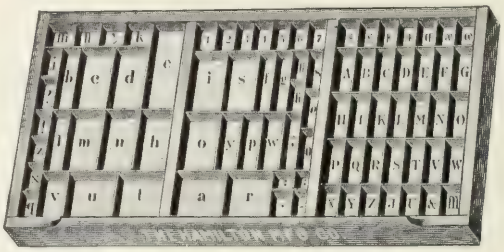
Quadruple Case, $1 20

Very useful for certain fonts. It is a double Cap Case. Holds four fonts caps, figures and points.



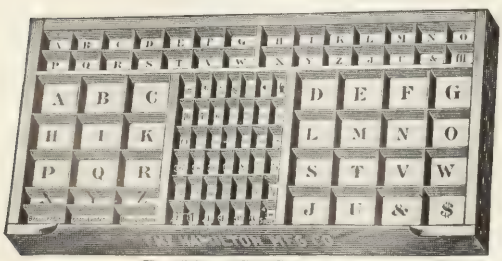
Improved Job Case, $1 20

The only Case combining all the boxes found in a regular pair of News Cases. Takes caps, small caps and lower case with figures.



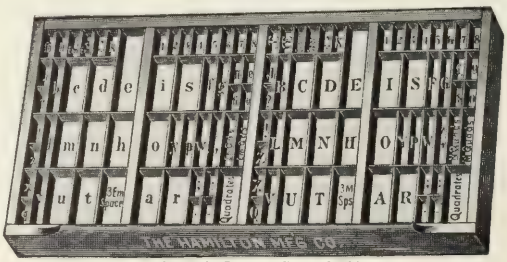
Spaceless Job Case, $1 00

The Spaceless Job Case should be a twin companion to the Space and Quad Case. All space and quad boxes omitted.



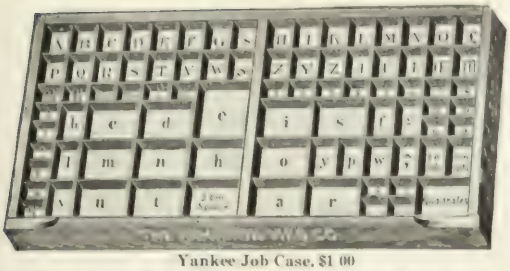
Two Rivers Cap Case, $0 90

A sensible Cap Case now coming into general use. Large cap boxes, 2¾x3 inches. Copy covers least used characters. Economical.



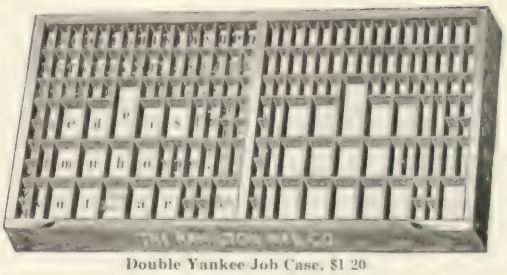
Double Lower Case, $1 20

For holding two fonts of caps and figures; or caps, lower case and double font of figures; or a font each of Roman and bold face.



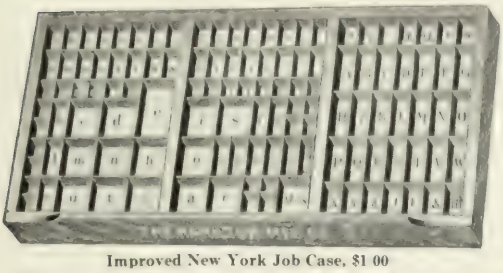
Yankee Job Case, $1 00

The cap boxes in this Case are placed at the back instead of the right side. A popular case in two-thirds and three-quarter sizes.



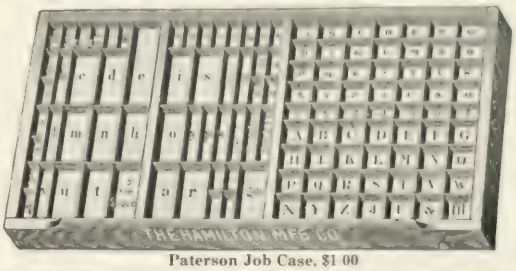
Double Yankee Job Case, $1 20

A very useful Case. Accommodates two complete fonts of caps, lower case, figures and points. Size of boxes allows ample finger room.



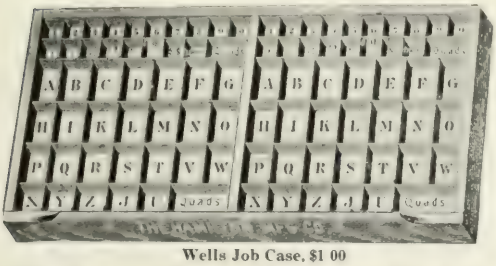
Improved New York Job Case, $1 00

Holds cap, small cap, lower case and figure fonts. Cap side California style with five rows of boxes.



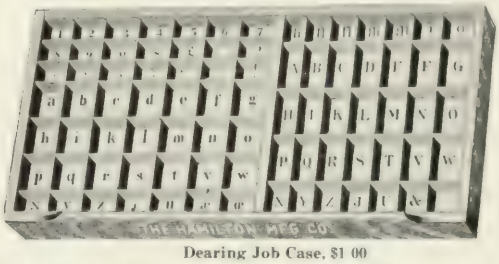
Paterson Job Case, $1 00

Like the New York Case, this is designed to hold cap, small cap, lower case and figure fonts.



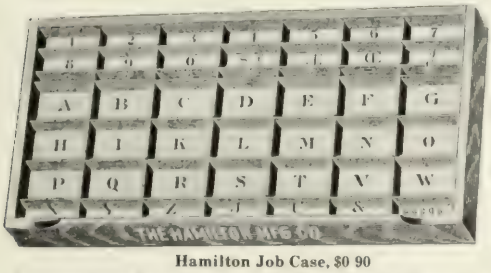
Wells Job Case, $1 00

Holds two fonts of caps and figures. Large boxes insuring large capacity. Cap boxes one-third larger than those in a News Case.



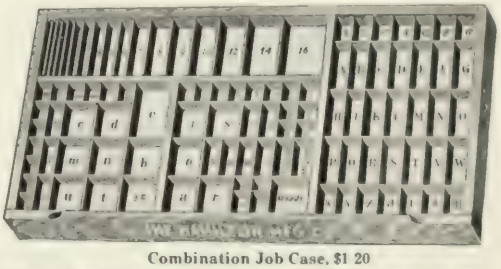
Dearing Job Case, $1 00

For large sizes of type. Has greater capacity than any other Job Case. Lower case boxes extra large. Cap side California pattern.



Hamilton Job Case, $0 90

Accommodates large sizes cap and figure fonts of metal type and small sizes of wood type. Holds one font caps, figures and points. Cap boxes 2¼x4⅝ inches.



Combination Job Case, $1 20

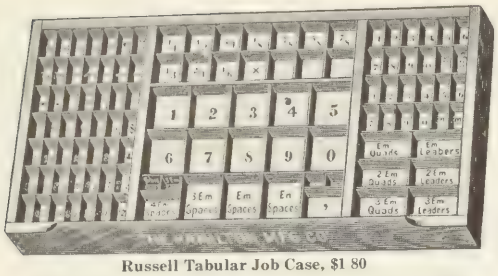
For use in legal blanks and similar work. Holds brass leaders from 1 to 16 ems, half ems from 1 to 5.

Dearing Accent Case, $1 50

Five sections for caps, small caps and lower case of Roman, and caps and lower case of Italic. Extra boxes at front for Spanish, French and Portuguese accents.

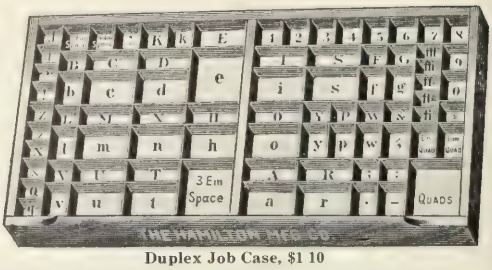
Wheeler Job Case, $0 90

Six rows of boxes on cap side. Extra large E box. Lower tier of cap boxes reduced to enlarge boxes for most used letters.



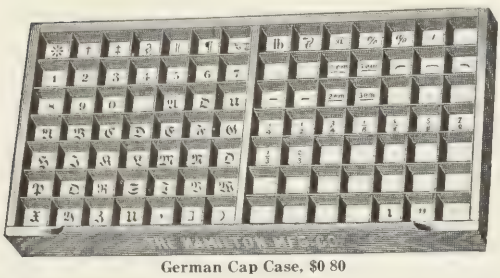
Russell Tabular Job Case, $1 80

Has separate series of boxes for odd characters and diacritical marks, brass rules and brass leaders, piece fractions, quads, spaces, fractions, etc.



Duplex Job Case, $1 10

Takes capital and lower case characters in adjoining boxes. Usual lower case layout in duplicate. Large cipher, period and hyphen boxes.

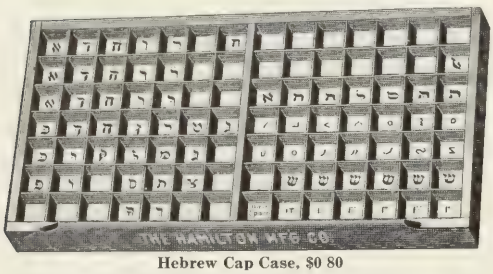


German Cap Case, $0 80

Same as the regular Cap Case. The illustration simply shows how the German characters should be laid.

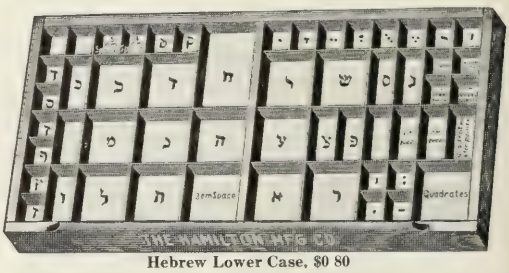
German Lower Case, $0 80

This Case is the same as the regular Lower Case with the exception of the double "s" boxes, as shown.



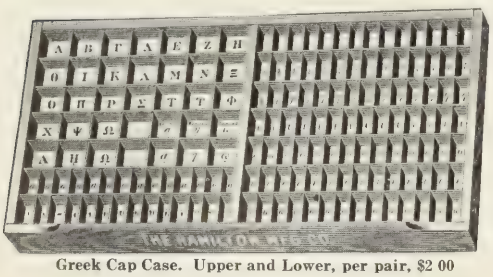
Hebrew Cap Case, $0 80

Same as the regular Cap Case. The illustration simply shows how the Hebrew characters should be laid.



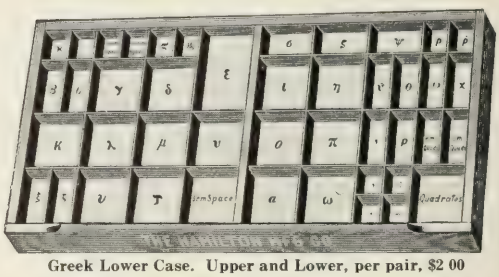
Hebrew Lower Case, $0 80

Same as the regular Lower Case. The illustration simply shows how the Hebrew characters should be laid.



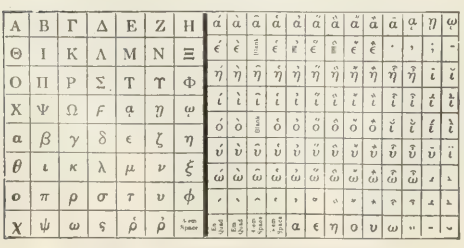
Greek Cap Case. Upper and Lower, per pair, $2 00

We are prepared to furnish Cases specially for foreign languages. Prices quoted on application.

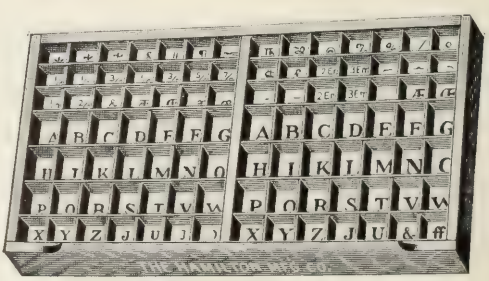


Greek Lower Case. Upper and Lower, per pair, $2 00

All these Cases are made after the New Departure style—the best that can be produced.

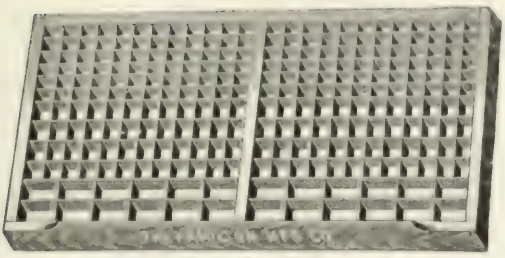


Porson Greek Case for Job Fonts, $2 00



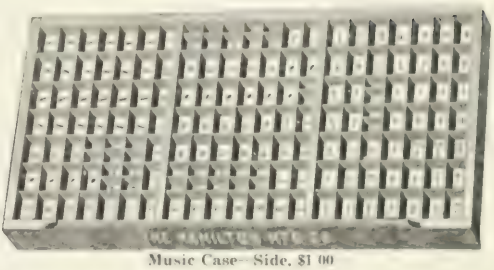
The Improved Cap Case

The new case has the regular arrangement of forty-nine compartments on each side of the center bar.

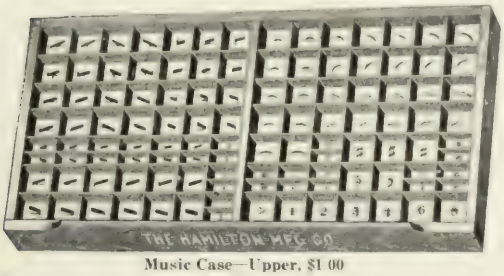


Border Case, $1 25

A roomy Case of large capacity for all sizes of borders.

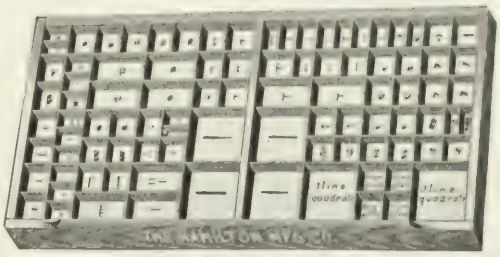


Music Case—Side, $1 00



Music Case—Upper, $1 00

Music compositors will find these illustrations of great service in laying type. If the lettering is not distinct use a hand glass.



Music Case—Lower, $1 00

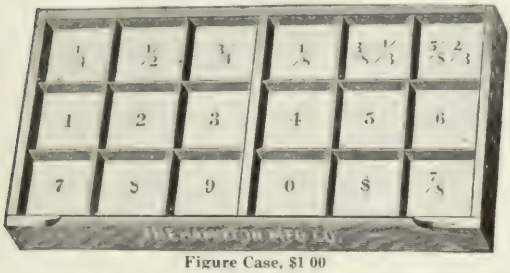


Figure Case, $1 00

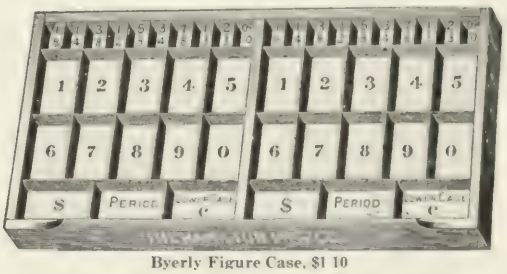
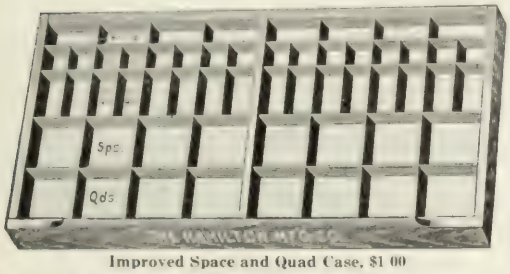
A necessity in every large office. Takes extra large supply of figures and fractions. Can be furnished double depth.



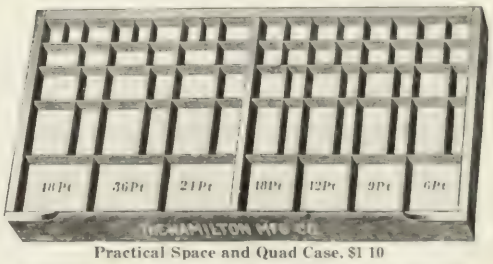
Byerly Figure Case, $1 10

An improved Figure Case of great value. Figure boxes $2\frac{3}{4}$x$4\frac{3}{4}$ inches. Fraction boxes $2\frac{1}{8}$x$1\frac{3}{8}$.



Improved Space and Quad Case, $1 00

A slight modification of the old Space and Quad Case which we no longer list. Furnished on all orders for regular Space and Quad Cases.



Practical Space and Quad Case, $1 10

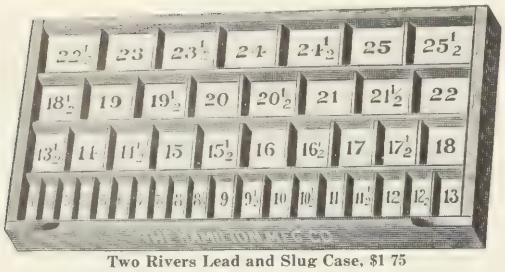
Provides for half-point and one-point spaces without the necessity of mixing. Accommodates seven sizes of spaces and quads.

No. 1 Adjustable Lead and Slug Case (single depth), $1 50

Can be adjusted by picas to meet any requirement, and furnished also in double depth, if desired.

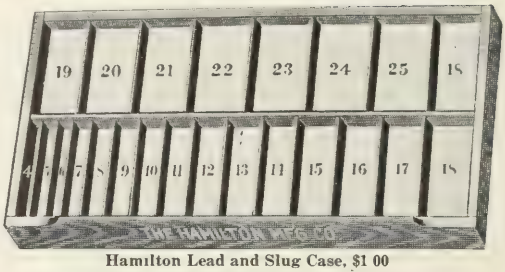
No. 2 Adjustable Lead and Slug Case (double depth), $2 50

The center bar adds both strength and utility. Furnished in either single or double depth as desired.



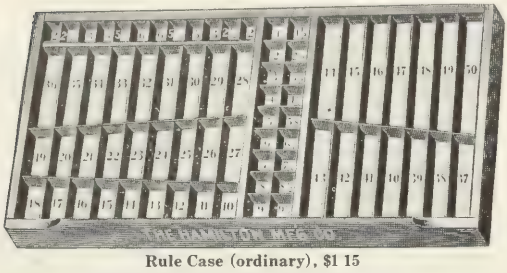
Two Rivers Lead and Slug Case, $1 75

A new and most valuable Case. Takes lengths from 4 to 25½ with variations by half picas.



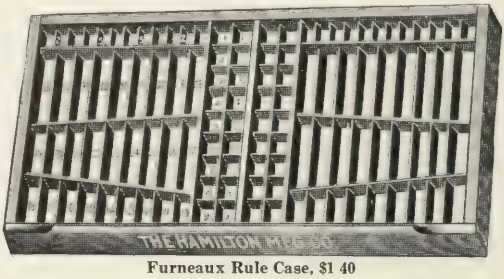
Hamilton Lead and Slug Case, $1 00

Leads and slugs can be stacked two tiers deep. Can be had in double depth, if desired.



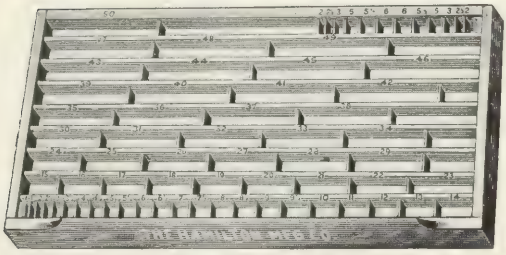
Rule Case (ordinary), $1 15

The old style full-sized Brass Rule Case.



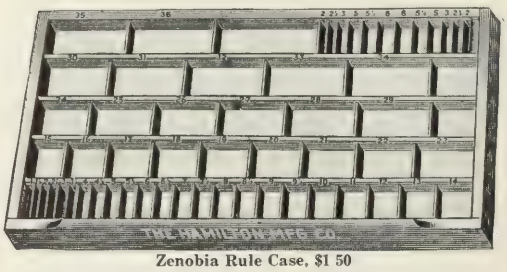
Furneaux Rule Case, $1 40

Designed by Geo. A. Furneaux, Superintendent of The Inland Printer composing room. This Case will hold two large fonts of rule.



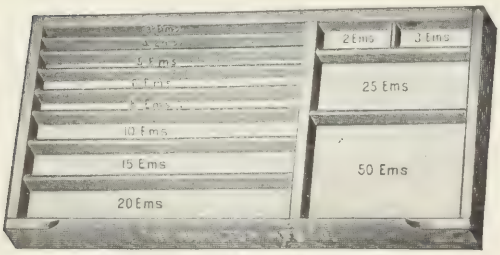
Neshota Rule Case, $2 00

Takes a larger number of lengths than any other Rule Case. All lengths from 1 to 50 picas, with the usual half-pica lengths and places for mitered pieces.



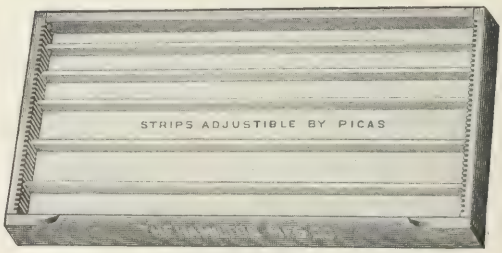
Zenobia Rule Case, $1 50

Holds fewer sizes and larger fonts than the Neshota. Takes all lengths up to 36 ems.



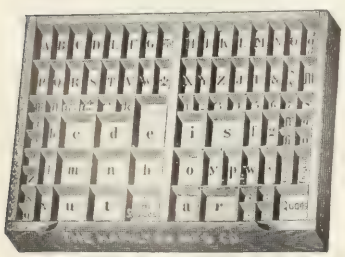
Metal Furniture Case, $1 50

Compartments for each length as shown. Furnished in single or double depth, **$2 00**



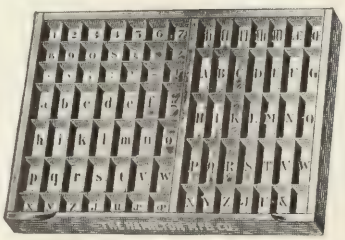
Wood Type Case, $0 90

Graduated by picas on the ends. Strips can be adjusted to fit any size of type.



Italic Job and California Job Case, $0 75

The standard two-thirds Case for all cabinets.



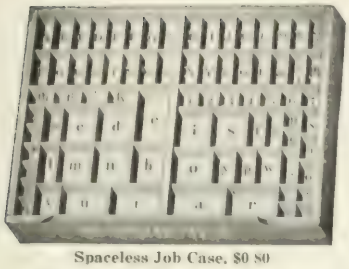
Dearing Job Case, $0 75

The largest capacity of any two-thirds Case.

Yankee Job Case, $0 75

The most popular of all two-thirds Cases.

Prices, Illustrations and Layouts of Miscellaneous Cases



Spaceless Job Case, $0 80

Two-thirds size. All boxes for spaces and quads are omitted from this Case.

Hamilton Lead and Slug Case, $0 75

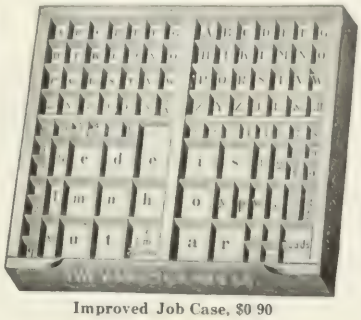
Two-thirds size. Separate compartments, by picas, for lengths 4 to 25 picas inclusive.

Brass Leader Case, $0 75

Two-thirds size. Compartments for lengths 1 to 25 picas. Half ems 1½ to 9½ picas.

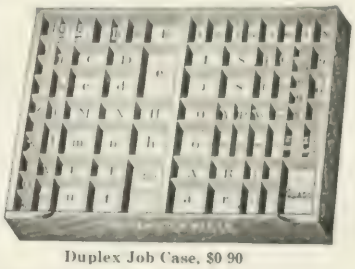
California Job Case, $0 85

Three-quarter size. All three-quarter Cases listed by us are made in the same form and arrangement as the full size of the corresponding styles. We therefore illustrate but one three-quarter Case to show the comparative size.



Improved Job Case, $0 90

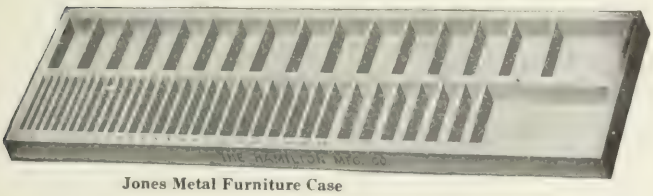
Two-thirds size. An odd size, 21¾ by 19$^{3}/_{4}$ inches deep. Fits regular two-thirds case rack.



Duplex Job Case, $0 90

Two-thirds size. The Duplex Job Case is unique. No other Case like it. Takes capital and lower case characters in adjoining compartments.

Jones Metal Furniture Case

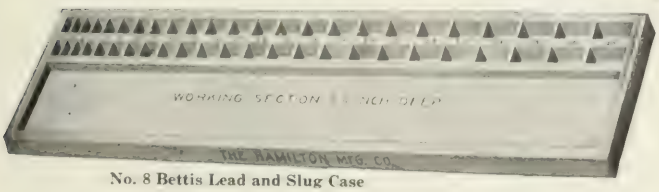


Jones Metal Furniture Case

The Jones Metal Furniture Case for the proper storage of metal furniture will facilitate its use and maintain its accuracy. When thrown around promiscuously in boxes and drawers the delicate edges of metal furniture become battered, and it is permanently injured and rendered unfit for use in fine work. Much time will be saved by keeping metal furniture in cases with compartments numbered so that any desired length can be picked up without sorting a miscellaneous collection.

This Case is constructed of hardwood with a thick 3-ply bottom, firmly fastened to the edges and also to the center bar. Being two and one-half inches deep on the inside, it will hold a great quantity of metal, and is strongly constructed with this end in view. It has forty-nine compartments as shown by the illustration. Size, outside measure, 18x72 inches. Weight, not crated, 30 pounds. List price . **$7 00**

The Bettis Lead and Slug Cases



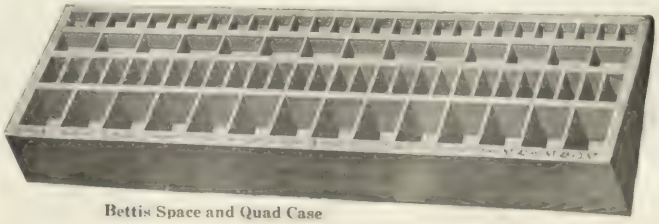
No. 8 Bettis Lead and Slug Case

The No. 8 Bettis Lead and Slug Case takes the most commonly used sizes—from 4 to 28 picas, varying by single picas, but skipping the 27-em length. There are two compartments for each length, each compartment two and three-eighths inches wide from back to front, so that leads and slugs can be kept in separate compartments. The blank space at the front is five-eighths of an inch deep and eleven inches wide, and will readily take a ten by twenty-four brass-lined or all-brass job galley, and is intended for a working space. This is the proper case to use in connection with steel run stands.

Length, 72 inches; width, 18 inches, outside; depth, inside lead compartments, 1½ inches; working space, ⅝-inch. Weight, not crated, 22 pounds. List price . . . . . **$ 5 00**
List price, with full brass lined working space **15 00**

The Bettis Space and Quad Case is of the same ground dimensions as the series of Bettis Lead and Slug Cases, being 72 inches long and 18 inches wide. It provides boxes for fourteen sizes of spaces and quads, six boxes for each size from six to forty-eight point, as the illustration shows; large deep boxes at the front for quads and smaller and shallower boxes at the back for spaces. It is six inches deep at the front and two and one-half inches deep at the back.

The use of this Case will enable all spaces and quads for job fonts to be kept in a single case. It is impossible to estimate the gain in time, and the saving in material when this Case is used. There is one place for every size of space or quad, and the compositor can find in a moment just what he wants. The Case is a great convenience as it forms an easily accessible storage place for all spaces and quads. It can be laid on the top of any stand in the most convenient location in the printing office, so that all can reach it readily. Weight, uncrated, 32 pounds. List price . . **$10 00**



Bettis Space and Quad Case

The Bettis Lead and Slug Cases

Few printing offices are now without the Bettis Cases. They possess wonderful capacity and are strongly built to sustain a full load of leads and slugs, stacked two tiers deep. All these Cases are one and one-half inches deep, thus readily taking two tiers of three-quarter inch leads and slugs. These Cases having proved so very popular and so thoroughly practical, we have extended the line to meet the demand for a variety of inside arrangement. Cases of this size, specially designed, can be furnished to meet the requirements of any office. The No. 2, Three Case Tilting Brackets, or the No. 4, Three Case Brackets, without tilting feature, are the proper brackets to use.

No. 1 Bettis Lead and Slug Case

The No. 1 Bettis Lead and Slug Case has compartments from 4 to 28 picas wide, varying by single picas, omitting the 27-em length. Partitions run from front to back without central division.

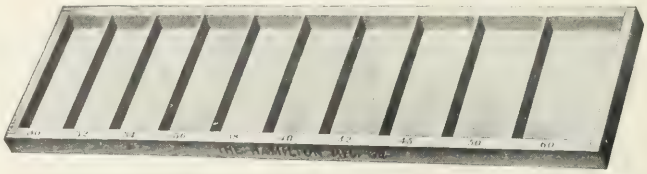
Length, 72 inches; width, 18 inches, outside; depth, inside, 1½ inches. Weight, not crated, 21 pounds.

List price **$4 00**

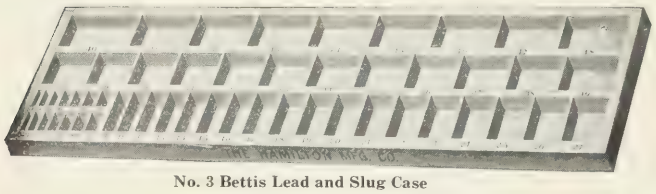
The No. 2 Bettis Lead and Slug Case has compartments from 30 to 60 picas wide—one compartment for each of the following lengths: 30, 32, 34, 36, 38, 40, 42, 45, 50 and 60 picas. Partitions run from front to back without central division.

Length, 72 inches; width, 18 inches, outside; depth, inside, 1½ inches. Weight, not crated, 18 pounds.

List price **$4 00**



No. 2 Bettis Lead and Slug Case



No. 3 Bettis Lead and Slug Case

The No. 3 Bettis Lead and Slug Case has compartments from 3 to 48 picas wide, varying by single picas. It also has compartments for ½ pica lengths from 3½ to 9½ picas inclusive. The case is divided into three sections, there being two central division bars running the long way of the case.

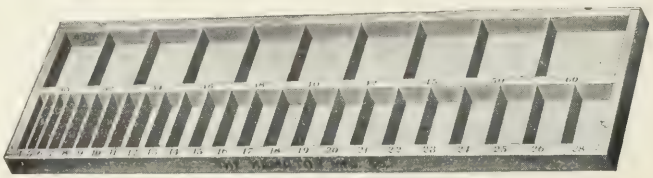
Length, 72 inches; width, 18 inches, outside; depth, 1½ inches, inside. Weight, not crated, 23 pounds.

List price **$5 00**

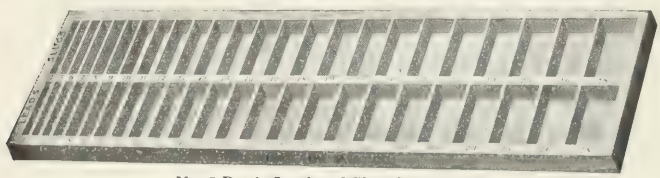
The No. 4 Bettis Lead and Slug Case is the same as the No. 1 and No. 2 combined, having a central bar running the long direction of the case. The front section has compartments from 4 to 28 picas wide, varying by single picas, omitting the 27-em length; the back section has compartments from 30 to 60 picas wide—one compartment for each of the following lengths: 30, 32, 34, 36, 38, 40, 42, 45, 50 and 60 picas.

Length, 72 inches; width, 18 inches, outside; depth, inside, 1½ inches. Width, not crated, 21 pounds.

List price **$5 00**



No. 4 Bettis Lead and Slug Case



No. 5 Bettis Lead and Slug Case

The No. 5 Bettis Lead and Slug Case is a duplicate of the No. 1, with one exception—it has a center bar running the long way, dividing the case into two sections, which are alike in every respect. One section can be used for leads and the other section for slugs. Each section has compartments from 4 to 28 picas wide, varying by single picas, omitting the 27-em length.

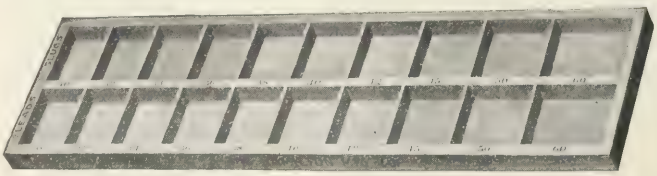
Length, 72 inches; width, 18 inches, outside; depth, inside, 1½ inches. Weight, not crated, 22 pounds.

List price **$5 00**

The No. 6 Bettis Lead and Slug Case is a duplicate of the No. 2, with one exception. It has a center bar running the long way, dividing the case into two sections. These sections are alike in every particular. One section can be used for leads and the other for slugs. Each section has compartments for lengths from 30 to 60 picas wide—one compartment in each section for each of the following lengths: 30, 32, 34, 36, 38, 40, 42, 45, 50 and 60 picas.

Length, 72 inches; width, 18 inches, outside; depth, inside, 1½ inches. Weight, not crated, 19 pounds.

List price **$5 00**



No. 6 Bettis Lead and Slug Case

No. 7 Bettis Lead and Slug Case

The No. 7 Bettis Lead and Slug Case represents the No. 5 and No. 6 combined. It has compartments in duplicate for all the lengths provided for in Cases No. 1 and No. 2. Leads and slugs for all lengths can be carried in separate compartments. There are two compartments for each of the following lengths: 4 to 28 picas, varying by single picas, omitting the 27-em length; also 30, 32, 34, 36, 38, 40, 42, 45, 50 and 60 picas.

Length, 72 inches; width, 18 inches, outside; depth, inside, 1½ inches. Weight, not crated, 23 pounds.

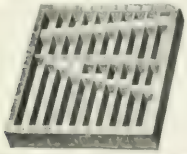
List price **$6 00**

Quarter Size and Other Rule Cases

The series of Harris Rule Cases, quarter-size, and including the Sanspareil Harris Rule Case, one-half size, are in some respects the most economical, efficient and satisfactory Rule Cases ever constructed. The saving in time and space and in prolonging the life of brass rule by always keeping it face up, has made the Harris Cases popular with systematic printers.

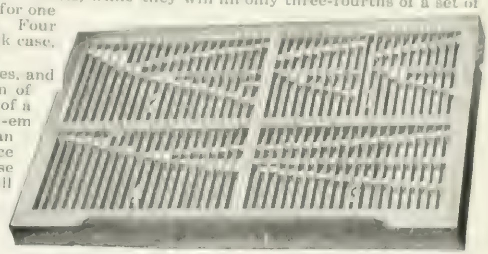
They Save Space, Time and Material

It is seldom that a font of plain rule exceeds thirty-two pounds in weight, while sixteen pounds of dotted rule is usually ample even in large offices. It will take two ordinary rule cases to hold these two fonts, while they will fill only three-fourths of a set of Harris Rule Cases, leaving the other quarter for one or (if a No. 1 case is used) two more fonts. Four Harris Rule Cases fit into one full size blank case, and will hold sixty-four pounds of brass rule.



Harris Rule or Individual Lead Case No. 0

Size, 7⅜x7½ inches, or one-eighth inside size of full size case. Weight, 10 ounces. List price . . . **$0 75**

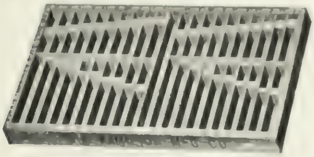


Four Harris Rule Cases in a Full Size Blank Case

List price, including blank case **$4 65**

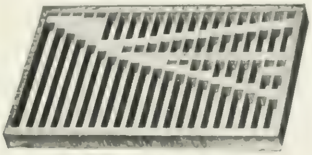
No space is wasted in the Harris Rule Cases, and there is room provided for a large proportion of the smallest lengths—the most valuable part of a font. It takes much longer to trim one 1-em length than a 20-em length, and not one man out of ten can get the 1-em piece square at that. As each Harris Case is only one-quarter the size of a full size case, the compositor can put it on his cap case, or on the stone, or on his galley rest, without inconvenience.

HARRIS RULE OR INDIVIDUAL LEAD CASE NO. 0. In this a compositor may keep his much valued 12 to pica and other thicknesses of leads for justifying purposes, his pickups of dashes, rule, etc. It has boxes from 1 to 9½ ems (varying by ens), from 10 to 22 ems (varying by ems), and from 22 to 28 ems (varying by two ems), with a long box for longer lengths.



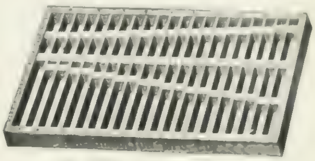
No. 1 Harris Rule Case

Size, 7⅜x15⅛ inches. Weight, 19 ounces. List price **$1 25**



No. 2 Harris Rule Case

Size, 7⅜x15⅛ inches. Weight, 19 ounces. List price **$1 00**



No. 3 Harris Rule Case

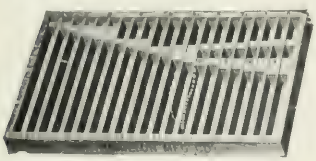
Size, 7⅜x15⅛ inches. Weight, 18 ounces. List price . . . **$0 75**

NO. 1 HARRIS RULE CASE. This case holds two complete small fonts of labor-saving rule, each weighing eight pounds, or sixteen pounds in all. Each half of this case holds eighteen pieces each length from 1 to 8½ ems (varying by ens), eighteen pieces each from 9 to 18 ems (varying by ems), and nine pieces each of 19, 20, 21, 22, 24, 26 and 28 ems, besides boxes for right and left miters.

NO. 2 HARRIS RULE CASE. This case holds one complete font of sixteen pounds weight. It has compartments for thirty-six pieces each from 1 to 9 ems long (varying by ens), eighteen pieces each from 10 to 24 ems (varying by ems), and eighteen pieces each of 26, 28, 30, 32, 34 and 36 ems long, besides boxes for right and left miters. A large proportion of small lengths.

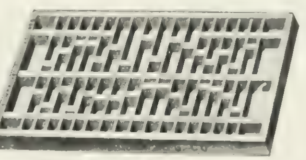
NOS. 3 AND 4 HARRIS RULE CASES. These two cases are designed to be used together to hold a font of rule, suitable for a large office, weighing thirty-two pounds or less. Two, and in some cases four boxes are used to hold the most used sizes. Each case has its proportion of the small sizes, so that if it is desired to carry one case to a compositor's stand for use in rule work, the other is available in its regular place. Case No. 3 has compartments for all short lengths up to and including the 20 em length.

Case No. 4 has compartments for all of the short lengths and also all long lengths up to and including the 36 em lengths. Together these cases have compartments for seventy-two pieces each from 1 to 9 ems long (varying by ens), thirty-six pieces each from 10 to 24 ems long (varying by ems), and eighteen pieces each from 25 to 36 ems long (varying by ems), besides boxes for right and left miters.



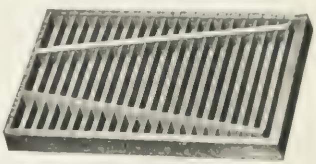
No. 4 Harris Rule Case

Size, 7⅜x15⅛ inches. Weight, 17 ounces. List price **$1 00**



No. 5 Harris Border Case

Size, 7⅜x15⅛ inches. Weight, 18 ounces. List price **$1 00**



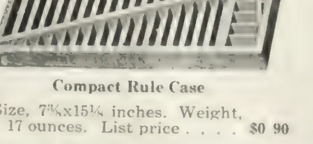
Perfection Rule Case

Size, 7⅜x15⅛ inches. Weight 17 ounces. List price . **$0 90**

NO. 5 HARRIS BORDER CASE. This case may be used in combination with any other quarter-size cases, being exactly the same size. To meet the varied requirements of all border and ornament fonts, the sort partitions are movable, but are so nicely fitted that they remain in any position in which they are placed. This special and novel feature makes it an easy matter to change the sizes of the boxes at will.

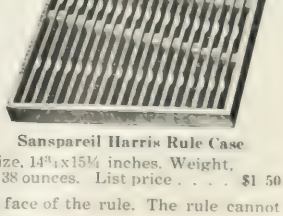
PERFECTION RULE CASE. This is another first-class quarter-size brass rule case. In size it is similar to the Compact Rule Case and accommodates the same lengths, but with a different arrangement of compartments. It has two compartments for all lengths from 1 to 12 ems, and one compartment for lengths from 13 to 36 ems. The variations are by ens from 1 to 10 and by ems from 10 to 36. Four of these cases will fit into an ordinary blank case in a cabinet or rack.

COMPACT RULE CASE. The Compact Rule Case has one compartment for each length from 1 to 36 ems (varying by ens up to 10 ems) and by single ems from 10 to 36 ems. It will hold twenty pieces of each length. It also has compartments for the miters. This rule case is preferred by printers, owing to its compact arrangement and even quantity of each length accommodated. All rule remains standing when placed in this case. The Compact Rule Case is one of the most popular of all rule cases. Few printing offices are without some of them and many offices use this case exclusively. Four of these cases will fit inside a full size blank case. They can be kept in blank cases in cabinets or stands or in quarter case cabinets.



Compact Rule Case

Size, 7⅜x15⅛ inches. Weight, 17 ounces. List price **$0 90**



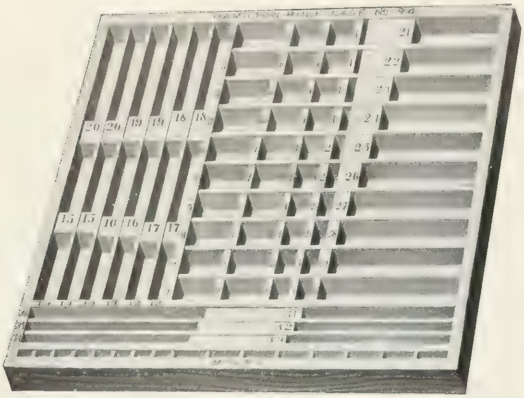
Sanspareil Harris Rule Case

Size, 14¾x15¼ inches. Weight, 38 ounces. List price **$1 50**

THE SANSPAREIL HARRIS RULE CASE. This is without doubt one of the best rule cases yet designed. The walls and partitions are a trifle higher than type high, so the rules are at all times protected; anything can drop, or be laid on the case without touching the face of the rule. The rule cannot get wedged or fall flat on account of the narrow compartments.

Each compartment is the exact size of the rule it is to contain, and the next size will not fit into it, thus preventing sizes being mixed. The rule is easy to extract on account of low cross partitions and the special slot in downward partitions. The compositor need not study the case every time he wants a rule; the compartments follow in consecutive order, from 1 to 42 ems. Each case is complete with all sizes from 1 to 9½ ems (varying by ens), and from 10 to 42 ems (varying by ems), with an extra allowance for small sizes; also an additional row for miters (second row of small sizes) which, when no miters are carried, can be used for overflow on small sizes, of which there is always a large stock. For large fonts of rule, running in lengths not usually included in fonts of labor-saving brass rule as now put up by the makers, it is especially valuable, and there is no case to replace it.

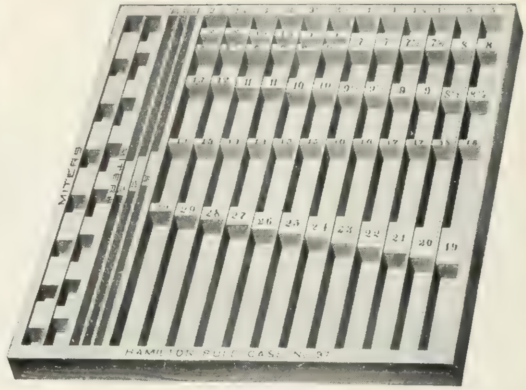
Hamilton New Rule Cases



No. 94 Hamilton Rule Case

The Hamilton Rule Case, No. 94, takes a 25-pound font of standard rule on 2-point body. Separate compartments are provided for every length from 1 to 36 picas long, inclusive, with separate compartments for two sizes of miters. Where there are a large number of pieces in the shorter lengths, the compartments are doubled, two for each length, so as to maintain narrowness of compartments in order to keep the rules standing.

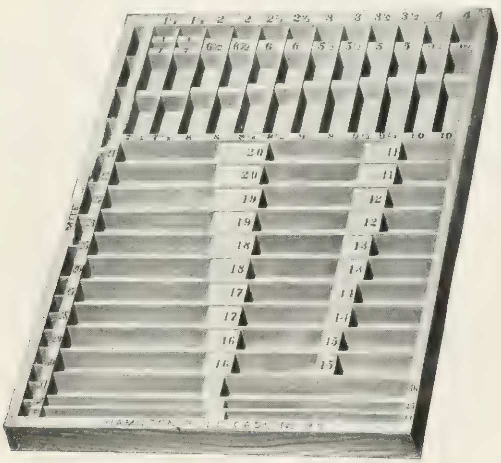
Size, 15⅜x12½ inches, outside measure. Weight, 33 ounces.
List price **$1 40**



No. 97 Hamilton Rule Case

The No. 97 Hamilton Rule Case takes a 25-pound font of standard rule on 6-point body. Separate compartments are provided for every length from 1 to 36 picas long, inclusive, with separate compartments for two sizes of miters. Where there are a large number of pieces in the shorter lengths, the compartments are doubled, two for each length, so as to maintain narrowness of compartments in order to keep the rules standing.

Size 13¼x16¼ inches, outside measure. Weight, 40 ounces.
List price **$1 40**

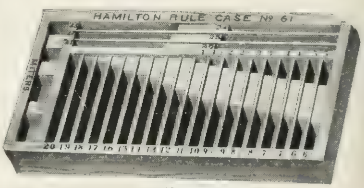


No. 95 Hamilton Rule Case

The Hamilton Rule Case, No. 95, takes a 25-pound font of standard rule on 3-point body. Separate compartments are provided for every length from 1 to 36 picas long, inclusive, with separate compartments for two sizes of miters. Where there are a large number of pieces in the shorter lengths the compartments are doubled, two for each length, so as to maintain narrowness of compartments in order to keep the rules standing.

Size, 13⅝x14¼ inches, outside measure. Weight, 34 ounces.
List price **$1 40**

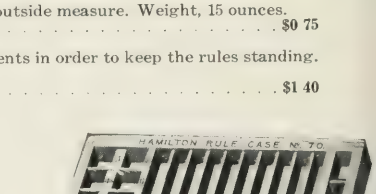
The No. 61 Hamilton Rule Case takes a 5-pound font of standard rule on 6-point body. Separate compartments are provided for every length from 1 to 26 picas long, inclusive, with separate compartments for miters. All compartments are narrow, so that the rules will remain standing on edge.



No. 61 Hamilton Rule Case

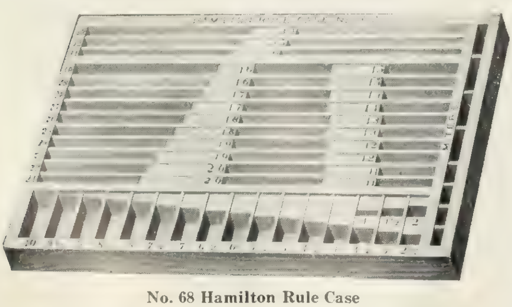
Size, 5⅜ x 11½ inches, outside measure. Weight, 14 ounces.
List price **$0 75**

The Hamilton Rule Case No. 59, takes a 5-pound font of standard rule on 3-point body. Separate compartments are provided for every length from 1 to 26 picas long, inclusive, with separate compartments for miters. All compartments are narrow, so that the rules will remain standing on edge.



No. 59 Hamilton Rule Case

Size, 5⅞x11¾ inches, outside measure. Weight, 15 ounces.
List price **$0 75**

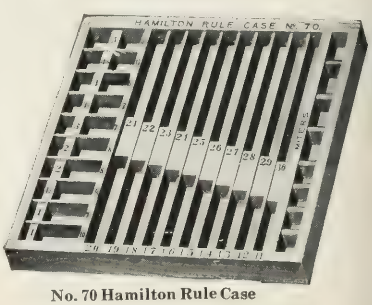


No. 68 Hamilton Rule Case

The No. 70 Hamilton Rule Case takes a 10-lb. font of standard rule on 6-point body. Separate compartments are provided for every length from 1 to 30 picas long, inclusive, with separate compartments for miters. The compartments are narrow, so that the pieces of rule will always remain standing on edge.

Size, 9⅛ x 11 inches, outside measure. Weight, 19 ounces.

List price **$1 00**

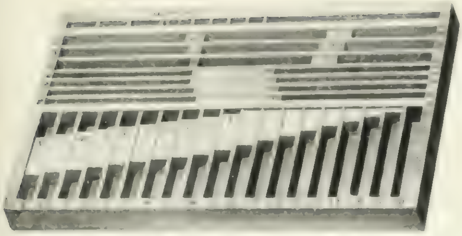


No. 70 Hamilton Rule Case

The No. 68 Hamilton Rule Case takes a 10-pound font of standard rule on 3-point body. Separate compartments are provided for every length from 1 to 36 picas long, inclusive, with separate compartments for miters. These compartments are narrow, so that the pieces of rule will always remain standing on edge.
Size, 8⁵⁄₁₆x15 inches, outside measure. Weight, 28 ounces. List price **$1 25**

All Cases shown on this page have a line gauge printed on the edge for determining lengths

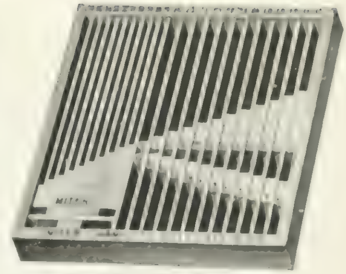
Hamilton New Rule Cases



No. 67 Hamilton Rule Case

The Hamilton Rule Case No. 67, takes a 10-pound font of standard rule on 2-point body. Separate compartments are provided for every length from 1 to 36 picas long, inclusive, with separate compartments for miters. All compartments are narrow, so that the rules will always remain standing on edge.

Size, 7½x14¾ inches, outside measure. Weight, 24 ounces. List price . . . $1 25



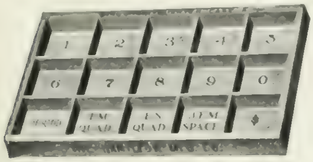
No. 58 Hamilton Rule Case

The Hamilton Rule Case No. 58, takes a 5-pound font of standard rule on 2-point body. Separate campartments are provided for every length from 1 to 36 picas long, inclusive, with separate compartments for miters. All compartments are narrow, so that the rules will always remain standing on edge. Size, 8¼x9⅛ inches, outside measure. Weight, 15 ounces. List price $0 75

A line gauge for determining lengths is printed on the edge of the above Hamilton Rule Cases

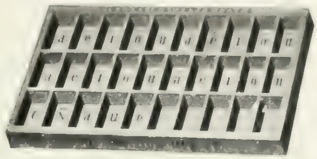
Space, Quad, Leader and Border Quarter Cases

The series of four Wisconsin Quarter-size Cases have become very popular and are now widely used. They are intended to hold odd material not usually provided for in regular full size cases. For signs, borders, accents, split fractions, figures, spaces and quads, etc., they are most convenient. The Wisconsin Quarter Cases provide a means of keeping these valuable sorts where they can be found. These Cases are 7⅜x15⅛ inches in size, and can be placed on a cap case, a stand, or a stone, convenient to the compositor's hand. In setting mathematical work, foreign languages, dictionaries, special catalogues, with much table work, these Quarter Cases will prove invaluable. A few schemes are shown for laying signs, fractions and figures. Various other arrangements can be provided which will suggest themselves to the intelligent compositor.



Wisconsin Quarter Size Case "A"

Convenient for holding figures, spaces and quads, fractions, etc. Size, 7⅜x15⅛ inches. Weight, 15 ounces.
List price **$0 65**



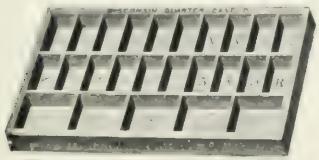
Wisconsin Quarter Size Case "B"

This pattern is suitable for holding accented letters and split fractions. Size, 7⅜x15⅛ inches. Weight, 17 ounces.
List price **$0 65**

Wisconsin Quarter Size Case "C"

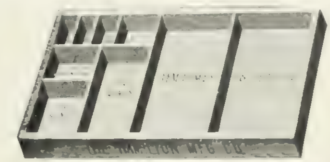
This pattern has large boxes for figures and smaller compartments for fractions. Size, 7⅜x15⅛ inches. Weight, 14 ounces.
List price **$0 65**

The American Type Founders Company sells the best of Everything for the Printer.



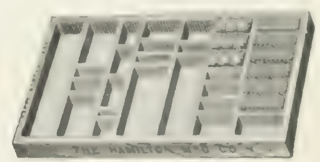
Wisconsin Quarter Size Case "D"

Especially convenient for holding signs, borders and odd characters. Size, 7⅜x15⅛ inches. Weight, 16 ounces.
List price **$0 65**



All Right Space and Quad Case

Size, 7⅜x15⅛ inches. Weight, 15 ounces.
List price **$0 75**

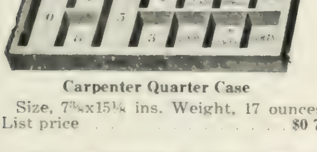


Happy Border Case

Size, 7⅜x15⅛ ins. Weight, 22 ounces.
List price **$1 25**

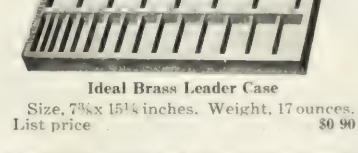
The All Right Space and Quad Case is a most useful addition to the family of Quarter-size Cases. It has compartments for one-half point thin copper spaces, one point thin brass spaces, also compartments for 3, 4, 5 and 6 em spaces, em, en and 2 and 3 em quads. Compartments are proportioned in size correctly to take the amount of each size as put up by the type founders. Each case will hold a standard 10-pound font of spaces and quads of any size without over-filling the boxes.

The Happy Border Case has adjustable partitions by picas the long way and by 6 points from front to back. Any font of border can be laid in this Case and the compartments laid out to accommodate the different characters, and left that way. Eight long slotted divisions and an assortment of short divisions in various lengths, accompany each Case. Four of these Border Cases will fit inside an ordinary blank case in a cabinet or case rack.



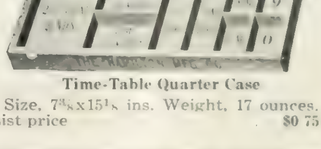
Carpenter Quarter Case

Size, 7⅜x15⅛ ins. Weight, 17 ounces.
List price **$0 75**



Ideal Brass Leader Case

Size, 7⅜x 15⅛ inches. Weight, 17 ounces.
List price **$0 90**



Time-Table Quarter Case

Size, 7⅜x15⅛ ins. Weight, 17 ounces.
List price **$0 75**

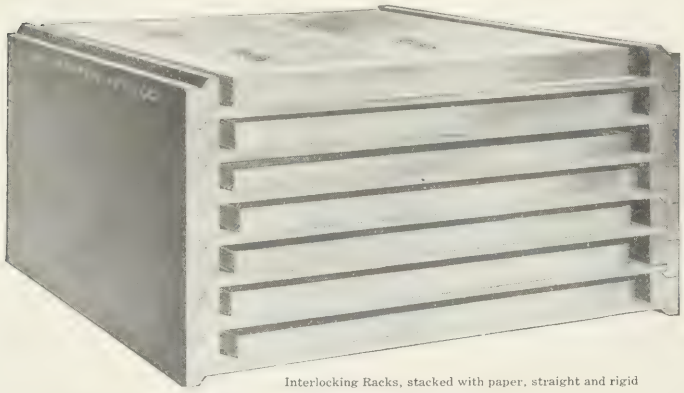
The Carpenter Quarter Case is most useful in tabular and other intricate work. It is intended to set on the ends of the lower cases in the center between two lower cases covering the space usually occupied by a galley board, and the lugs on the back end hold the case from slipping off at the front. It also has a lip at the front which enables other small cases to be put on top of this Case and remain in place without danger of slipping off. In use it is a vertical figure case with double spaces for 5's and ciphers—the figures most used—and compartments for justifying material and special sorts.

The Ideal Brass Leader Case is designed to hold ordinary five and ten-pound fonts of brass leaders as put up by the type founders. Has compartments for all lengths from 1 to 22 picas, variations by ens from 1 to 10 and by ems from 10 to 22. Four of these cases will just fit inside a regular blank case in a rack or cabinet. The Case is fitted with a New Departure bottom. Numbers printed over each compartment.

The Time-Table Quarter Case is a new and popular quarter-size case for tabular work. It has special compartments for A.M. and P.M. This case can be made useful in other work, such as legal notices, market reports, etc. The type can be laid in the case as required for the work in hand. Like other quarter-size cases, four will fit into a regular full-size blank case. They will also fit into our regular line of quarter case cabinets.

Koerner's Patent Interlocking Drying Racks

With these Racks sheets are taken *direct from the fly*, and may be stacked ceiling high, in a perfectly straight and rigid pile, which cannot be knocked over by accident, and with no more weight on the bottom than on the top sheets. This pile is a most effective drying room, occupying only the floor space of one rack, and from the time the sheets are fed into the machine until ready for the bindery they need not be handled.



Interlocking Racks, stacked with paper, straight and rigid

The interlocking device makes the pile straight and rigid. Each Rack is firmly locked on its neighbor, but each slides with ease on the Rack immediately below it. They save handling, all the time of that operation, and the consequent waste of paper through offset, smearing, fingermarks and tearing. In many cases these Racks save expensive slip-sheeting. They circumvent electricity by receiving the sheet direct from the fly.

They insure evenness of temperature and thereby assist in getting a perfect register on lithographic work.

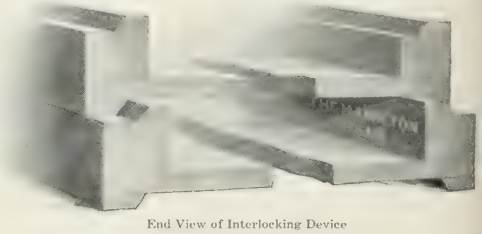
They save seventy-five per cent of floor space over any other method of drying sheets, from one to two per cent of paper, and a vast amount of time.

The Patent Interlocking Drying Racks are made with hardwood sides, wide softwood slats, and are very strongly put together.

The side rails on Koerner Racks are one and one-quarter inches wide.

The slats which support the sheets are three-eighths of an inch thick. When stacked, each Rack adds one and nine-sixteenths inches to the height. Unless otherwise ordered, the side rails are always made to run the longest dimension.

The prices given below are for Racks with a clearance of one and three-sixteenths inches between, when Racks are stacked. For a clearance of two and one-half inches add twenty-five per cent to prices mentioned below, and for a clearance of three inches add thirty-five per cent to the prices mentioned below. Special Racks of any size and pattern can be made to order. Prices will be furnished on application and receipt of particulars.



End View of Interlocking Device

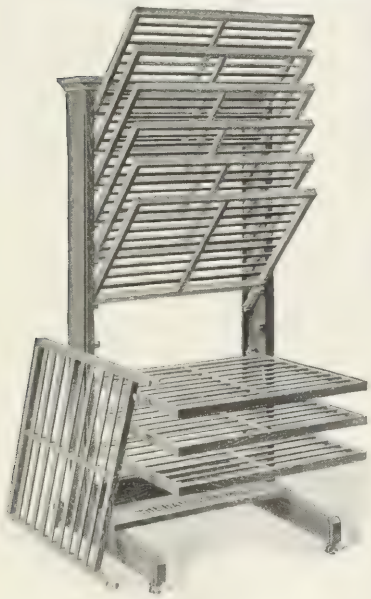
Chicago Drying Racks

A more economical addition cannot be made to a modernly equipped printing office than a suitable outfit for the proper drying of the printed sheets. These Drying Racks are substantially constructed of selected hardwood, and the framework is finished in the best cabinet style. They have wide bases, which prevent the frames from toppling over under heavy loads. The side rails extend at the rear and are notched to receive round lugs which project from the frame upright. When loaded the Dryers can be placed in a horizontal position, and when not loaded, they can be inclined upward and out of the way until required.



Chicago Drying Rack

These Drying Racks are made in three sizes, to take sheets 24x24, 24x36 and 30x48 inches. The Racks are supplied complete with Dryers, and the Dryers are also sold separately in dozen lots. Each rack is mounted on heavy castors, and can be transferred about the press room as the work in hand requires.

The New York Drying Racks

The New York Dryers are also removable and can be transferred to the press in order to take the sheets direct from the fly. Thus undue handling, which means an excess of spoilage, is avoided. The use of these Dryers prevents undue stacking of freshly printed sheets, and expensive slip sheeting is reduced to a minimum. The rightful use of a good set of Dryers will prevent much of the smutting commonly experienced.

The New York Drying Rack is made in four sizes. The Dryers are made in two sizes to take sheets twenty-four by thirty-six and twenty-eight by forty-two inches. The frames are made to take twenty or thirty dryers, as desired. Each rack is mounted on castors and can be transferred about the press room as the requirements demand. Dryers are sold complete with supporting Racks or loosely by the dozen.

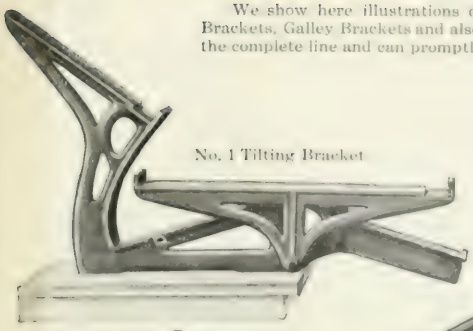
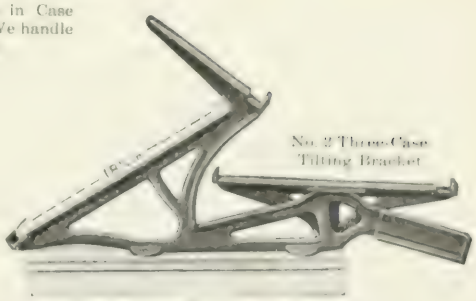
The Best Ideas in Case Brackets

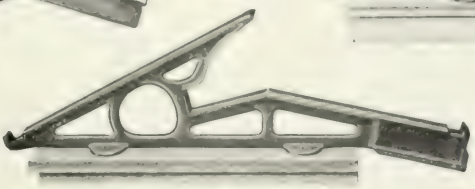
We show here illustrations of all the best ideas in Case Brackets, Galley Brackets and also Roller Brackets. We handle the complete line and can promptly supply your wants.



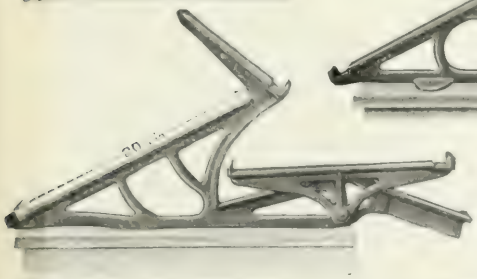
No. 1 Tilting Bracket



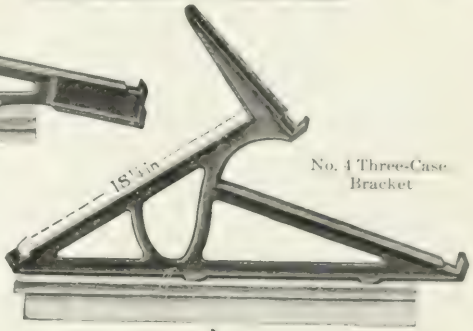
No. 2 Three-Case Tilting Bracket



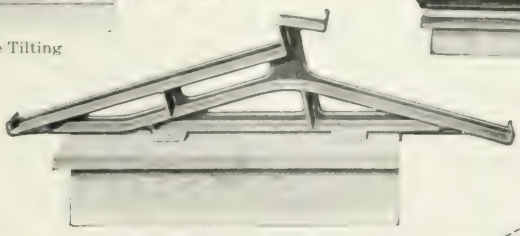
No. 16 Low Job Case Bracket



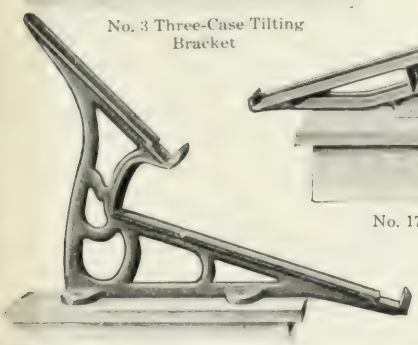
No. 3 Three-Case Tilting Bracket



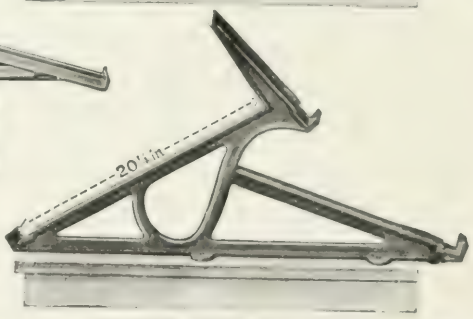
No. 4 Three-Case Bracket



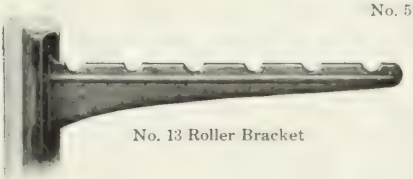
No. 17 Low Job Case Bracket



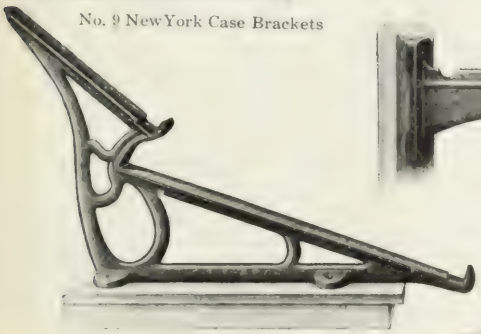
No. 9 NewYork Case Brackets



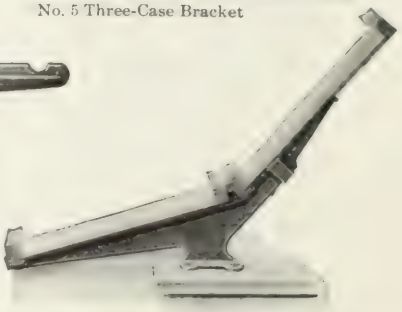
No. 5 Three-Case Bracket



No. 13 Roller Bracket

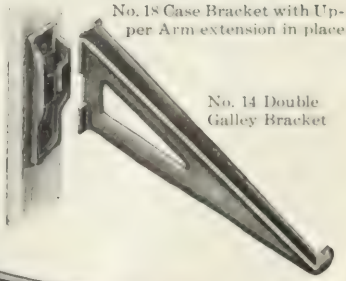


No. 8 Double Case Bracket, Style C

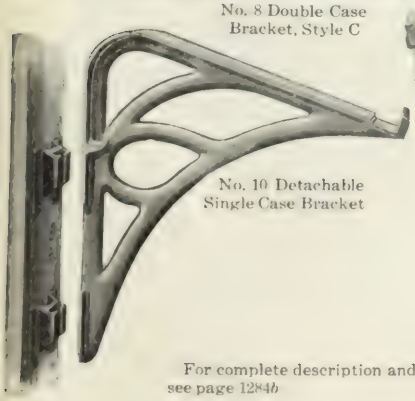


No. 18 Case Bracket with Upper Arm extension in place

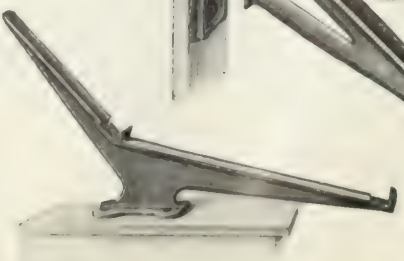
No. 18 Case Bracket with Upper Arm detached



No. 14 Double Galley Bracket



No. 10 Detachable Single Case Bracket



No. 7 Double Case Bracket, style B

For complete description and prices of all Brackets see page 1284*b*

Case and Roller Brackets

Brackets are made for Type Cases, Lead and Slug Banks, Working Banks, Galleys, Rollers, etc. We illustrate on the opposite page a selection from which almost any possible requirement can be met. The three-case brackets are made with and without the tilting feature in two sizes. All Brackets are of cast iron, free from flaws and are furnished with black japanned finish, with holes drilled for screws.

The No. 1 Tilting Bracket takes a pair of standard size news cases. The lower case can be tilted back to expose the galley board underneath.
Price, per pair $2 00

The No. 2 Three-Case Tilting Bracket takes a pair of standard size news cases at the front, and an eighteen inch working bank or standard size Bettis lead and slug case at the rear.
Price, per pair $2 40

The No. 3 Three-Case Tilting Bracket is the same as the No. 2 except that it takes a twenty inch dump at the rear. Takes a pair of standard size news cases at the front.
Price, per pair $2 50

The No. 4 Three-Case Braket is without tilting feature. Takes a pair of standard size news cases at the front, and an eighteen inch working bank or standard Bettis lead and slug case at the rear.
Price, per pair $1 90

The No. 5 Three-Case Bracket is without tilting feature and is same as the No. 4, except that it takes a twenty inch dump at the rear. Accommodates a standard pair of news cases at the front.
Price, per pair $2 00

The No. 7 Double Case Bracket, style B, is for attachment on a flat surface. It takes a pair of standard size news cases.
Price, per pair $1 25

The No. 8 Double-Case Bracket, style C, takes an eighteen inch working bank or standard Bettis lead and slug case at the front and a standard full size case at the top.
Price, per pair $1 75

The No. 9 New York Case Bracket, takes a pair of standard size news cases. Provides for bringing the cap case forward several inches over the lower case and close to the compositor.
Price, per pair $1 50

The No. 10 Detachable Single Case Bracket, with sockets, will attach to an upright surface, particularly on the end of a cabinet. Will hold a single full size case or a working bank.
Price, per pair $2 00

The No. 13 Roller Bracket will attach to a perpendicular surface. Bracket arms extend horizontally and will hold six rollers.
Price, per pair . . . . . 50 cents

The No. 16 Low Job Case Bracket will take two job cases on one side, one placed on top of the other. Can be tilted back and held in reversed position. The opposite side will take a standard eighteen inch Bettis lead and slug case or working bank.
Price, per pair $2 00

The No. 17 Low Job Case Bracket will take a standard size job case on one side, which can be tilted back. The opposite side will take a standard size eighteen inch Bettis lead and slug case or working bank. In the center is a four-inch space for lead bank.
Price, per pair $2 00

The No. 18 Case Bracket with upper arm detached will take a job case at the front and a two-surface lead and slug tray at the top.
Price, per pair $2 00

The No. 18 Case Bracket with upper arm extension in place will take a pair of news cases.
Price, per pair $2 00

Everything that is Good for the Printers as Quick as It Appears

The American Type Founders Company, in its capacity as Universal Provider for Printing Plants, furnishes every standard and approved and also every new and good machine, apparatus, appliance or tool as soon as it appears. This is the most complete catalogue of Printers' Requirements ever issued, but when from time to time in the future anything new in this line appears, and if it is worthy to be recommended, it will be on sale by this company.

IF IT IS GOOD FOR THE PRINTER THE AMERICAN HAS IT FIRST

IMPORTANT TO BUYERS OF STEEL EQUIPMENTS

In the design and the method of construction and the materials used the printing equipments catalogued in the following pages are for the most part quite new. It is the aim to make these steel and iron equipments not only more durable but also more space- and time-saving than any equipments heretofore offered to printers. The initial expense of the dies and formers required for each piece of steel furniture is so great, that the selection of the most advanced and best approved designs is a matter of the utmost importance to the manufacturer, a consideration that cannot fail to benefit the buyers. There can be no question of the ultimate economy of installing properly constructed steel and iron equipments.

GOOD QUALITY AND BAD QUALITY

The mere fact that iron and steel are used does not establish Stability and Durability. A method of construction which may be suitable for ordinary office furniture is quite unsuitable and inadequate for printing plant equipments, which have to sustain heavy weights and withstand great strain and wear and tear. Good quality in steel and iron equipments depends (even more than in wood) on careful, workmanlike and substantial construction. The place to look for the essential quality is in the interior or concealed work and material. While steel and iron construction lends itself to attractive designs, the attractiveness may serve to conceal poor construction and inadequate materials. The line of equipments offered here is not only attractive in appearance, but has behind the attractiveness a method of construction and a selection of materials which make these equipments the most economical and best value procurable, when tested by length of service and the maintenance of good appearance long after flimsy steel constructions and the best wooden constructions have reached the scrap heap.

A shelf of steel, if made too light, is not so serviceable as one made of wood of suitable thickness, on account of the greater spring in the steel. Iron make-up and storage tables, if not adequately supported by a sufficient number of legs, will soon disclose a degree of instability which will retard the work done on them. The first consideration in purchasing steel and iron equipments should be Stability and Durability.

The American Type Founders Company is behind every piece of steel and iron equipment it sells. It recommends this class of equipment to those who are looking for permanent investments in equipments of a nature which may be passed along to their grandchildren with little practicable impairment of quality, and which will maintain a good and dignified appearance to their successors. If properly made, this class of equipment cannot, at present, be made as cheaply as wooden equipments, and any attempt to cheapen construction will result in a poor bargain for the purchaser.

SPECIAL REQUIREMENTS FOR NEWSPAPER PLANTS

Newspaper plants of the larger and growing kind require equipments of extra Durability. Furniture which may be adequate to the use of commercial printing plants may not withstand the greater wear and tear of daily newspaper usage. Steel and Iron Equipments which have been in use on daily newspapers for ten years are now as satisfactory both in service and in good appearance as when first bought.

QUESTION OF FIRE INSURANCE

In buildings constructed to be fireproof, the installation of wood equipments increases the hazard and the rate of insurance. If the contents are inflammable the building is in grave danger as well. The use of steel and iron equipments will lessen the risks from fire.

THIS IS THE AGE OF STEEL

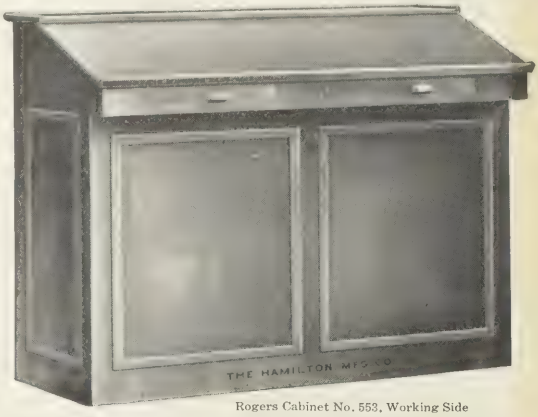
In every direction the increasing use of steel and iron furniture and fittings is observable. The demand is for permanency, for the best value, and that quality which is more appreciated years after the purchase than in the beginning. When the printing plant *runs down* the operating expenses *run up*. Those who invest in *well constructed* steel and iron printing plant equipments are insuring themselves against the plant running down. These equipments will keep the printing plant perennially young. Those who install iron and steel equipments have served notice that they are in business to stay.

Rogers Steel Cabinet No. 553

This highly efficient cabinet occupies the least possible floor space, holds the greatest number of full-size cases it is possible to put into a working cabinet, and gives the compositor liberal facilities for disposing of copy, proofs, tools, and the materials used in the work in hand. Above the cases there is a lead and slug bank holding sizes from four to twenty-five picas. This lead and slug bank is a great convenience and time-saver both to the compositors stationed in the same alley and to compositors who come to the alley from other stations to use the cases below.

The Rogers Cabinet conforms to the only efficient principle: that access to cases in a cabinet or stand should never be obstructed by compositors working in front of them. Alleys should contain cases on one side and working banks on the other side. All the cases and the lead and slug bank are readily available for the compositors using the working banks, and also available without hindering any man's work for compositors stationed in other alleys. Each case should be provided with spaces and quads, to save the time wasted in walking to and from a central space and quad

Rogers Cabinet No. 553, Case Side



Rogers Cabinet No. 553, Working Side

supply every time a line is to be justified, a waste that very quickly foots up more than the cost of the spaces and quads.

An entirely new and good feature is a shelf, ten inches by seventy inches, forming a top to the cabinet, but not in any way interfering with its uses as a working cabinet. This shelf will be found very convenient for holding such things as cuts and other material and quarter-cases holding auxiliary materials required for the work immediately in hand.

The cabinet contains forty-eight full-size California job cases, twenty-four on each side. The runs project three inches beyond the cases to afford a secure hold for each case when it is pulled out for setting a line without removing it from its place in the cabinet.

On the working side there is a full length working bank, seventeen inches deep, on which two full-size cases can be placed, if required. This being a job compositor's cabinet, no provision is made for pair cases. On this side also are two spacious drawers.

The construction is strong, durable and very attractive. The frame and working bank are of heavy reinforced steel, the ends and sides of pressed sheet steel. The runs are so incorporated with the frame as to be more than sufficiently strong to withstand the heaviest weights which may properly be placed on them. Color, olive green.

Linolite Lamps, as described on page 1300, may be attached on brackets over the working bank or above the case racks, as shown in illustration, if required.

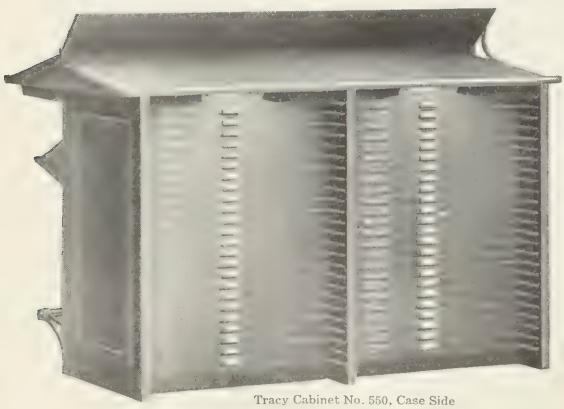
Dimensions and Contents of Rogers Cabinet No. 553

**Cases are of wood, with boxes $^{15}/_{16}$-inch deep, and with Steel Front Protectors and Bronzed Pulls.*

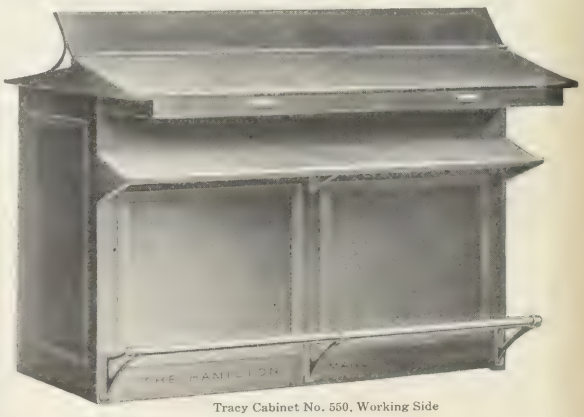
Contains 48 full-size California job cases. Length, over all, 71 inches; depth at floor, 21½ inches; depth, over all, 25½ inches; height to lower edge of working bank, 43 inches; height, over all, 50 inches. Case numbers extra. Linolite Lamps extra. Label holders (as shown in cut) are extra. *Price on application. Extra deep California job cases, with boxes $1^{1}/_{16}$ inch deep, furnished at advance on price of regular cases.*

Tracy Steel Cabinet No. 550

For those who do not object to having a working bank on the case side of a cabinet, the Tracy Cabinet will commend itself, all giving good facilities for bunching the maximum number of compositors in the least possible area. On the case side there is a working bank above the cases, which, however, serves a better purpose in being available for quarter-cases holding auxiliaries of all kinds, or brass rule cases, or special space and quad cases, bringing such material handy to the compositor in the alley and also to compositors stationed elsewhere who may have occasion to use the cases in the alley.



Tracy Cabinet No. 550, Case Side



Tracy Cabinet No. 550, Working Side

On the working side there are three banks: a working bank, seventeen inches deep; a bank below the working bank, 8½ inches deep, for holding cuts and other materials in use in the work immediately in hand; and (above the working bank) a bank 8½ inches deep, suitable for holding a long lead and slug rack, or a long space and quad case, or quarter-cases filled with brass rule or auxiliary materials. There are also two capacious drawers and a round iron foot rail which tends to prevent fatigue.

The construction is strong and durable and attractive. The frame is made of heavy steel, the banks are of reinforced steel and the sides and ends of pressed steel. Color, olive green. Linolite Lamps, as described on page 1300, may be attached on brackets over the working banks above the case racks, as shown in illustration, if required. Label holders (as shown in cut) are extra.

Dimensions and Contents of Tracy Cabinet No. 550

Cases are of wood, with boxes $^{15}/_{16}$-inch deep, and with Steel Front Protectors and Bronzed Pulls.

Contains 48 full-size California job cases; length, 71 inches; depth, on floor, 21½ inches; depth over all, 37 inches; height to lower edge of working bank, 43 inches; height over all, 54 inches. Foot rail extra. Linolite Lamps extra. *Price on application. Extra deep California job cases, with boxes $1^{1}/_{16}$-inch deep, furnished at advance on price of regular cases.*

Extension Front Steel Cabinets

Extension Front Cabinets are undoubtedly the most convenient and time-saving. Before the introduction of this style of cabinet it was necessary to add a clumsy, inconvenient rear extension to each cabinet case—an intolerable nuisance when it was desired to set from such cases on the tops of other case stands or cabinets. By extending the sides of cabinet and the case runs four inches as shown in the illustration, any case can be pulled out and every box in it exposed without removal from runs. Further, if it is desired to set from a case which is either too high or too low to be conveniently reached, such case may be slipped into a convenient position between any of the runs and it will be held securely there by the extension of the runs, without removing the case already held between the same runs.

Extension Front Steel Cabinet No. 507

The construction is strong, durable and attractive. The frame and runs are of heavy steel; the top, sides and backs are of sheet steel, reinforced where required. For compactness these cabinets cannot be excelled. Color, olive green.

The cabinet illustrated here is correct height for utilizing the top of it for storing matter or material or for attaching case brackets or steel sectional working tops. If required, any suitable case brackets may be attached. Label holders shown in the illustration are extra. There are 24 full-size cases in each tier. These cases have extra deep boxes, so that their type holding capacity is one-sixth more than that of regular full-size job cases. This increase of capacity is an important consideration to those printers who are realizing the economies derived from the purchase and the use of weight fonts of job type.

Extension Front Steel Cabinet No. 501

Extension Front Steel Cabinet No. 503

Contents and Dimensions of Extension Front Steel Cabinets

Cases are made of wood, with boxes $^{15}/_{16}$ inch deep, and with Steel Front Protectors and Bronzed Pulls

No. 501, contains 25 full-size California job cases. Height, 43 inches; depth, 23 inches; width, 36¼ inches. See illustration.
No. 503, contains 50 full-size California job cases. Height, 43 inches; depth, 23 inches; width, 69¾ inches.
No. 505, contains 50 full-size California job cases, in one tier. Height, 83½ inches; depth, 23 inches, width, 36¼ inches.
No. 507, contains 75 full-size California job cases. Height, 43 inches; depth, 23 inches; width, 103¼ inches. See illustration.
Prices on application. Extra deep California job cases, with boxes $1^{1}/_{16}$ inch deep, furnished at advance on prices of regular depth cases.

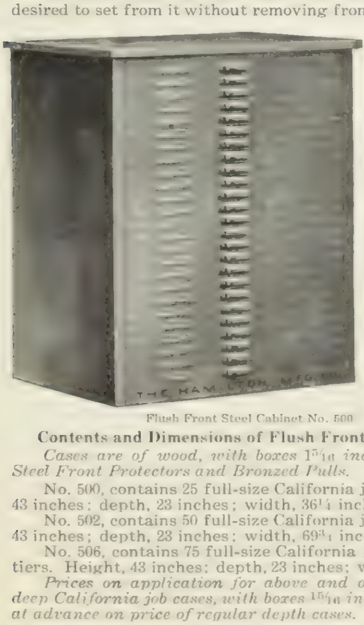
Flush Front Steel Cabinets

The cases in these cabinets have extensions on the rear, so they may be pulled out, exposing all the boxes of the case, when it is desired to set from it without removing from the cabinet. The boxes in the cases in these and all steel cabinets are fifteen-sixteenths inch deep, giving them one-sixth greater type capacity than heretofore, without increasing the space occupied by the cases in the cabinet, the frames of the cases being of the same dimensions as those of regular cases. This is an important consideration to those printers who wish to realize the economical advantages derived both from purchasing and using weight fonts of job types.

The steel runs in the cabinets are incorporated with the inner steel lining, and are capable of sustaining extraordinary weights and strains. Strength in the frame is useless if the strength of the case runs is inadequate to several times the strain caused by the weight of a full case.

Label holders and numbers on cases are extra. The cabinets shown here are 43 inches high, and case and other working brackets and sectional working tops may be screwed on them, for which purpose holes are tapped in the steel tops.

The construction is strong, durable and attractive. The frame and runs are made of heavy steel; the top and sides and back are of sheet steel, reinforced where required. Color, olive green.



Flush Front Steel Cabinet No. 500

Contents and Dimensions of Flush Front Steel Cabinets

Cases are of wood, with boxes $1^{5}/_{16}$ inch deep, and have Steel Front Protectors and Bronzed Pulls.

No. 500, contains 25 full-size California job cases. Height, 43 inches; depth, 23 inches; width, 36¼ inches.

No. 502, contains 50 full-size California job cases. Height, 43 inches; depth, 23 inches; width, 69¾ inches.

No. 506, contains 75 full-size California job cases, in three tiers. Height, 43 inches; depth, 23 inches; width, 103¼ inches.

Prices on application for above and other sizes. Extra deep California job cases, with boxes $^{15}/_{16}$ inch deep, furnished at advance on price of regular depth cases.

[illegible]

Mills Extra Strong Iron and Steel Case Cabinets

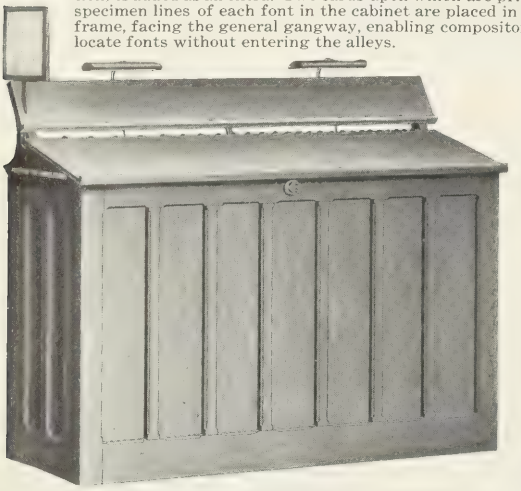
In addition to the irreducible minimum space occupied by these case stands or cabinets, they are the strongest and most durable made. The frame is made of extra heavy angle iron and the case runs are of heavy angle iron. The Working Bank and both Auxiliary Banks are made of steel, reinforced where necessary. The ends and back are of sheet steel. When a Contents Frame is added, it is made of steel. The color is olive green. As delivered the design will vary from that shown in the illustration, which is that of a cabinet of wooden construction.

The Mills Extra Strong Case Cabinets are sold with or without cases. When an office is being renovated it is not infrequently a desirable economy not only to save the cases in use but to save the cost of transferring type from old to new cases. The old cases can be cut out for finger holds by any local carpenter, and when transferred to these exceedingly strong, compact and attractive looking stands or cases the result is entirely satisfactory.

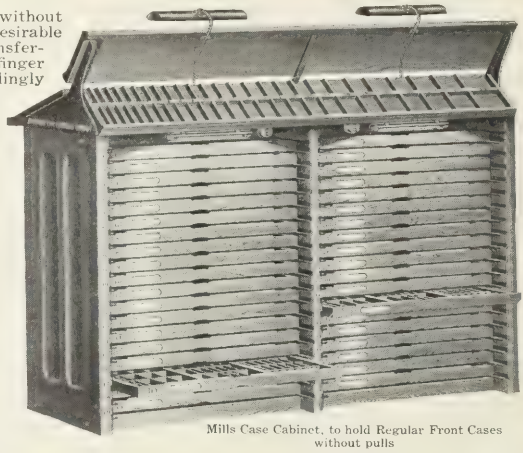
The illustration shows cabinet holding cases with regular fronts, which have been transferred from old style stands, and being placed close together, have been cut out at top and bottom of front rail, in centre, to afford finger holds for pulling out cases.

When this cabinet is ordered with cases, cabinet front California job cases are supplied, with boxes $1\frac{5}{16}$-inch deep, with bronzed pulls, as usual in other cabinets.

A Contents Frame (shown at left of the lower illustration) is added as an extra. Two cards upon which are printed specimen lines of each font in the cabinet are placed in this frame, facing the general gangway, enabling compositors to locate fonts without entering the alleys.



Mills Extra Strong Cabinet (working side) showing Auxiliary Bank, Linolite Lamps and Contents Frame



Mills Case Cabinet, to hold Regular Front Cases without pulls

On the working side there are a Working Bank and an Auxiliary Bank. On the latter, material for the work immediately in hand or quarter-cases holding auxiliary material of all kinds may be placed within easy reach. On the case side there is a bank on which leads and slugs are kept, convenient alike to compositors working in the alley or for compositors stationed elsewhere who enter the alley to use the cases.

The space occupied is the least possible that is required for holding and easily handling the cases. The runs project three inches beyond the cases, affording a secure hold when it is desired to set from them without removing them from their regular positions in the cabinet.

Special attention is invited to the method of lighting these stands or cabinets by means of Linolite Lamps, as shown in the illustrations. On a double stand or cabinet two Linolite Lamps are suspended on brackets over the Auxiliary Bank, on the working side, and two under the fore edge of the lead and slug case, on the case side, throwing light on any case that may be used to set from without removing from rack. These four Linolite Lamps are controlled by two switches, handily placed. (For description of the Linolite Lamps see page 1300.) Linolite Lamps are extra.

Single Cabinets occupy floor-space of $36\frac{1}{2}$x20 inches; depth over all, 24 inches; depth of Working Bank, 20 inches; depth of Auxiliary Bank, 9 inches; depth of Lead and Slug Bank, 8 inches; height to Working Bank, 44 inches; height over all, $56\frac{1}{4}$ inches.

Double Cabinets occupy floor-space of 72x20 inches; depth over all, 24 inches; depth of Working Bank, 20 inches; depth of Auxiliary Bank, 9 inches, depth of Lead and Slug Bank, 8 inches; height to Working Bank, 44 inches; height over all $56\frac{1}{4}$ inches.

Capacity of Mills Extra Strong Case Cabinets. (Dimensions are given in two preceding paragraphs)

Single Mills Extra Strong Cabinet, with runs for 20 full-size regular front cases, but without cases.
Single Mills Extra Strong Cabinet, with 24 full-size cabinet front California job cases, with boxes $1\frac{5}{16}$-inch deep, and bronzed pulls.
Double Mills Extra Strong Cabinet, with runs for 40 full-size regular front cases (as illustrated), but without cases.
Double Mills Extra Strong Cabinet, with 40 full-size cabinet front California job cases, with boxes $1\frac{5}{16}$-inch deep, and bronzed pulls.
Contents Frame, Linolite Lamps, Lead and Slug Bank, Label Holders, and Case Numbers are extra.
Prices on application. California job cases, with extra deep ($1\frac{1}{16}$*-inch) boxes can be furnished, if desired, at an advance on price of regular cases. These cases occupy same space in runs as regular cases.*

Extension Front Steel Case Stands

These stands are made to hold cases with regular fronts, such as body type pair cases; and they are recommended to those who, having an ample supply of regular cases, wish to discard old-fashioned and space-wasting case stands and racks, without being involved in the expense of new cases and the cost of transferring the type from the old to new cases. Case pulls may be applied to the old cases, or the front frames of the cases may be cut away in the center at top and bottom (as shown in the illustration above) to afford the necessary finger hold for pulling cases from the stand.

Extension Front Steel Case Stand No. 926. (With Cases)

The frame and runs extend four inches further than the cases, so that a case may be pulled out far enough to expose all the boxes, and type set from it, without removing it from the stand; or if it is desired to use a case which is too high or too low in the stand to set from with comfort, such case may be transferred to any other run in stand, and be securely held by projection.

Any style of iron bracket for holding cases, etc., or any style of working top manufactured by us, may be attached to the top of Case Stands Nos. 925, 926, and 928, which are all 43 inches high. The tops of these three stands are tapped with holes in which to screw the working tops.

As the sides and backs of these cabinets are of pressed steel, they are as dust proof as cabinets, except for the openings between the fronts of the cases.

The construction is strong, durable and attractive. The frame and interior supports are made of heavy steel; the top of reinforced steel; and the sides and back of pressed steel. Color, olive green.

Capacity and Dimensions of Extension Front Steel Case Stands

No. 925, to hold 20 full size-regular front cases in one tier; floor space, $21\frac{1}{2}$x35 inches; height, 43 inches.
No. 926, to hold 40 full-size regular front cases in two tiers (see illustration); floor space, $21\frac{1}{2}$x$69\frac{3}{4}$ inches; height, 43 inches.
No. 927, to hold 40 full-size regular front cases in one tier; floor space, $21\frac{1}{2}$x35 inches; height, $83\frac{1}{2}$ inches.
No. 928, to hold 60 full-size regular front cases in three tiers; floor space, $21\frac{1}{2}$x$103\frac{1}{4}$ inches; height, 43 inches.
Prices for above case stands on application. Cases not included unless separately ordered.

Mills Iron and Steel Head Letter Case Cabinets

This case cabinet is appreciated in the lively newspaper plants, in several of which it has proved to be very practical. If necessary (on a double Mills Case Cabinet) four cases may be put into convenient positions to set from, when a head contains four kinds of type—two cases on the Working Bank and two cases on the brackets below the Working Bank. The distance between the lower edge of the Working Bank and the cases on the brackets below is ten and three-eighths inches, making it entirely convenient to set out of the cases on the brackets, because they only project two inches beyond the Working Bank. Thus a man may set alternately from a case on the Working Bank and a case on the brackets without the slightest inconvenience. The projecting case brackets are hinged, and when not in use fold inwards, as shown at left of the illustration.

Mills Double Head Letter Cabinet, to hold 28 full size cases, and showing positions of Linolite Lamps

These cabinets are sold with and without cases. At a small advance on price of regular full size California job cases we supply California job cases with extra deep boxes (1$\frac{1}{16}$-inch). These cases occupy no more space in the racks than cases with boxes of regular depth. As projecting pulls are always inconvenient on cases which have to be used on the Working Bank, none are used, although the cases are set closely together, in order to economize space. Instead of pulls the front rail of each case is cut out at top and bottom in the center (as shown in illustration), affording ample finger hold for pulling the case out of the rack.

A galley rest, 4½x19½ inches, is placed at one end of each stand or cabinet, to hold standing heads or to dump on in case the Working Bank is covered with cases. The brackets which hold it are made to attach at either end.

The Auxiliary Bank is divided to hold leads and slugs, cut to measure from one to seven columns in length.

The frame is made of extra heavy angle iron, the runs of heavy angle iron. The Working and Auxiliary Banks are made of steel, reinforced where required, and resting on iron brackets. The ends and back are enclosed with sheet steel. In general, the construction is extra heavy throughout,—the strongest made,—and therefore suitable for the hardest kind of usage in newspaper plants. The color is olive green.

The space occupied is the least possible that is required for storing and the easy handling of the cases. The runs project three inches beyond the cases, affording a secure hold when it is desired to set from them without removing them from their regular positions in the cabinet.

The back of the cabinet and the Auxiliary Bank are flush, and may be set in close contact with a wall or another piece of furniture without wasting any space.

Special attention is invited to the method of lighting these cabinets by means of four Linolite Lamps, two on brackets overhanging the Auxiliary Bank and two located under the fore edge of Working Bank (as shown in illustration), lighting the cases on the brackets or in the racks. Linolite Lamps are controlled by switches, placed in handy positions on the cabinet. (For description of Linolite Lamps see page 1300).

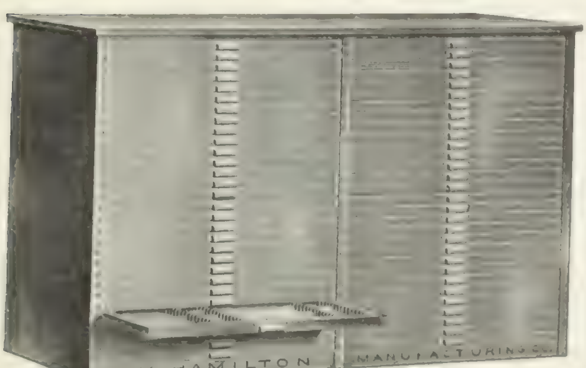
Capacity and Dimensions of Mills Head Letter Case Cabinets

Single, to hold 14 full-size California job cases. Length, 36½ inches; depth on floor, 20 inches; depth over all, 24 inches; depth of full length Working Bank, 20 inches; depth of full length Auxiliary Bank, 9 inches; height to Working Bank, 44 inches; height over all, 56¼ inches.

Double, to hold 28 full size California job cases. Length, 72 inches; depth on floor, 20 inches; depth over all, 24 inches; depth of full length Working Bank, 20 inches; depth of full length Auxiliary Bank, 9 inches; height to Working Bank, 44 inches; height over all, 56¼ inches.

Linolite Lamps and Case Numbers extra. *Prices on application. Cases are not included unless separately ordered.*

Steel Cut Cabinets, with Steel Cases



Steel Cut Cabinet No. 514A

These are the first all-steel cut cabinets ever made, and commend themselves on account of being more compact and space-saving than any other cut cabinets heretofore made, as well as minimizing the danger of loss by fire and by dust.

These cabinets are made with flush fronts (as illustrated) and also with extension fronts, and may be purchased with Indexed Steel Cut Cases or Plain (Blank) Steel Cases.

Cases in flush front cabinets have four-inch projections in rear, to hold cases securely on the runs when drawn out to expose all the contents. These rear projections are not required where the cabinets have projecting fronts, as described on page 1287.

Indexed Cut Cases are illustrated on page 1248 of this catalogue. To those who insist upon systematic care of cuts these Indexed Cut Cases are indispensable.

The construction is strong, durable and attractive. The frames and top and partitions are of reinforced steel. The cases are of heavy steel, capable of sustaining all the weight of metal-body cuts that can be placed in them. The backs are of pressed steel. Color, olive green.

Cases are all steel, with bronzed pulls, full size, 32¼x16⅝ inches over all. Case numbers and an indexed cut catalogue are included with cabinets containing indexed cases. Case numbers are extra when ordered with cabinets containing plain cases.

Contents and Dimensions of Flush Front Cut Cabinets

No. 510, with 30 plain cases; floor space, 21½x35 inches; height, 43 inches.

Steel Cut Cabinet No. 510A

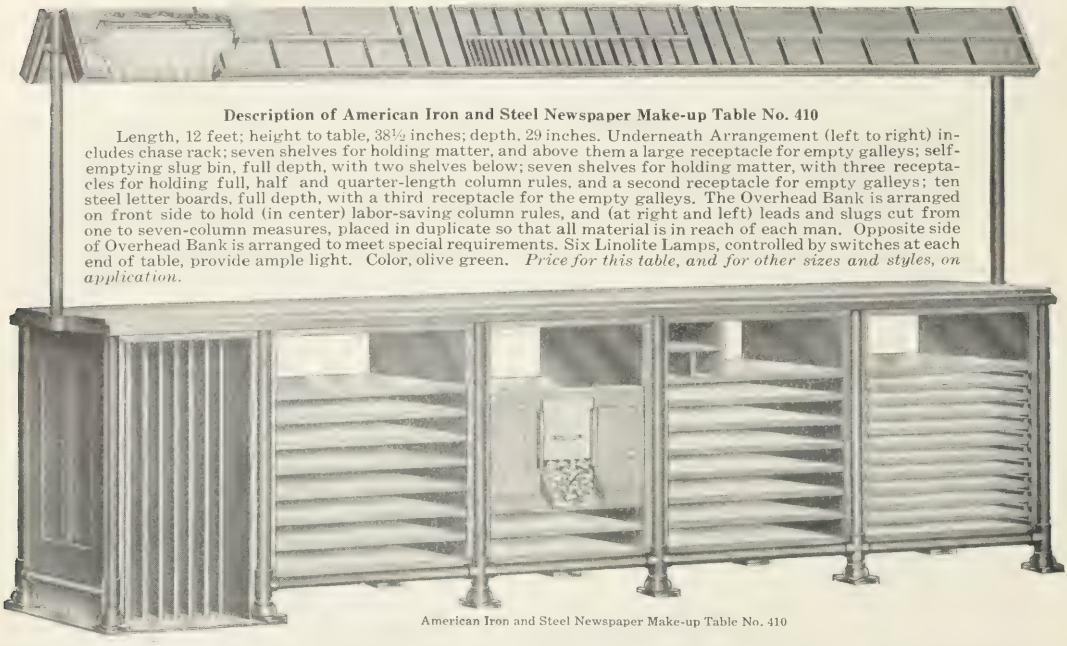
American Steel and Iron Newspaper Make-up Tables

In the larger and livelier newspaper plants the American Make-up Tables are superseding make-up tables on trucks because they undoubtedly afford facilities for quicker and more systematic work. In addition to their time-, labor- and space-saving merits, the construction is massive, giving unexcelled strength, rigidity and durability, withstanding the hardest usage.

This style of long make-up tables was first designed by Messrs. Oviatt and Clark, of the *New York American*, and first used on that newspaper, hence the name "American."

American Make-up Tables are made to order to any size desired, and with such disposition of the space under the table as may best meet the special requirements of each newspaper. The utilization of this space should be a matter of careful study, and the Efficiency Department (see pages 36, 37) of the American Type Founders Company is prepared to furnish suggestions based upon the experience of the majority of the leading newspaper plants using American Make-up Tables.

Two illustrations of American Make-up Tables now in use are shown on this page, and each is more particularly described within the halftone. Each table is twelve feet long. Attention is invited to the number of substantial supports upon which the iron top rests. These are necessary, owing to the tendency of very heavy iron tops to spring. An unstable make-up surface is an intolerable



Description of American Iron and Steel Newspaper Make-up Table No. 410

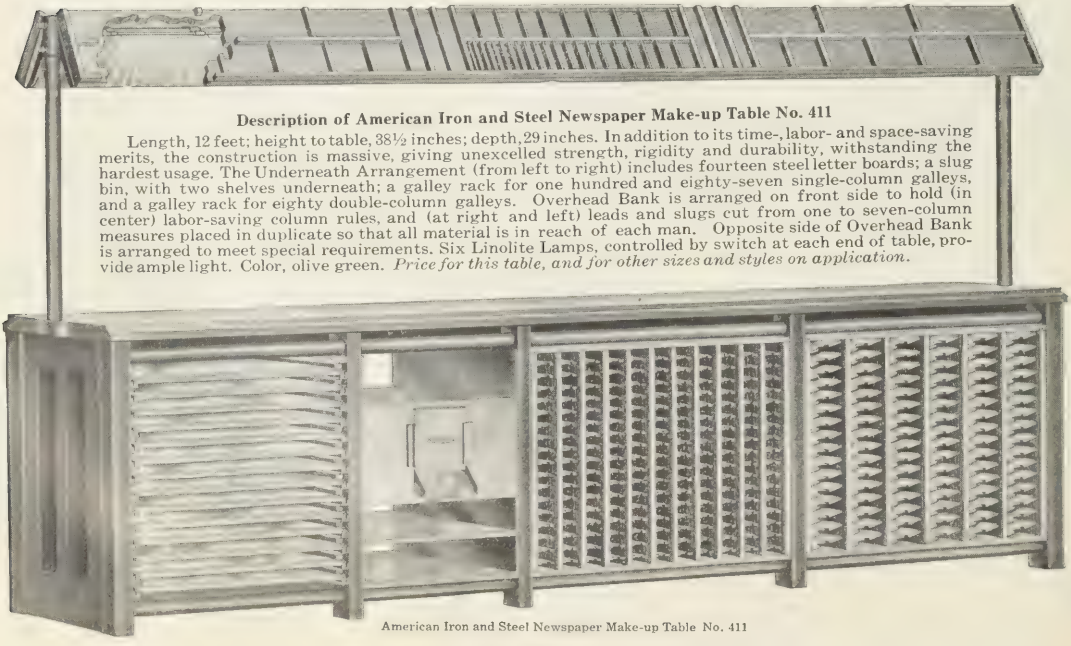
Length, 12 feet; height to table, 38½ inches; depth, 29 inches. Underneath Arrangement (left to right) includes chase rack; seven shelves for holding matter, and above them a large receptacle for empty galleys; self-emptying slug bin, full depth, with two shelves below; seven shelves for holding matter, with three receptacles for holding full, half and quarter-length column rules, and a second receptacle for empty galleys; ten steel letter boards, full depth, with a third receptacle for the empty galleys. The Overhead Bank is arranged on front side to hold (in center) labor-saving column rules, and (at right and left) leads and slugs cut from one to seven-column measures, placed in duplicate so that all material is in reach of each man. Opposite side of Overhead Bank is arranged to meet special requirements. Six Linolite Lamps, controlled by switches at each end of table, provide ample light. Color, olive green. *Price for this table, and for other sizes and styles, on application.*

American Iron and Steel Newspaper Make-up Table No. 410

nuisance. In selecting make-up tables following the idea original with Messrs. Oviatt and Clark, of the *New York American*, the matter of the number of supports is of great importance. No matter how much their omission may reduce the selling price, it is economy to buy tables having as many of them as the underneath arrangement will permit.

In the illustrations the Overhead Banks rest on iron supports at either end. In practice a twelve-foot Overhead Bank is supported in the center by a chain or wire from the ceiling. Any center support resting upon the make-up surface is to be avoided, as it materially interferes with the free use of the table. When desired the Overhead Bank is made by us to be suspended rigidly from the ceiling, which is the better method where practicable.

The lighting of the American Make-up Tables is perfectly done by means of Linolite Lamps (described on page 1300), and the



Description of American Iron and Steel Newspaper Make-up Table No. 411

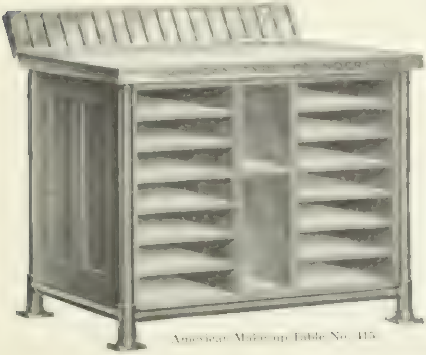
Length, 12 feet; height to table, 38½ inches; depth, 29 inches. In addition to its time-, labor- and space-saving merits, the construction is massive, giving unexcelled strength, rigidity and durability, withstanding the hardest usage. The Underneath Arrangement (from left to right) includes fourteen steel letter boards; a slug bin, with two shelves underneath; a galley rack for one hundred and eighty-seven single-column galleys, and a galley rack for eighty double-column galleys. Overhead Bank is arranged on front side to hold (in center) labor-saving column rules, and (at right and left) leads and slugs cut from one to seven-column measures placed in duplicate so that all material is in reach of each man. Opposite side of Overhead Bank is arranged to meet special requirements. Six Linolite Lamps, controlled by switch at each end of table, provide ample light. Color, olive green. *Price for this table, and for other sizes and styles on application.*

American Iron and Steel Newspaper Make-up Table No. 411

American Iron and Steel Make-up Newspaper Tables (Continued)

under sides of of the Overhead Banks are treated to reflect the light. The arrangement of Overhead Banks may be changed to suit local conditions. The Overhead Banks illustrated on preceding page are arranged to hold leads and slugs cut to 1, 2, 3, 4, 5, 6 and 7-column lengths and labor-saving column rules.

In the illustrations, bins for receiving dead slugs are shown; these are self-emptying into metal trucks, when the trap doors are raised. Some American Make-up Tables are made to receive metal trucks, under the tables, into which the dead slugs are thrown direct. As a rule we advise against putting drawers in make-up tables—they almost invariably become harbors for all sorts of materials which should not be in them, but they can be added when desired.



American Make-up Table No. 415

An important detail in our American Make-up Table is the rigidity of all letter and form shelves. Metal has more spring than wood, and in selecting a make-up table or any other piece of furniture containing letter and form shelves it will be profitable to look closely into this matter. A letter or form shelf which is not rigid is a constant source of annoyance and delay.

Specifications of two styles of these tables are printed, one within each illustration, on preceding page.

American Make-up Tables

These have proved very practical, especially when used in connection with Make-up Trucks. They can be furnished in any length, and the Underneath Arrangement may be varied to suit special conditions.

The table illustrated here has an iron top, supported in a strong iron frame. The fourteen galley shelves, the three galley bins (in centre) and both ends and the back are made of pressed sheet steel, reinforced where required. The Bank at the back is divided to hold the various lengths of leads and slugs commonly used on the publication. Linolite Lamps may be suspended over the Bank. Color, olive green.

Dimensions of American Make-up Table No. 415

Length, 48 ins.; depth, 28 ins.; height, 38½ ins. Linolite Lamps extra, if required. *Prices for this table and for other lengths and styles on application.*

American Steel and Iron Linotype Correcting Tables

In the larger plants it is desirable to use separate correcting tables. The American Correcting Table, No. 420, illustrated here, has been found very practical in a number of plants. This style of table can be furnished to order in any length, and the Underneath Arrangement may be varied. There are two openings in the top of the table; that at the left is for take slugs, which drop into the drawer below; that near the centre is for dead slugs, which fall into a large self-emptying dead slug bin built in the form of a chute, and closed by a trap door. These tables are also made with dead slug trucks which are placed under the opening in the tables.

The construction is designed to resist the hardest usage and maintain a good appearance. The top is of reinforced steel, supported by substantial iron legs, rigidly braced. The take slug drawer, dead slug bin and both ends are of steel. The ten shelves for holding loaded galleys are of reinforced steel. Color, olive green.

An overhead Linolite lighting arrangement may by added, if required, and is frequently desirable.

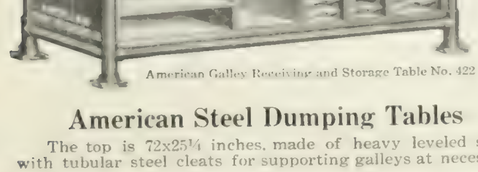
American Steel and Iron Linotype Correcting Table No. 420

Dimensions of American Correcting Table No. 420

Length, 84 ins.; depth, 28 ins.; height, 38½ ins. *Prices for this table and for other lengths and styles on application.*

American Galley Receiving and Storage Tables

These are made to any size, and the Underneath Arrangement may be varied. The table illustrated here is in use in several plants, and is very practical. The top is of reinforced steel, supported by a strong iron frame. The seven galley shelves are of reinforced steel; the three galley bins and the three galley racks (two for single and one for double-column galleys) and both ends are made of sheet steel. Color, olive green.



American Galley Receiving and Storage Table No. 422

Dimensions of American Galley Receiving and Storage Table No. 422

Length, 60 ins.; depth, 26 ins.; height, 38½ ins. *Prices for this table and for other sizes and styles will be quoted on application.*

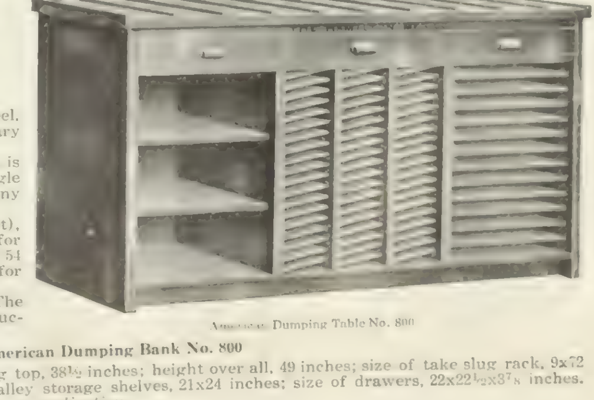
American Steel Dumping Tables

The top is 72x25¼ inches, made of heavy leveled steel, with tubular steel cleats for supporting galleys at necessary angle.

The take slug rack, held on brackets at rear of table, is of steel, and is (as shown in illustration) divided for single and double column measures, but may be divided to suit any special requirements.

The Underneath Arrangement includes (left to right), 3 steel drawers, each 22x22½x3⅞ inches; 3 steel bins for holding empty galleys; 3 tiers of steel shelves for holding 54 double column galleys; and 13 reinforced steel shelves for storing loaded galleys.

The construction is strong, durable, and attractive. The ends and all supports are of double steel in tubular construction, and the back is of pressed steel. Color, olive green.



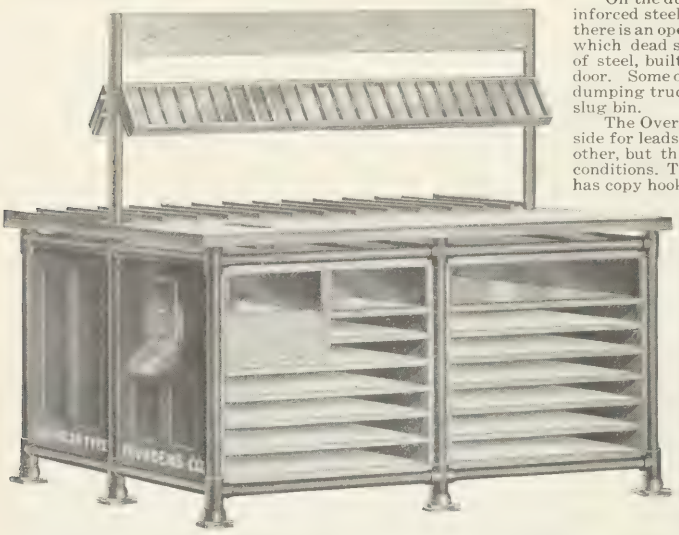
American Dumping Table No. 800

Dimensions of American Dumping Bank No. 800

Length, 72 inches; depth, 25¼ inches; height to working top, 38½ inches; height over all, 49 inches; size of take slug rack, 9x72 inches; size of galley bins, 20⅜x24x8½ inches; size of galley storage shelves, 21x24 inches; size of drawers, 22x22½x3⅞ inches. *Price for this table and for tables of other lengths and styles on application.*

American Combination Dumping and Correcting Tables

For plants using about ten machines or less these combination tables are very practical and convenient. They are made with a variety of Underneath Arrangements to suit special conditions in composing rooms.



American Combination Dumping and Correcting Table No. 450

On the dumping side, metal cleats are secured to the reinforced steel top to support galleys. On the correcting side there is an opening in the reinforced steel top of table through which dead slugs drop into a self-emptying slug bin, made of steel, built in the form of a chute, and closed with a trap door. Some of these tables are built to accommodate a metal dumping truck under the opening in the top, instead of the slug bin.

The Overhead Bank is usually divided on the correcting side for leads on one side and leads and take slugs on the other, but this arrangement can be varied to meet special conditions. The metal brace-bar above the Overhead Bank has copy hooks on both sides.

These tables are furnished (if required) with Linolite Lamps under Overhead Bank, the bank acting as a reflector and protecting the eyes from the glare. This is the best method of lighting now in use. It is described on page 1300. When Linolite Lamps are furnished they are attached and wired for connection.

The construction of this table is the best for the exceptional wear and tear of newspaper plants. The frame is made of one and a quarter inch iron pipe, the top and shelves and bins of reinforced steel, the Overhead Bank of heavy steel, and the ends of pressed steel. Nothing short of sledge hammer blows will injure equipments constructed in this manner.

In the table illustrated, No. 450, the Underneath Arrangement includes, on the correcting side (left to right), a steel self-emptying slug bin, and three bins for dead galleys and twelve shelves for matter, all of reinforced steel. On the dumping side there are steel bins for quoins and sidesticks, and two bins for dead galleys, and eight shelves, all of reinforced steel. The color is olive green.

Description of American Combination Dumping and Correcting Table No. 450

Length, 72 inches; depth, 54 inches; height to top of table, 38½ inches; height to copy hook bar, 68 inches. Linolite Lamps extra. *Prices for this table and for other sizes and styles on application.*

American Iron and Steel Dumping Banks

These Banks are practically indestructible. They are built any desired length, and the bank proper, take slug rack and Underneath Arrangement can be varied to meet special conditions in the composing room.

The frame is of one and one-quarter inch pipe, the top is made of sheet brass, with brass dividing strips, the take slug rack and copy hook bar are made of steel. The ends are of sheet steel.

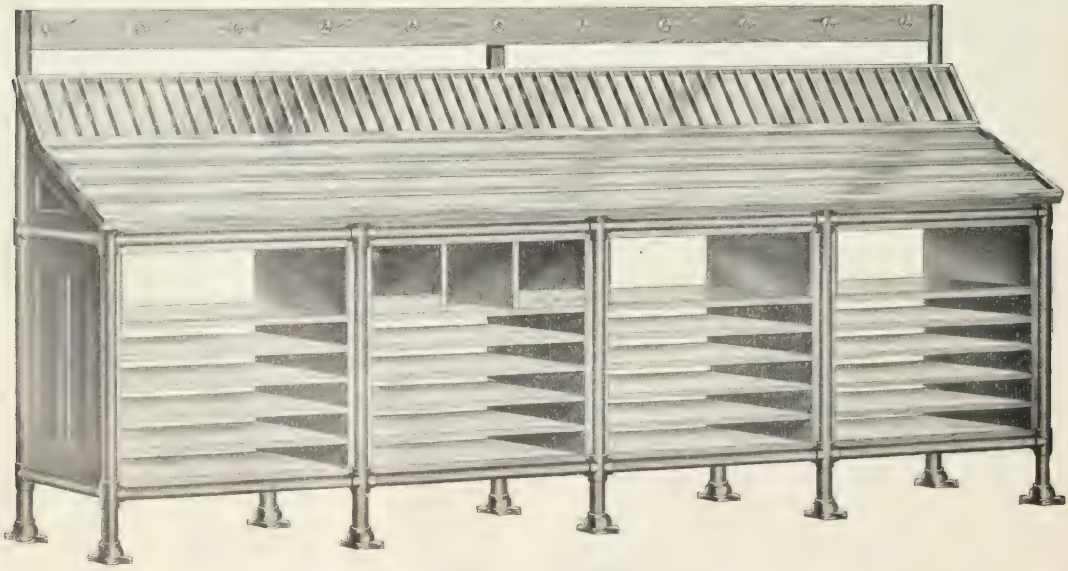
Particular attention is invited to the thorough support (consisting of five pairs of legs) provided for this bank. The cost would be considerably decreased by lessening this support, but when fully loaded these banks carry tons of weight, and in tables less well supported the bank itself and the storage shelves will sag and get out of line and gradually rack themselves to pieces. The manufacturers would very willingly reduce the cost of manufacture if it could be done without ultimate injury to the buyer's best interests.

These banks are also made to order, with removable letter boards, or galley racks, or blank steel cases for storing cuts, or page storage galleys, underneath the bank. In short, the Underneath Arrangements and the longitudinal divisions of the bank itself should be made to conform to the special conditions of each composing room. Linolite Lamps (as described on page 1300) may be placed on brackets and suspended over the bank. If the special conditions of a printing plant are detailed to the designers of the Efficiency Department of this Company, they will submit drawings showing such rearrangements of the bank here illustrated as may best meet the requirements of the buyer.

The Underneath Arrangement of the table illustrated here has three long steel-lined receptacles for holding dead galleys, three steel bins for holding quoins and sidesticks, and twenty shelves for storing matter, all made of reinforced steel.

Dimensions of American Dumping Bank No. 430

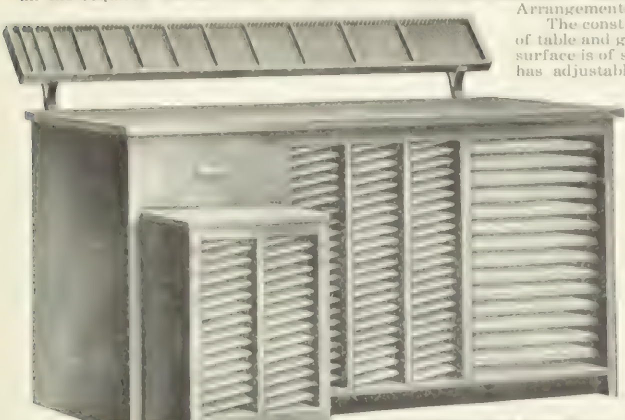
Length, 12 feet; depth, 22 inches; height to lower edge of bank, 42 inches; height to lower edge of take slug rack, 48 inches; height to copy hook bars, 67 inches; shelves, 26x21¾ inches. Linolite Lamps extra, if required. *Prices for this bank and for other sizes and styles on application.*



American Dumping Bank No. 430

Hamilton Steel Make-up and Storage Table No. 801

These tables are very practical for making-up the more intricate pages, such as Sunday edition matter. The make-up may have all the required matter under the table, including advertisements. These tables can be made any length and with Underneath Arrangements to suit special conditions.



Hamilton Steel Make-up and Storage Table No. 801

The construction is not only very strong, but is attractive. Frames of table and galley truck are of heavy steel, rigid and stable. The top surface is of steel. The bank is nine inches by seventy-two inches, and has adjustable division for leads, slugs, rules, etc., and is made of steel, brass-lined. The ends, back and drawer are of sheet steel. The galley shelves and the stationary storage shelves are of steel, properly reinforced. Color, olive green.

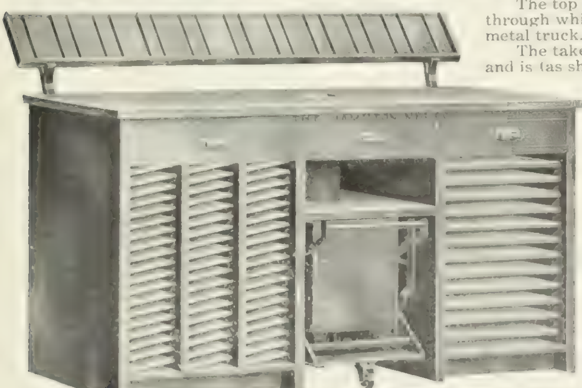
The Underneath Arrangement of the table here illustrated has (left to right) a drawer; a movable Galley Truck by means of which live or dead matter is conveyed quickly and easily in a wholesale manner from or to any department of a composing room; three tiers of double-column galley shelves, each holding eighteen galleys, fifty-four in all; and fifteen storage shelves. Linolite Lamps (described on page 1300) may be added on brackets overhanging the bank, if desired.

Dimensions of Hamilton Make-up and Storage Table No. 801

Length, 72 inches; depth, 25¼ inches over all; height to iron top, 38½ inches; height to top of bank, 49 inches; galley shelves accommodate double-column galleys; storage shelves, 21 inches wide and 24 inches deep; drawer, 5¼x19¾x22¼ inches over all; overhead bank, 9 inches by 72 inches. Linolite Lamps extra. *Prices of this and other sizes and styles on application.*

Hamilton Steel Linotype Correcting Table No. 802

Flat tables are generally preferred for correcting linotype matter. No one style of Underneath Arrangement can meet all conditions, but for many plants this table will be found practical and effective. Another style is illustrated on page 1291.



American Linotype Correcting Table No. 802

The top is 72x25¼ inches, made of heavy levelled steel, with an opening through which dead slugs are conveyed through a chute into a self-dumping metal truck.

The take slug rack, held on brackets at rear of table, is made of steel, and is (as shown in the illustration) divided for single and double column measures, but may be divided to suit any special requirements.

The Underneath Arrangement includes (left to right) 3 steel drawers, each 22x22½x3⅞ inches; 3 tiers of steel shelves for holding 54 double column galleys; a recess to accommodate a Hamilton Self-Dumping Metal Truck (described fully on page 1299); and 13 reinforced steel shelves for holding loaded galleys.

The construction is strong, durable and attractive. The ends and all supports are of double steel or tubular construction; the top and the storage shelves are of reinforced steel; the slug rack, back, drawers and galley shelves are of pressed steel. Color, olive green.

This table may be purchased with or without the Hamilton Self-Dumping Metal Truck.

Dimensions of American Linotype Correcting Table No. 802

Length, 72 inches; depth, 25¼ inches; height to working top, 38½ inches; height over all, 49 inches; size of take slug rack, 9x72 inches; size of galley storage shelves, 21x24 inches; size of drawers, 22x22½x3⅞ inches. *Prices for this table and for Hamilton Self-Dumping Metal Truck on application.*

American All-Iron Make-up or Transfer Trucks

American Three-Leg Make-up or Transfer Truck

Two styles are offered, each style at same prices. The strength, rigidity and stability of these trucks are unexcelled. They are practically indestructible. The swivel ball-bearing castors run easily and are easily guided. The Three-Leg Make-up or Transfer Trucks are more easily guided than any four-leg trucks. All trucks, unless otherwise ordered, are made 38½ inches high.

In ordering it is necessary to state whether three- or four-leg trucks are required.

American Four-Leg Make-up or Transfer Truck

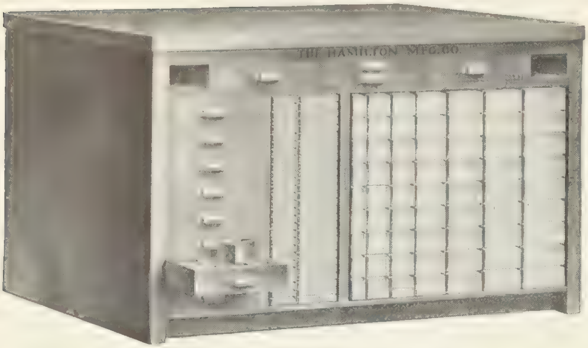
Hamilton Steel and Iron Imposing Table No. 726

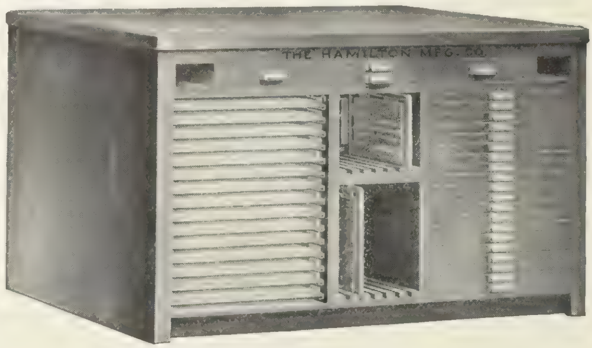


Hamilton Imposing Table No. 726 (see also view below)

The Underneath Arrangement of this table, as here shown in two illustrations, is remarkably comprehensive, convenient and labor-saving for commercial printing plants. The construction is very strong and durable, as well as attractive. The frame and chase racks are of heavy steel; the top of heavy iron; drawers of pressed steel; the removable letter boards, galley shelves and blank cases are of steel, reinforced where required to sustain heavy weights. Color, olive green.

Dimensions and Contents of Hamilton Imposing Table No. 726

Length, 63 inches; depth, 39 inches; height, 38½ inches. Fifteen removable letter boards, each 21¾ inches deep and 27½ inches long; two chase racks, one holding six chases, 10¼x14⅛ inches over all or smaller, the other holding six chases 14⅞x16½ inches over all or smaller; twenty blank cases for cuts, etc., each 21¾x16⅝ inches over all; eight drawers for sundries (immediately under the top), four on each side, four being 3¼ inches deep and four 1⅝ inches deep; eight sort drawers, each 17¾ inches long, 12$\frac{3}{16}$ inches wide, and 3$\frac{3}{16}$ inches deep, all fitted with removable pressed steel sort boxes (as shown in illustration); a font of labor-saving wood furniture, consisting of 1260 pieces assorted in widths as follows: Twenty-four each of 2- and 3-line; twenty each of 4-, 5-, and 6-line; sixteen each of 8- and 10-line, all widths cut to lengths of 12, 18, 24, 30, 36, 42, 48, 54 and 60 picas; and a font of labor-saving reglet consisting of 2072 pieces, half six and half twelve point, cut to lengths of 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 30, 33, 36, 39, 42, 45, 48, 51, 54, 57 and 60 picas. *Price on application.*



Hamilton Imposing Table No. 726 (another view)

General Merits of the Hamilton Imposing Table No. 726.

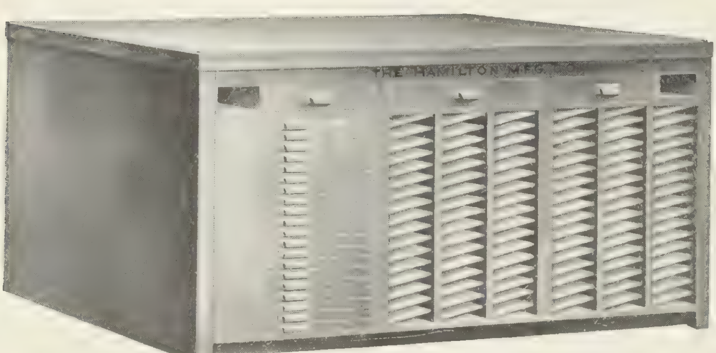
The steel and iron construction is not only stylish, but is easily kept clean and bright looking, and it also keeps the contents of the table clean. In printing offices the product is not acceptable if not clean; and it is a marvel how work is delivered in a clean condition, notwithstanding the unclean condition of some printing plants. Where the equipments and premises are not kept clean there is an inevitable increase of expense in getting the work delivered in a clean condition. The general movement toward profit-making efficiency will bring about a greater degree of cleanliness in all departments of the printing plant, and steel and iron constructions such as this Hamilton Imposing Table are aids to such increased cleanly efficiency.

Of course, all the steel and iron imposing tables have iron surfaces. Iron tops are ever so much better, smoother and more level, and will outlast marble twenty to one.

In commercial plants a supply of labor-saving wood furniture and labor-saving reglet under the table is especially economical.

The particularly labor-saving feature of the sort drawers shown in the upper illustration is found in the removable steel sort boxes, one for each character, each of which may be lifted out and easily filled or emptied.

Steel and Iron Imposing and Storage Table No. 725



Imposing and Storage Table No.725 (see also view below)

This very serviceable and capacious table is shown in two illustrations. The construction is strong, durable and attractive. The frame is made of heavy steel, the top is of heavy iron, and the drawers, galley shelves, blank cases and removable letter boards are of steel, reinforced where required to sustain heavy weights. Color, olive green.

Dimensions and Contents of Imposing and Storage Table No. 725

Length, 75 inches; depth, 51 inches; height, 38½ inches. There are forty-five letter boards, each 22½ inches wide and 20½ inches deep over all, giving a storage area of 350 square feet; twenty blank cases for cuts, etc., each 22$\frac{3}{16}$ inches wide and 21½ inches deep; six large drawers (three on each side); and shelves for ninety-six double-column full-length galleys. *Price on application.*

There can be no question that for much matter, whether dead or alive, the most convenient place for storing it is under an imposing table. If the matter so stored is alive, it is just where it can be quickly and easily lifted to the surface for locking up. If the matter so stored is dead, it is lifted (after unlocking) from the surface to the shelves quickly and easily.

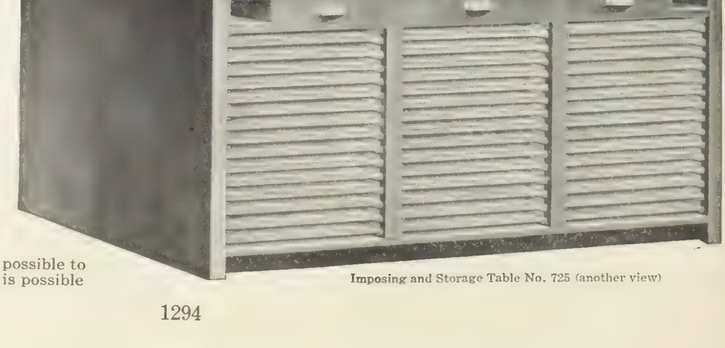
In breaking up forms on the imposing surface, any cuts or electrotypes therein are quickly and easily transferred to the blank steel cases.

When paged matter is made up on galleys, and tied up, two or more pages on a galley, the most convenient place to store them, ready for locking-up, is under the imposing table.

The six drawers afford the means of separating the various materials used by the stoneman, and enable him to have adequate supplies on each side of the table.

The four recesses, one at each corner, are suitable for holding mallets, planers, quoin keys, straight edges, and other appliances in constant use on imposing tables.

The use of steel letter boards makes it possible to put more of them in a given space than is possible when wood is used.



Imposing and Storage Table No. 725 (another view)

Mills Extra Strong Iron and Steel Imposing Tables

These are designed for use in the larger book and periodical plants, and are exceptionally strong and durable. There are two useful minor but characteristic features peculiar to these tables; at one end there are three bins for holding mallets, planers, benzine can, etc., and at the other end there is a receptacle (full depth of the table) for holding quoins and quoin keys.

Mills Extra Strong Imposing Table No. 723

The Underneath Arrangement includes 48 (24 on each side) extra substantial removable letter boards, on rollers, so that they can be moved with ease when loaded to full capacity. The runs on which these boards move are also extra heavy. There is a large open space under the imposing surface for holding any material in use in the work in hand, such as plates, sectional blocks, register hooks, or the furniture required in locking up.

The construction of the sides and central support is heavy cast iron, with longitudinal braces of heavy iron pipe. The top is heavy iron. The receptacle for materials is sheathed with steel. The letter boards are of heavy sheet steel, reinforced substantially, and rigid under the maximum weight which may be put on them. Color, olive green.

Dimensions of Mills Extra Strong Imposing Table No. 723

Length of imposing surface, 72 inches; depth, 48 inches; height, 38½ inches. *Price for this table and for tables of other lengths on application.* As delivered the design of this table will differ somewhat from illustration.

Steel and Iron Imposing Table No. 717

In many plants the Underneath Arrangement of imposing tables is best utilized for storing live or dead matter on removable letter shelves. This table has the maximum storage capacity possible in its area.

There are four tiers of heavy steel letter boards, two on each side, and each has 15 shelves, or 60 removable letter boards in all, affording a storage area of 230 square feet. There are also four capacious drawers, two on each side. The recesses at sides of the drawers are useful for holding mallets, planers, quoin keys, etc.

The construction is strong, durable and attractive. The frame is made of heavy steel, the top is of heavy iron, the drawers of sheet steel, and the removable letter shelves are of reinforced steel. Color, olive green.

Dimensions of Hamilton Imposing Table No. 717

Length, 63 inches; depth, 51 inches; height, 38½ inches. *Price on application.*

Hamilton Imposing Table No. 717

Imposing Table with Four Storage Trucks No. 727

Steel and Iron Imposing Tables With Storage Trucks

The special feature of this style of table is that the Underneath Arrangement is movable, consisting of four trucks, two holding removable letter boards and two holding galley cabinets. By means of these trucks live or dead matter can be conveyed to and from the imposing table quickly and easily.

The lower illustration is of the imposing table without the trucks. The legs and frame are of heavy steel, the top of heavy iron, and drawers of pressed steel. Color, olive green.

The trucks are of reinforced steel throughout, supported by strong angle iron platforms on four strong castors. No. 1 Storage Truck has twelve removable letter boards. No. 2 Storage Truck has forty-five galley shelves. There are four trucks, two of each style, and each is provided with two strong hand holds, by which it is easily directed. The arrangement of these storage trucks can be varied to suit special conditions. Color, olive green.

Dimensions of Imposing Table with Four Storage Trucks No. 727

Length, 60 inches; depth, 48 inches; height, 38½ inches; removable letter shelves in Truck No. 1, 24⅝ inches wide and 23 inches deep over all; galley shelves in Truck No. 2, take double-column full-length galleys; dimensions of Trucks, 27½ inches wide, 24¼ inches deep, and 27¼ inches high, over all. *Price for this table and for other sizes and styles on application.*

Steel and Iron Imposing Tables Without Storage Trucks

These tables (as illustrated here) meet conditions which only require the means of imposing forms. Storage Trucks may be added at any time, if required, or special form racks or other fixtures may be added as conditions develop or change.

The construction is strong, durable and attractive. The legs and frame are made of heavy steel; the top is of heavy iron; the drawers are of pressed steel. Color, olive green.

Showing Imposing Table without Trucks No. 730

Dimensions of Steel and Iron Imposing Tables Nos. 730 to 738 inclusive

No. 730, 24x36 inches over all; height, 38½ inches; capacity, two 6-column pages.

No. 731, 26x44 inches over all; height, 38½ inches; capacity, two 7-column pages.

No. 732, 28x50 inches over all; height, 38½ inches; capacity, two 8-column pages.

No. 733, 26x76 inches over all; height, 38½ inches; capacity, four 7-column pages.

No. 734, 28x80 inches over all; height, 38½ inches; capacity, four 8-column pages.

No. 735, 36x60 inches over all; height, 38½ inches; capacity, four 6-column quarto pages.

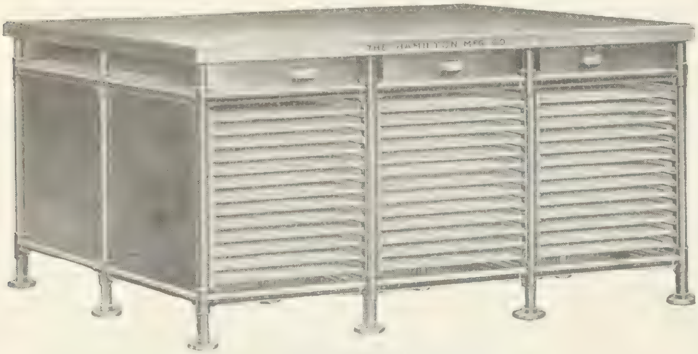
No. 736, 48x60 inches over all (as illustrated); height, 38½ inches; capacity, four 7-column quarto pages.

No. 737, 48x72 inches over all; height, 38½ inches.

No. 738, 40x80 inches over all; height, 38½ inches.

Hamilton Steel and Iron Imposing Tables No. 700

These are made any size and with Underneath Arrangements to suit special conditions. The construction is the strongest and most durable used in composing room equipments, practically indestructible, withstanding the hardest usage and always maintaining a good appearance.



Hamilton Steel Imposing Table No. 700

The frame is of one and three-quarter-inch iron pipe, strongly threaded at all joints; the top is of heavy iron; the ends and drawers of pressed sheet steel; the letter boards are of reinforced steel. Color, olive green.

The table here illustrated has six drawers (three on each side) and seventy-eight removable steel letter boards (thirty-nine on each side). At each end there is a recess for holding mallets, planers, and other implements where they may be readily reached.

Letter boards are well placed under imposing surfaces, whether for live or for dead or standing matter. If for live or dead matter, it is the most convenient place for transfer to and from chases.

The use of steel letter boards increases the capacity of this table, as more of them can be put in a given space than would be possible if wooden letter boards were used. The appearance of this table, its durability and its space-saving quality constitute strong arguments in favor of steel and iron construction.

Dimensions of Hamilton Steel Imposing Table No. 700

Length, 75 inches; depth, 51 inches; height, 38½ inches; letter shelves, 21½ inches wide and 23 inches deep. *Prices for this and other sizes and styles on application.*

Hamilton Steel Galley Cabinets

(*For other Galley Cabinets see page 1297*).

These are made any length and will be divided for any widths of galleys.

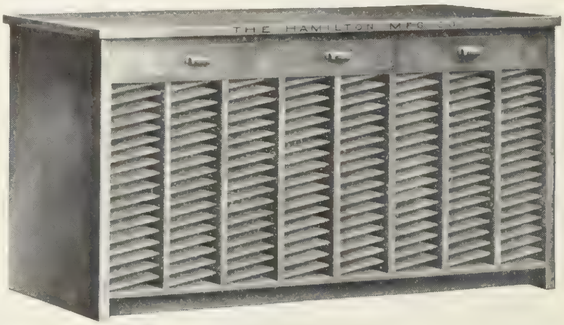
The galley cabinet illustrated here is 72x25¼ inches, and holds 136 full-length double column galleys, and has three steel drawers, each 23½x16x3½ inches.

The construction is strong, durable and attractive. The frame and top are made of reinforced steel, the drawers and back are made of pressed steel. Color, olive green.

The height is 38½ inches, which is convenient for using the top for correcting, etc.; or the top may be used for storage purposes.

Dimensions of Steel Galley Cabinet No. 655

Length, 72 inches; depth, 25¼ inches; height, 38 inches; size of drawers, 23½x16x3½ inches. *Price for this and for other sizes and styles on application.*



Steel Galley Cabinet No. 655

Hamilton Steel Page Storage Galley Cabinets

Steel Letter Board Cabinet No. 576

This cabinet holds 62 galleys, each 8½x11¾ inches inside. Other sizes of this useful cabinet are made to order.

When the cheapness and durability of pressed steel galleys are taken into consideration, together with the economy and convenience of carrying both live and dead matter on galleys rather than sliding the matter from and to movable letter boards (especially in the case of the smaller forms or pages) it will be found advisable to carry all such forms and pages on galleys, even if the full galleys are stored on the removable letter boards. Where there is a constant use of standard sizes of forms and pages, galleys can be made to fit such standard sizes, and cabinets (such as this one illustrated here) with runs instead of shelves to accommodate the galleys can be furnished, and will prove safe, space-saving, cleanly and convenient.

The construction of the Page Storage Galley Cabinet here illustrated is strong, durable and attractive. The frame and runs are of heavy steel, the sides and back of pressed steel. The galleys are also of pressed steel, and bottoms of standard galley thickness. Color, olive green.

Dimensions and Contents of Page Storage Galley Cabinet No. 660*

Capacity, 62 galleys, each 8½x11¾ inches inside. Height, 43 inches; width, 20¾ inches; depth, 13¼ inches. *Price for this cabinet and for other sizes on application.*

Steel Letter Board Cabinets

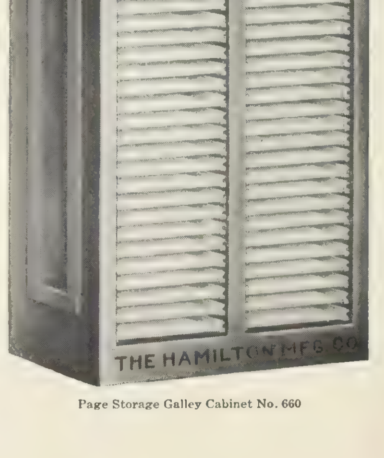
These cabinets are unexcelled for convenience and utility. They occupy little space and can be placed in the most advantageous positions in commercial plants.

The cabinet here illustrated has 22 steel letter boards, each 12x15 inches inside. The sides of the cabinet and the runs extend two inches beyond the letter boards, so that the latter may be pulled out to expose their entire contents without detaching them from the supporting runs. The construction is strong, durable and attractive. The frame and runs are made of heavy steel, the letter boards of reinforced steel, and the sides and back of pressed steel. Color, olive green.

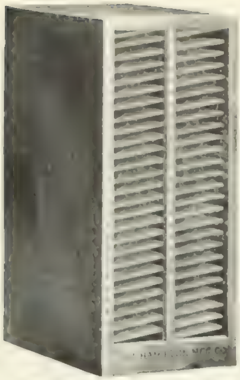
Dimensions and Contents of Steel Letter Board Cabinet No. 576*

Capacity, 22 letter shelves, each 12x15 inches inside. Height, 43 inches; width, 19 inches; depth, 15½ inches. *Price on application.*

**As made the sides will be without the panel effect shown in the illustration.*



Page Storage Galley Cabinet No. 660



Flat Top Galley Cabinet No. 650 to hold 50 galleys

Steel Flat Top Galley Cabinets

(For other Galley Cabinets see page 1296)

These useful cabinets very forcibly illustrate the space-saving advantages of steel construction. The two-tier cabinet illustrated here accommodates 50 double-column galleys in the same (a little less, in fact) space occupied by a cabinet of wooden construction holding 40 galleys. This is a capacity increase of twenty-five per cent. The increase in durability is much greater. These steel cabinets are indestructible in regular use.

Storage galleys are now so low-priced that in many plants it is found to be more economical and more convenient to store all standing matter on galleys in galley cabinets rather than on letter boards.

The construction, is strong, durable and attractive. The frame, top and supports are made of reinforced steel; the back and the shelves are made of pressed steel. Color, olive green.

Capacity and Dimensions of Steel Flat Top Galley Cabinets

No. 650, holds 50 double-column galleys, in two tiers. Height, 43 inches; width, 18¾ inches; depth, 24¼ inches.

No. 651, holds 100 double-column galleys, in four tiers. Height, 43 inches; width, 35 inches; depth, 24¼ inches.

No. 652, holds 150 double-column galleys, in six tiers. Height, 43 inches; width, 51¼ inches; depth, 24¼ inches.

Prices on application for above and other sizes.

Numbers on upright opposite each shelf are extra.

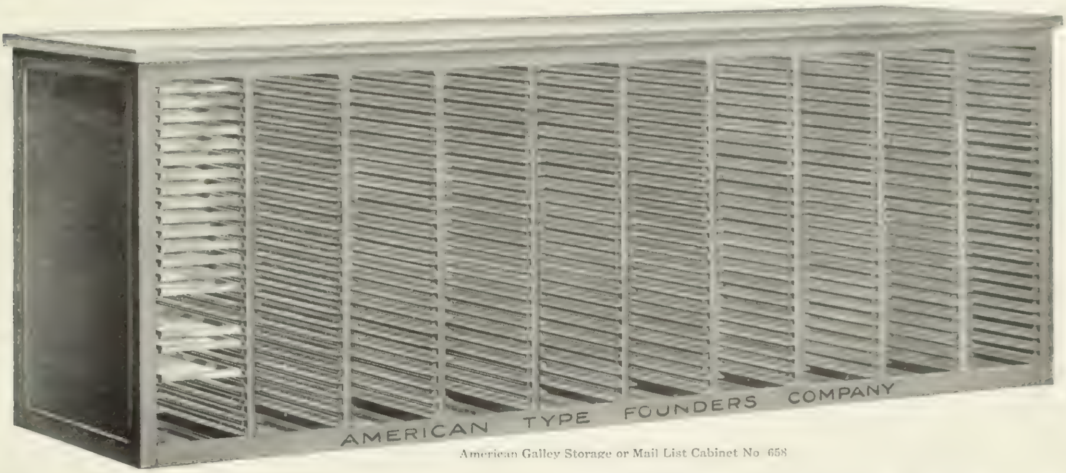
Galley Tops will be furnished when specially ordered, and are extra.

Other sizes and styles of Galley Cabinets will be found in our Catalogue of Steel and Iron Equipments.

Steel Galley Storage or Mail List Cabinets No. 658

These are made in a variety of sizes. The top is of reinforced steel, capable of sustaining great weight, the runs are of strong angle iron, the ends and back of sheet steel. Color, olive green.

These cabinets afford the most compact and safe method of storing mail lists or other matter. Metal galleys are now furnished at such moderate prices that the most economical way of storing live or dead matter is to keep it on galleys rather than letter boards, unless the forms are large.



American Galley Storage or Mail List Cabinet No 658

The regular height of these cabinets is 38 inches, the correct height for a working table, and the steel tops of these cabinets may be used for correcting or any other purpose for which a table is convenient. American Galley Storage and Mail List Cabinets can be furnished any height desired or to suit any width or length of galley.

The illustration is intended to show the construction and represent the large variety of such cabinets which can be supplied. The galleys are usually held flat with the matter secured in them, but the racks can be made to hold galleys at an angle suitable for storing unsecured matter.

Dimensions of American Galley Storage or Mail List Cabinet No. 658

Capacity, 250 double column galleys. Length, 9 feet 6 inches; depth, 26 inches; height, 38 inches. *Price of cabinet as illustrated and for other sizes on application.*

Wrought Iron Case Stands

These are made of wrought iron pipe, threaded together rigidly at all joints; the runs are made of angle iron; the galley rests are of steel. Very durable and well-appearing. No better case stands are made.

The prices listed below apply to stands holding full-size, quarter or Rooker size cases.

List Prices and Capacities of Wrought Iron Case Stands

In ordering it is necessary to state the size of cases the stands are required to hold.

No. 901. Single Stand, without runs	$ 9 00
No. 902. Single, with runs for 8 full cases (see illustration)	12 25
No. 903. Single, with runs for 8 full cases and galley rest	13 25
No. 904. Double Stand, without runs	14 30
No. 905. Double, with runs for 8 full cases	17 50
No. 906. Double, with runs for 8 full cases and galley rest	18 50
No. 907. Double, with runs for 8 full cases, galley rest and 16 galley racks	27 50
No. 908. Double, with runs for 8 full and 8 two-third cases	20 50
No. 909. Double, with runs for 16 full cases and galley rest	21 70
No. 910. Double, with runs for 8 full and 8 two-third cases, galley rest and 16 galley racks	30 00
Extra runs, attached, per pair	40

Wrought Iron Case Stand No. 902 shown with cases

Wrought Iron Case Racks

These are made of wrought iron pipe, threaded together rigidly at all joints; the runs are made of angle iron.

No. 911. Rack to hold 12 cases	$16 00
No. 912. Rack to hold 16 cases	17 00
No. 913. Rack to hold 20 cases	18 00
No. 914. Rack to hold 24 cases	19 00
No. 915. Rack to hold 30 cases	21 00
No. 916. Double Rack to hold 40 cases	36 25

Drying Rack and Stock Table No. 917

A very useful piece of pressroom equipment in commercial printing plants. The top serves for piling paper ready for the presses or for handling printed matter when ready for delivery. Underneath there are twenty-four large, strong steel drawers, each 30x30 inches and 1½ inches deep inside, with pulls on both sides, arranged to give ample circulation of air between them. These drawers may be pulled out of the rack on either side.

Drying Rack and Stock Table No. 917

Tables of other sizes are made to order, with or without drying racks. The Underneath Arrangement can be varied to suit all requirements. Bins or shelves can be substituted for drying racks.

The construction is strong, durable and attractive. The frame and central supports are made of heavy iron pipe rigidly threaded together at all joints; the top is of sheet steel, smooth, rigid and capable of sustaining great weight; the drawers are of wood, with steel fronts. Color, olive green.

The bottoms of the drawers have 1⅝-inch openings at 1⅝-inch intervals, to permit extra circulation of air through all the drawers.

Contents and Dimensions of Drying Rack and Stock Table No. 917

Contains twenty-four drawers, each 30x30x1½ inches inside; length of table, 69 inches; depth, 32 inches; height, 40 inches. *Price on application.*

Hamilton Steel Form Rack No. 935

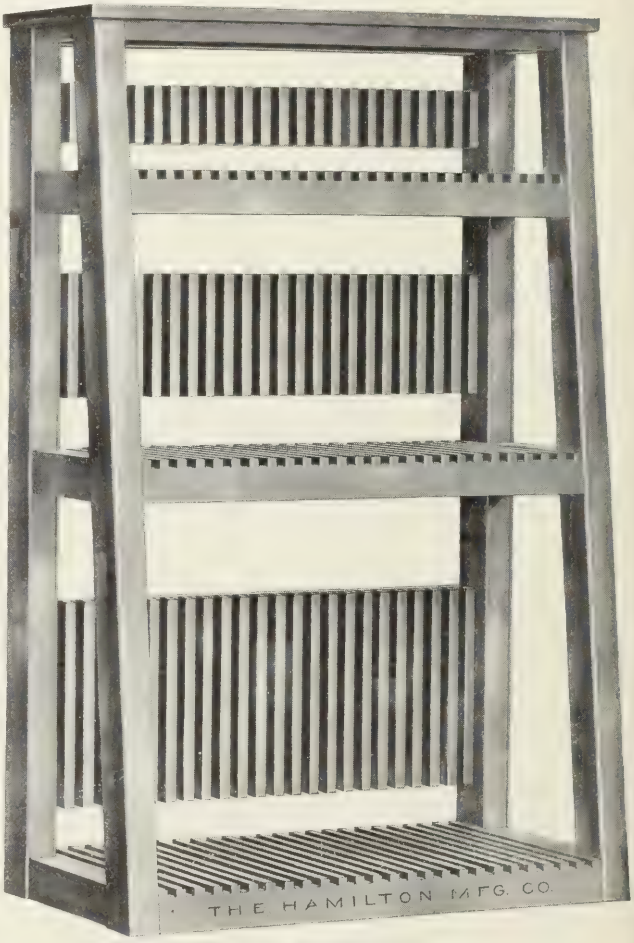
This Form Rack is a fine example of the printing office equipments of the future. In compactness, in the security with which it holds the forms, in the range of sizes of forms which it accommodates it leaves nothing to be desired. Added to this efficiency is practical indestructibility in its proper use. It is capable of sustaining much more than the maximum weight that can be put into it.

Another great feature is the ease with which it may be kept clean. Nothing is concealed. There are no hiding places for dirt.

The frame and racks are of heavy steel in tubular construction, rigid, strong, durable and attractive in appearance. Color, olive green.

Dimensions and Capacity of Hamilton Steel Form Rack No. 935

Holds 72 chases (24 in each rack); width, 54 inches; height, 6 feet 9 inches; depth, over all, 23 inches. *Prices for this Form Rack and for other sizes on application.*



Hamilton Steel Form Rack No. 935

Steel Bindery Work Tables

The accompanying illustration is to call attention to the fact that all sorts of printing plant equipment can be supplied by us in steel and iron, fire-proof and indestructible, and maintaining good appearance long after wooden equipments have gone into the furnace.

The top of the Steel Bindery Work Table here illustrated is of level reinforced steel; the frame of 1¼-in. iron pipe, strongly braced with the same material, all joints being threaded together, making a perfectly rigid and stable construction. They are also made with steel frames instead of pipe frames. The color is olive green.

Bindery equipments of this style are made to order to any specifications. The standard height of bindery work tables is 32 inches, but other heights can be furnished if preferred.

Dimensions of Steel Bindery Work Tables

No. 775, pipe frame; length, 6 feet; depth, 3 feet; height, 32 inches; approximate weight, 175 pounds.

No. 776, steel frame; dimensions same as those of preceding item; approximate weight, 125 pounds.

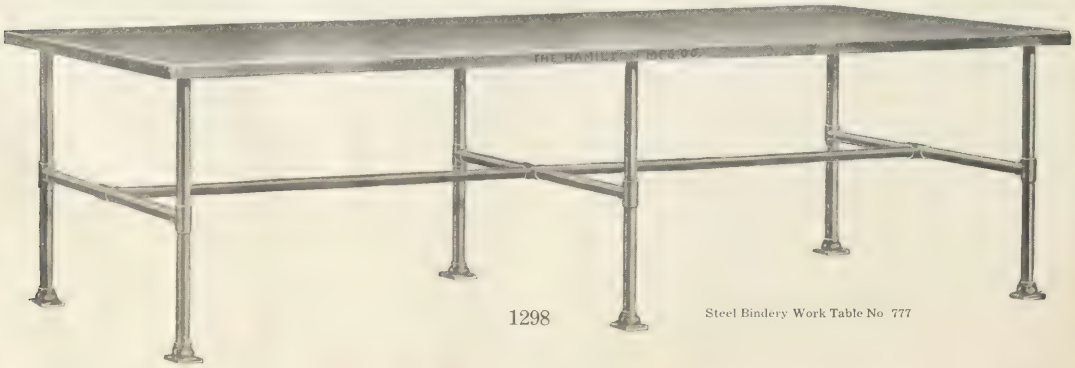
No. 777, pipe frame (as per illustration); length, 9 feet 6 inches; depth, 3 feet; height, 32 inches; approximate weight, 225 pounds.

No. 778, steel frame; dimensions same as those of preceding item; approximate weight, 175 pounds.

No. 779, pipe frame; length, 12 feet; depth, 3 feet 6 inches; height, 32 inches; approximate weight, 275 pounds.

No. 780, steel frame; dimensions same as those of preceding item; approximate weight, 220 pounds.

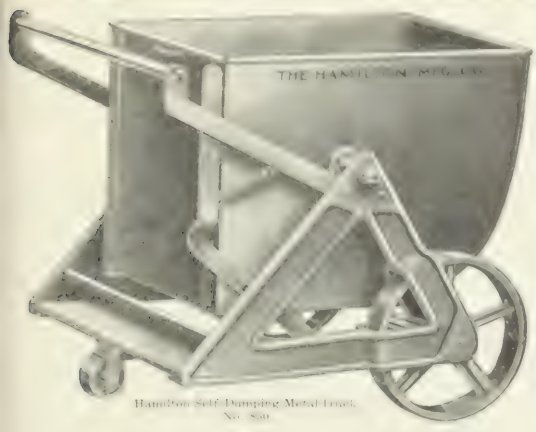
Prices for above tables and tables of other sizes on application.



Steel Bindery Work Table No 777

Steel Self-Dumping Metal Trucks

These two trucks were designed by men practical in handling material in newspaper composing rooms, with a view to economizing in time. The Hamilton is specially adapted for use under correcting and breaking-up tables, having chutes leading into the trucks. The American is better adapted for use with tables in which the dead slug bins are part of the tables. The construction of the American is such that it can be dumped clean with the least possible effort.



Hamilton Self-Dumping Metal Truck, No. 850

The economical feature is facility for self-dumping; any other style of trucks increases labor cost. The construction of both trucks is substantial and both are designed for maximum durability under rough usage.

American Self-Dumping Metal Truck has frame and box in one strong steel construction. The box is balanced on 8-inch wheels with oval-shaped tires and a swivel roller-bearing castor at the handle end. The other end is a strong door, held by two strong locking-levers. When receiving metal, these locking-levers are held securely by a pin in the side brackets which engages in a notch in each locking-lever. To empty the box, the levers are lifted about one inch by their handle-bar, and when the truck is so tilted the door is opened by the weight of the contents. When tilted the box is at a sharp angle, and all the slugs run out freely. The truck handle-bar is high enough to enable the operator to direct the truck without stooping.

Hamilton Self-Dumping Metal Truck has a frame of semi-steel, on castors with broad tires, controlled by a handle-bar, and easily directed. The box is made of heavily-riveted pressed steel, hung on a substantial shaft. The box is dumped very easily by disengaging the hand lever. When empty the box automatically recovers its upright position. Color, olive green.

American Self-Dumping Metal Truck No. 851

Dimensions of Steel Self-Dumping Trucks

Hamilton Self-Dumping Truck No. 850: length, 24¾ inches; width, 18¾ inches; height, 22¼ inches; all over all. *Price on application.*

American Self-Dumping Truck No. 851: length of box, 22 inches; width of box, 16 inches; height of box, 12 inches; height to upper handle-bar, 32 inches. *Price on application.*

American Matrix Tissue Holder

The object of this recent invention is to make it easy to paste up stereotype flongs quickly and easily and in better shape than can be done by the old method. This is the invention of a practical stereotyper, and it has proved very practical and popular wherever used.

American Matrix Tissue Holder with Matrix Roller in Use

This apparatus enables one operator to lay the tissue sheets smoothly and rapidly on the pasted matrix paper. The supply of tissue paper is held on the movable shelf A, under a rubber cover, which keeps it flat and clean. This shelf runs freely between eight grooved wheels at F. The matrix paper is kept on movable shelf D (see cut below). The matrix paper is pasted when on the marble top B; the operator draws the shelf B toward him as he stands at G, and releases one tissue, which he secures with his fingers on the near edge of the pasted matrix paper. He then lifts the matrix roller from the brackets GG and rolls tissue in the usual manner. As the matrix roller is pushed over the paper it draws the tissue down from the shelf A, and at the same time pushes the shelf A back. The tissue lies flat and unwrinkled, and is always squared with the other sheets of the flong.

The matrix paste is kept on movable shelf E. A paste-holder is provided, but no brush. The apparatus is on castors, so that it can be used in an advantageous position and returned to any little used place in the stereo department. The shelf A is in an iron frame, the top is marble, the frame of wood. The hand matrix roller is extra.

This apparatus is also furnished without the stand, with bracket for attaching to a beating table.

American Matrix Tissue Holder, Ready for Use

List Prices and Dimensions of American Matrix Tissue Holder

Length, when extended, 60 inches; length, when not extended, 42 inches; width, when extended, 62 inches; width, when not extended, 28 inches; height, to marble top, 36 inches. List price, with Paste Holder, but without Hand Matrix Roller and Brush	$85 00
Price without Stand, including only Shelf A and a Bracket for attaching to beating table	55 00
Hand Matrix Roller, solid iron, 20-inch cylinder (6 columns)	9 00
Hand Matrix Roller, solid iron, 22-inch cylinder (7 columns)	10 00
Hand Matrix Roller, solid iron, 24-inch cylinder (8 columns)	11 00
Stereotype Paste Brush	3 00

Weights: Matrix Tissue Holder, complete, 476 pounds; without stand, 150 pounds. Hand Matrix Rollers, 20-inch, 54 pounds; 22 inch, 60 pounds; 24-inch, 66 pounds. Stereotype Paste Brush, 1¼ pounds.

Flexityp Dry Cold Stereotype Flong

Flexityp Flongs are unexcelled for rapid results in getting press starters on the press. With them a good matrix is made in one minute. The operation is explained below. Flexityp Flongs are unexcelled among dry flongs, but dry flongs are recommended only where time and economy are the first considerations. All claims to the contrary notwithstanding, the properly prepared wet flong used expertly on efficient drying tables produces the better matrix.

Where "ad" matrices are exchanged Flexityp Flongs enable the users to produce a number of matrices as quickly and as easily as running off a corresponding number of proofs on a galley proof press.

Flexityp Dry Cold Stereotype Flong

The quality of stereotypes procurable from Flexityp Flongs is so good, the time saved by their use so important, the wear and tear of forms so reduced, and the comfort of stereotyping so greatly increased by eliminating the drying tables (especially in hot weather), that an increasing number of publishers prefer to stereotype by this method entirely. The daily newspaper with the largest circulation in Great Britain has discarded drying tables in favor of dry cold flongs. The leading newspapers of Germany (where this invention originated) have very generally discarded drying tables. In America the progress of dry cold flongs has been retarded by ignorance of the correct method of using them. Matrix Rolling Machines, which are ordinarily geared to pass over the form in five seconds, must be re-geared to pass over the form at the very slow speed of thirty seconds. It is essential to give ample time to make the impression, and it is essential to use the right kind and right thickness of felt blanket, and ample pressure. All these conditions being right, there will be no difficulty in procuring stereotypes of uniform good quality from Flexityp Cold Stereotype Flongs.

Consider the collateral advantages: The form is never heated. As soon as the impression is taken (or a number of impressions) the form is returned for make-overs, and can be handled immediately, instead of being excessively hot, as it often is when it leaves the drying tables. The forms may be moulded a number of times in succession, at intervals of forty-five seconds, so that starters may be put into a number of boxes almost simultaneously. It is possible to get one press started in a minute and a half after closing the last form. Many newspapers which make a specialty of late baseball news have been doing this constantly for four or five years. When a number of forms reach the stereotyping room together, a few minutes before the edition closes, Flexityp enables them to be handled with the greatest ease and without delaying the presses.

Where the wet flongs and drying tables are preferred, Flexityp may be used as an auxiliary for use in emergencies, such as receipt of news important enough to stop the presses, or when frequent make-overs are necessary.

Directions for use are furnished with the first order. When the form reaches the matrix rolling machine the Flexityp Flong is laid on (smooth side on type) and covered with a moulding blanket of good quality and a rubber blanket; then run very slowly (thirty seconds at least) under matrix roller. Trim at head and sides only; bake bone-dry in dryer; cut tail at gauge and apply packing where necessary; dust with French chalk, and cast. If a large number of casts are required rub the matrix with cocoanut oil after half a dozen casts.

Prices and Dimensions of Flexityp Dry Cold Stereotype Flongs

Size, 19x25 inches. Minimum quantity sold is one dozen.

List Prices, per sheet; lots of 12, at **40** cents; not less than 25, at **37½** cents; not less than 50, at **35** cents; not less than 75, at **32½** cents; not less than 100, at **30** cents; lots of not less than 200, **27½** cents. Directions gratis with first order.

Linolite System of Lighting

We have adopted the Linolite System of Lighting for such equipments as require to have lights attached to them, on account of the superior diffusion of light as compared with bulb lamps. A Linolite Lamp (see Fig. 1) is literally a *line of light*. It is an improvement on the ordinary bulb lamp. In the bulb lamp there is a coil of filament through which the electric current enters and leaves at the same end. In the Linolite Lamp a tube nearly a foot long is substituted for the bulb, and the electric current enters at one end of it and comes out at the other. It is self-evident that the light is diffused over a larger area by the tube, and, in addition, the extent of reflection by means of reflectors is much more than proportionately increased. Linolite Lamps are used exclusively in reflectors, and they can be removed from a reflector and replaced in a second or two. The position of a Linolite Lamp in its Reflector is shown in Fig. 2.

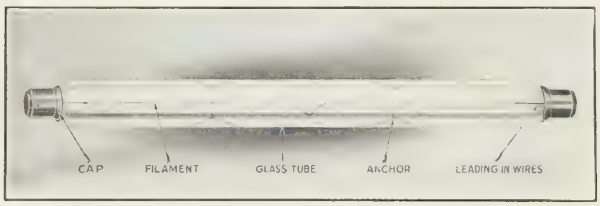


Fig. 1. A Linolite Tubular Carbon Lamp

The Reflector also effectively protects the eyes from the glare of the lamps.

For composing room equipments two kinds of Linolite Reflectors are used. Where the light is to be diffused downward and laterally in all directions (as, for instance, in the American Make-up Tables shown on page 1290) the Type A Reflector (Fig. 3) is used. Except where cabinets, banks and tables are placed against the wall, Type A Reflectors are used, as shown on Mills Extra Strong Cabinets on page 1288. When any equipments requiring overhead lighting are placed against a wall, or when it is required to light cases in racks of cabinets or shelves in the underneath arrangements of tables, etc., then Type L Reflectors (Fig. 4) are used, because they diffuse the light downward and outward toward the compositors or make-ups, and do not waste it on the wall.

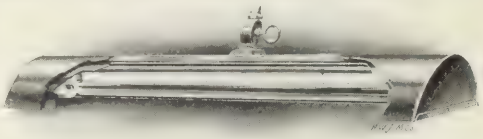

Fig. 2. Single Linolite Lamp in Reflector (Sectional View)

Linolite Reflectors are sold by the foot, in units of twelve inches, at the same price per foot, whether holding one or several lamps. If a continuous line of light (i. e., lamps) is not required in a reflector the lamps may be placed in a reflector with any desired intervals between them. There is no limit to length of reflectors. Linolite Lamps are easily taken from and replaced in the reflectors.

List Prices of Linolite Reflectors and Lamps

Type A Reflector for one lamp, with clip for attaching to bracket, but without bracket	$4 00
Type A Reflector for two or more lamps (Fig. 3), with clips for attaching to brackets, but without brackets, per foot	4 00
Type L Reflector for one lamp, with clip for attaching to bracket, but without bracket	5 00
Type L Reflector for two or more lamps (Fig. 4), with clips for attaching to brackets, but without brackets, per foot	5 00
Linolite Tubular Lamp, carbon filament (Fig. 1), for 100 to 125 volts, 16 candle power, each	1 00
Linolite Tubular Lamp, tungsten filament, 25 watts, 20 candle power, 25-32 volts, each	2 25
Linolite Tubular Lamp, tungsten filament, 35 watts, 28 candle power, 25-32 volts, each	2 50

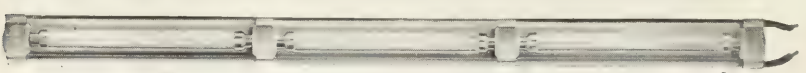

Fig. 3. Type A Reflector, with Three Lamps, showing reflecting area, which in use is hidden from the eyes

Fig. 4. Type L Reflector, with Four Lamps, showing reflecting area, which in use is hidden from the eyes

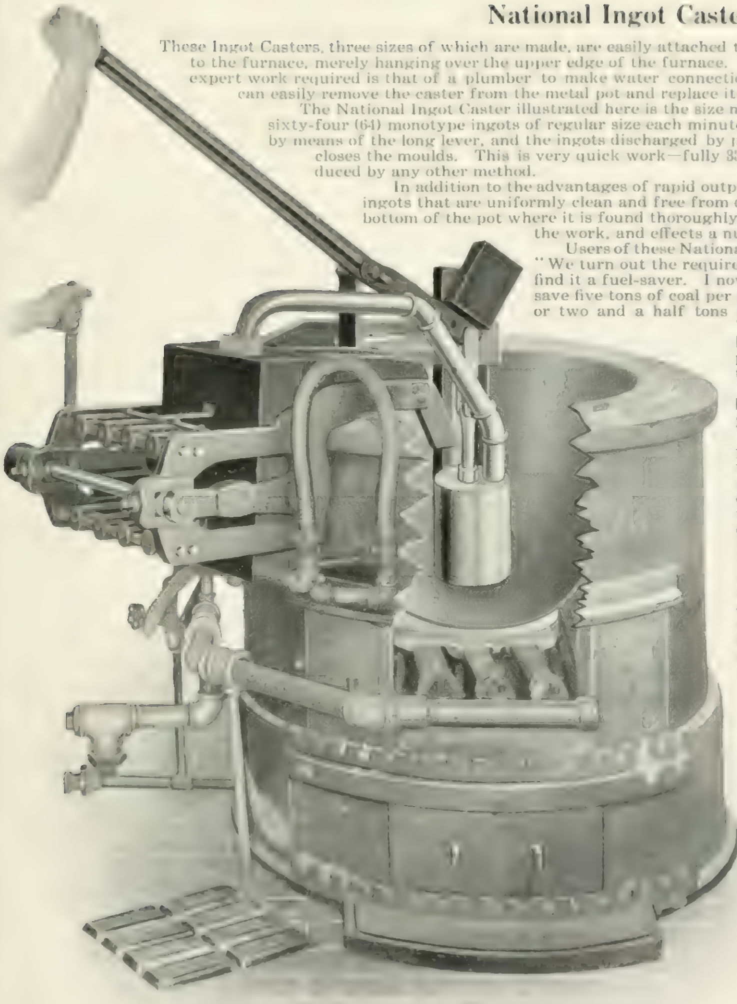
These prices for unattached Reflectors and Lamps are subject to liberal discounts.

Brackets and all other means of attaching to Cabinets, Banks, etc., and wiring for connection are extra, and are included in the prices listed with each kind of equipment requiring Linolite Lamps.

Wherever in a printing plant the light requires to be concentrated the use of the Linolite System is recommended.

The money value of efficient lighting in composing rooms is too little appreciated. The work of the compositors cannot be done so quickly or so efficiently in composing rooms which are imperfectly lighted. The more diffused a light is the nearer it approximates sunlight on banks, tables, imposing tables, and case stands. All lights on such equipments should be concealed in reflectors. The reflectors diffuse the light naturally, and protect the eyes from the blinding effects of unprotected electric lamps.

National Ingot Casters



These Ingot Casters, three sizes of which are made, are easily attached to any metal furnace, without being connected to the furnace, merely hanging over the upper edge of the furnace. In attaching them to metal furnaces the only expert work required is that of a plumber to make water connections, as the mould is water-cooled. Two men can easily remove the caster from the metal pot and replace it as easily.

The National Ingot Caster illustrated here is the size most in use. It casts thirty-two (32) linotype or sixty-four (64) monotype ingots of regular size each minute, the fluid metal being pumped into the moulds by means of the long lever, and the ingots discharged by pulling back the short lever, which opens and closes the moulds. This is very quick work—fully $33\frac{1}{3}$ per cent quicker than ingots can be produced by any other method.

In addition to the advantages of rapid output, there is the greater advantage of producing ingots that are uniformly clean and free from dross. The metal is always pumped from the bottom of the pot where it is found thoroughly mixed. Clean metal improves the quality of the work, and effects a number of important indirect savings.

Users of these National Ingot Casters report very favorably on them: "We turn out the required number of ingots in one-fifth the time." "I find it a fuel-saver. I now cast once a week, instead of every day, and save five tons of coal per year." "We cast an average of 1,200 ingots, or two and a half tons of metal a day, and the saving is immense." "Casting our ingots formerly required several hours of one man's time each day. We now produce the same number, of better quality, in twelve minutes."

Three sizes are made, as per particulars below. These casters are in use in over fifty plants.

As furnished, the National Ingot Casters produce linotype ingots $6\frac{3}{8} \times 2\frac{1}{2} \times \frac{5}{8}$ inches, weighing 3 pounds. This size has been adopted because it is better than the old size. It casts quicker. As shown in Fig. 1, the long, thin ingot is put into the metal pot without splash or danger of burning the hand. As shown in Fig. 2, the long, thin ingot stands better in the ingot holder, which is thus made to carry nearly twice as much metal as formerly. If specially ordered the ingot moulds are made to cast $6\frac{3}{8} \times 2\frac{1}{2} \times \frac{1}{2}$ inches (weight of ingot, 2 pounds), or any other thickness up to $\frac{7}{8}$ inch, without extra charge. Other shapes are made to order at reasonable extra charges.

As furnished, the National Ingot Casters produce monotype ingots $3 \times 2\frac{5}{8} \times \frac{3}{4}$ inches, weighing $1\frac{1}{2}$ pounds, which is the size and weight recommended by the manufacturers of the monotype machines.

National Ingot Caster Attached to Metal Furnace

Fig. 1. Shows convenience of long linotype ingot, which is slid into pot without splashing

The National Ingot Caster may be operated with metal pots of one ton and greater capacity.

The Junior National Ingot Caster may be operated with metal pots of 500 pounds and greater capacity. An illustration of this apparatus will be sent on application.

The words "Mono" and "Lino" are inserted in the moulds without extra charge, if request is made when order for caster is placed.

A short name or initials of users will be put in the mould, for which an extra charge is made.

Prices and Particulars of National Ingot Casters

Junior National Ingot Caster, for plants using five or six machines	$100 00
National Ingot Caster, the size most used, as illustrated	200 00
National Ingot Caster No. 4, for largest newspaper plants and plants in which a caster is used continuously, metal merchants, etc.	300 00
Extra for inserting initials or short name in linotype ingot mould	18 00

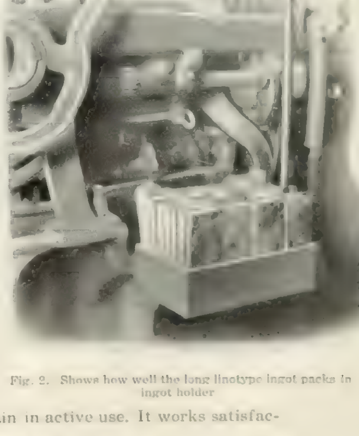

Fig. 2. Shows how well the long linotype ingot packs in ingot holder

The Government Printing Office at Washington, D. C., is using four No. 4 National Ingot Casters.

National Ingot Casters are in use in the following well-known plants: *Globe*, Boston, Mass.; *Enterprise*, Brockton, Mass.; *Times*, Brockton, Mass.; *Daily Evening Item*, Lynn, Mass.; *Evening News*, Salem, Mass.; *Republican*, Springfield, Mass.; Phelps Publishing Co., Springfield, Mass.; *Journal*, Providence, R. I.; *Times*, Pawtucket, R. I.; *Free Press*, Burlington, Vt.; *Courier-Citizen*, Lowell, Mass.; *Globe* (2), Herman Feinberg and Wm. B. Dana Co., New York City; *Herald*, Syracuse, N. Y.; *American*, Baltimore, Md.; *North American*, Philadelphia, Pa.; *Star*, Toronto, Canada; *Telegram*, Toronto, Canada; Canada Metal Company; *Spectator*, Hamilton, Canada; *Times-Star*, Cincinnati, Ohio; *Post-Despatch*, St. Louis, Mo.; *Bee*, Omaha, Neb.; *Star*, Kansas City, Mo.; *Herald*, Salt Lake City, Utah; *Star*, Los Angeles, Cal.; *Call*, San Francisco, Cal; *Oregonian*, Portland, Ore.; *Spokesman-Review*, Spokane, Wash.

The Times-Mirror Co., Los Angeles, Cal., writes: "The Ingot Caster which we purchased from you prior to October 1, was salvaged from the wreck of the *Times* building, and is now again in active use. It works satisfactorily, and is a labor-saving as well as a time-saving apparatus."

The Boston *Globe's* superintendent of stereoptying writes: "One metal is used in this entire plant. Your Ingot Caster has been used under my supervision for the past three months, and has given entire satisfaction. We cast an average of 1,200 ingots, or two-and-a-half tons of metal each day. The ingots are convenient in size and shape."
